Lancaster Farming

VOL. 30 No. 15 | Six Sections | Lancaster Farming, Saturday, February 16, 1985 | $7.50 per Year

American Farm Bureau President Robert Delano discusses agricultural policy with Pennsylvania Farmers' Association President Keith Eckel, following PFA's County President's Conference Wednesday in Mechanicsburg.

Market, Not Politics, Must Set Prices, Delano Says

BY JAMES H. EVERHART

MECHANICSBURG — The nation needs a farm policy influenced by the market, not by political considerations, American Farm Bureau President Robert Delano told a Pennsylvania Farmers Association meeting here Wednesday.

"There are just two ways to make sure production matches market usage," Delano told the PFA Presidents Conference. "One is to allow supply-demand signals to get through to farmers and ranchers through the market. The other is to allow government to use mandatory production controls to do the same job."

The Government's intervention alternative, he added, is "the surest way to wreck commercial agriculture."

Delano specifically pointed out the federal farmer-held reserve, which, he said, raised grain prices a few cents a bushel, while causing price problems later.

His organization, he added, wants to eliminate or phase out the reserve, to "avoid the political temptation to enhance prices by building up the reserve," he said.

In followup questioning by Lancaster Farming, Delano said he supports a market-oriented price support program similar to the one used for soybeans. He said he expects Congress to enact a system in which price supports are tied to a percentage of the three- or five-year moving market

And, in response to a question from one of the 31 county presidents attending the conference, Delano indicated that a similar market-oriented approach should be applied to milk pricing as well. He does not, he said, support extension of the dairy diversion program.

Much of the recently publicized crisis in American agriculture could be resolved, he added, if pricing was more realistic and market-oriented.

"If the support price is set at the proper level, you won't see defaults," he concluded.

The major threat facing American agriculture — and the rest of the American economy — he told the group, is the federal budget deficit.

Currently, he said, the deficit is chewing up about 75 percent of net domestic savings, and driving up interest rates to levels which are "far above one of the usual monetary guideposts, the rate of inflation."

Many farm organizations have gone bankrupt as a result, he said.

To impress Congress with the Farm Bureau's stand on the issue, he said, the group has organized a "Balanced Budget Brigade" that is asking Congress to balance the federal budget by cutting federal spending and not by raising taxes.

"Our group makes it very plain that attempting to balance the budget by increasing taxes would do just the opposite of what needs to be done. New taxes large enough to affect the deficit would increase interest rates, reduce disposable income and lower standards of living."

The group, he said, delivered two van loads of signed cards - from about one million individuals - calling on the President and Congress to balance the federal budget.

Agriculture, he said, must do its part, too.

"We are in trouble with the public because of the high costs of last year's farm program," he said. "The deficit has put pressure on the budget, pressure that many of us have helped to generate. It is obvious that we cannot ignore this anti-spending and anti-tax pressure by allowing costly sur-

Extension adds manure mgmt. specialist

BY WENDY WEHR

LANCASTER — At most annual meetings of the county Extension associations, reviewing the program and staff accomplishments of the past year is the main order of business. But at the Lancaster County Annual Extension Association meeting on Thursday night, the focus turned to the upcoming year and the addition of a staff member to help farmers cope with the manure management problems of the Chesapeake Bay watershed.

James McKeehen, Southeast Region Administrator for Penn State Extension, announced the appointment of a project associate for manure management. Mitchell Woodward, an agronomist and agricultural specialist, has accepted the position of aiding farmers with the burgeoning waste management problems in the Southeast.

Woodward, who grew up on a dairy farm outside of Middletown, Delaware, earned his master's degree in agronomy and extension education from the University of Maryland. Currently working as an agricultural representative for the DuPont Corporation in North Carolina, Woodward says his concerns remain with the farm communities and peoples of the Chesapeake watershed.

"My great grandfather was a waterman," says Woodward. His family background and concern for the farmers of southeastern Pennsylvania will help him as he begins his new duties in March

Controlling pollution in the Chesapeake Bay is important, whether it's animal waste, chemicals, or whatever," remarks Woodward. "Manure management is a big problem. If we can control it somehow, maybe we can hold back on some of the government regulations."

While Woodward will be working out of the Lancaster Extension office, he will be aiding farmers in all the southeastern counties where there are manure management problems "I will work in the Susquehanna River valley where there is the largest concentration of dairy," sums up Woodward.

Lancaster Farming Names New Editor

LITITZ — Lancaster Farming is pleased to announce the appointment of James H. Everhart as managing editor.

A Lancaster native, Everhart is a graduate of Conestoga Valley High School and Franklin and Marshall College.

He has 14 years experience as a writer and journalist, including nine years at The York Dispatch in York.

At the Dispatch, Everhart won a variety of state and national awards, covering a wide range of social and environmental issues, land use and municipal government topics.

After leaving York, he served as a newsman at The Associated Press in Albany, N.Y., returning to Lancaster in 1981. Since that time, he has worked as a writer and journalist at advertising agencies and other publications.

He lives in Lancaster with his wife and two children.

James H. Everhart

INSIDE this week's Lancaster Farming

Over-Order Pricing

Over-order pricing continues to receive attention from Pennsylvania dairymen this week Members of several key farm organizations met in Harrisbhurg to discuss RCMA's role in negotiating for over-order prices. Turn inside for their comments following the meeting

For more on over-order pricing turn to page A-27

FFA Week

Today marks the beginning of National FFA Week, a time to promote vocational agriculture and to applaud the accomplishments of tomorrow's farmers.

For stories about Lancaster County Star Farmer Floyd Huber and County Star Agribusinessman Dan Martin, turn to page F1

Wind Erosion

Though moving water gets most of the blame for soil erosion in the East, winter winds may be stealing more topsoil than we realize, says SCS soil conservationist Lee Bentz

"When we can't see it, we generally don't recognize that it exists," says Bentz. But the brown snow we've been seeing this winter is "proof-positive that wind is robbing farmers.

See an account of fly-away soil on page A-25

Pennfield Plans Mill

Pennfield Corporation, the largest Pennsylvania-based feed manufacturer, has announced plans to build a "state-of-the-art" feed mill in the Mount Joy Industrial Park.

The $6 4 million plant will have the capacity to produce 60 tons of dairy and hog feed an hour

For more on the new plant turn to page A-28

Philadelphia Eggs

Thursday, February 14
Report supplied by USDA

Market Comment: Prices were unchanged. Local sentiment mixed but mostly steady. Cartoned movement was irregular; improved in some quarters, light and disappointing in others. Several traders noted some degree of featuring but most reported volumes ordered as just enough to keep supplies moving. Floor stocks were in better balance at some points, heavy or building at others. Ungraded offerings yielding extra large and large sizes were ample. Class 3's and particularly 4's were under fairly active call.

Prices to retailers: sales to volume buyers, consumer grades white eggs in cartons delivered store door:

A Extra Large 56-59; A Large 55-58; A Medium 48-51.

Eastern Pa. & N.J. Poultry

Wednesday, February 13
Report supplied by USDA

Market Comment. Prices continued to advance in relatively light trading. Processor demand was moderate to good. Offerings light and short of full schedules this and next week. Finished demand good.

Prices Paid at Farm:

Light Type Hens: 9-9¾, mostly 9½.

F.O B. Plant. 12-13, mostly 12.

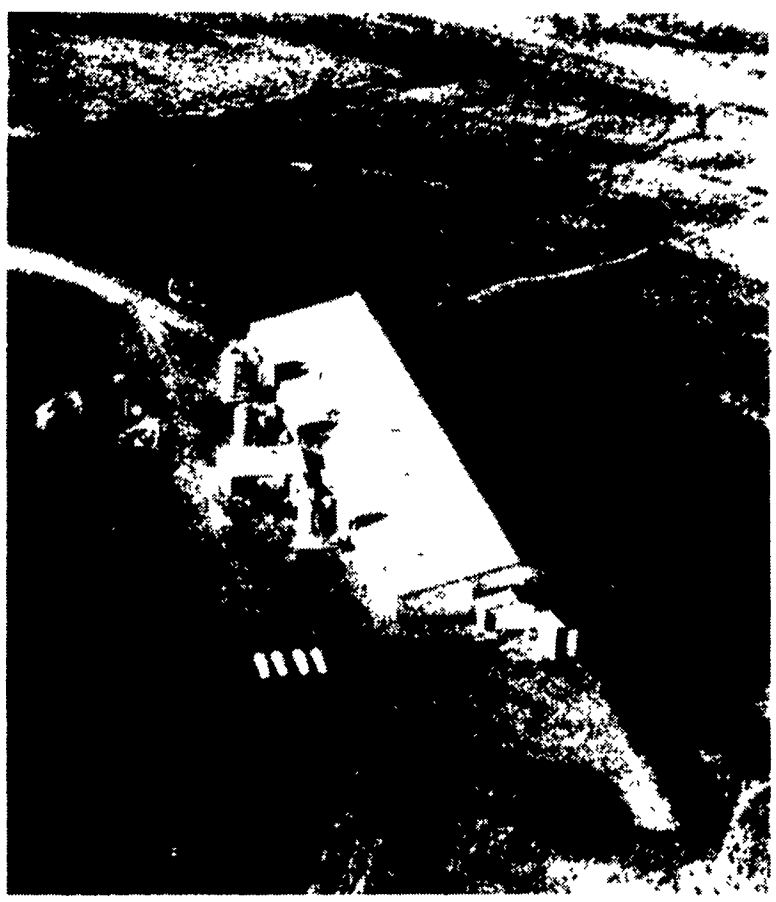
Putting It All Together. . . .

MANAGEMENT - PIGS - FEEDING

Pennfield's Hog Management Program produces the best results and profits in today's competitive hog production business.



Management Experience:
Sound management programs are essential, and Pennfield has combined technical know-how and experience resulting in proven programs that are available for you to use to improve your hog business.

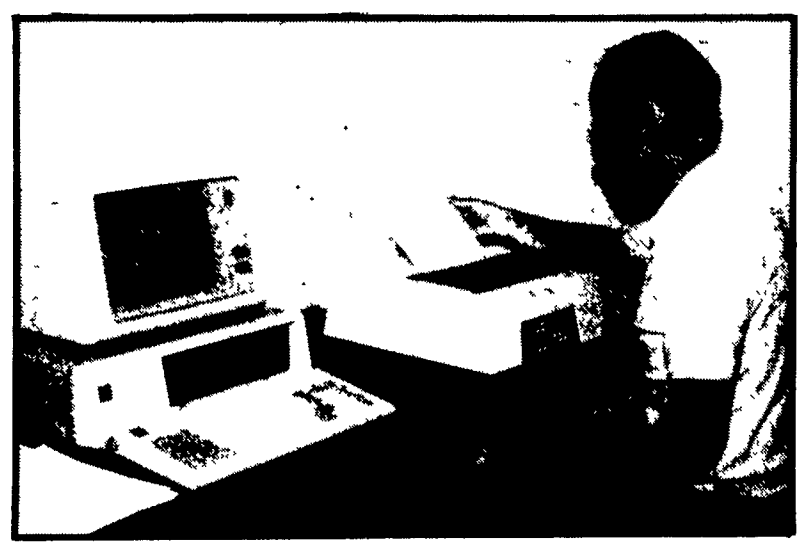
This year our program is being used by:

- **More than 8,000 sows**
- **Producing more than 150,000 market hogs**
- **Producing 120 to 140 pigs per crate per year**

ROCKY KNOLL FARM
Harlan & Shirley Keener & Family
Lancaster, PA

THE PENNFIELD SWINE MANAGEMENT COMPUTER PROGRAM

- Computerizes your complete hog management program.
- Provides daily work schedules printed at your farm.
- Replaces the card and book record systems now in use.
- Gives you immediate access to all individual sow or herd records and performance.
- Provides comparative performance records for your herd.
- Provides a comparison of your herd to many other herds on the Pennfield program.
- Gives you a choice of a Personal Computer or Terminal and a Printer at your farm.
- Provides "software" programming developed by Pennfield, people who understand the needs of profitable hog production.



This Program Will Be Demonstrated At The

Omaha Weekly

Thursday, Feb. 14
Report Supplied by USDA

Lower Dressed Beef quotations triggered a similar response in live cattle prices with Fed Steers and Heifers ending the week 25-75 cents lower. Futher inroads into the live price structure were forestalled by a buyer demand that easily equaled the modest salable supply. Overall finish continued ordinary and mud an ongoing problem. Cows 1.00-2.00 lower. Bulls fully 1.00 higher.

Estimated 5 day receipts 6750; Actuals last week 7042 and a year ago 9197. Steers comprised 38 pct of the week's receipts, Heifers 46 pct, Cows 13 pct, Feeders 2 pct.

SLAUGHTER STEERS: Choice 2-4 1050-1300 lbs. 63.50-64.50, package 65.00; few part loads 1000-1050 lbs. 63.00-63.50. Mixed Good and Choice 2-3 1000-1150 lbs. 62.50-63.50. Good 60.00-62.50.

SLAUGHTER HEIFERS: Choice 2-4 950-1100 lbs. 62.00-63.25. Mixed Good and Choice 2-3 900-1050 lbs. 61.00-62.00. Good 58.00-61.00.

Average of LS 214 detailed quotations for 900-1100 lb. Choice Steers 63.25; 1100-1300 lbs. 64.10. Average cost Steers 62.73, average weight 1192 lbs.; as compared 63.79 and 1178 lbs. a week ago. Average cost Heifers 61.59, average weight 1038 lbs.; as compared 62.50 and 1039 lbs. a week ago.

SLAUGHTER COWS: Breaking Utility and Commercial 2-3 40.50-44.50. Cutter and Boning Utility 1-2 40.00-43.00, High Dressing to 44.50. Canner and Low Cutter 35.00-40.00.

SLAUGHTER BULLS: 1-2 1300-2400 lb. 49.00-55.00, Low Dressing to 42.00.

WEEKLY CATTLE SUMMARY: Feeder Steers under 600# 2.00-3.00 higher; over 600# 1.00 higher. Feeder Heifers under 500# 3.00-4.00 higher; over 500# 2.00-2.50 higher. Feeder numbers back to normal following last weeks very light run due to weather. Cow and Bull percentage below normal. Slaughter Cows steady to 50 cents higher with very limited test on the close barely steady. Breaking-Utility 2-3 43.00-45.30. Boning-Utility 1-2 40.00-45.75 several 41.00-45.25. Cutter 1-2 38.50-43.00. Canner and Low-Dressing Cutter 36.00-39.25. Bulls 2.00 higher. Y.G. 1 1500-2300# 52.00-57.00 Few 50.00-52.00; 1200-1500# 50.00-54.20, package 1495 lb. 57.10, few thin in late trading 48.00-50.00. Salable receipts this week estimated at 13,200 head; last weeks actual count 1651; last years number 13,406. Feeder Steers and Heifers comprised 93% of receipts; Cows and Bulls 7%.

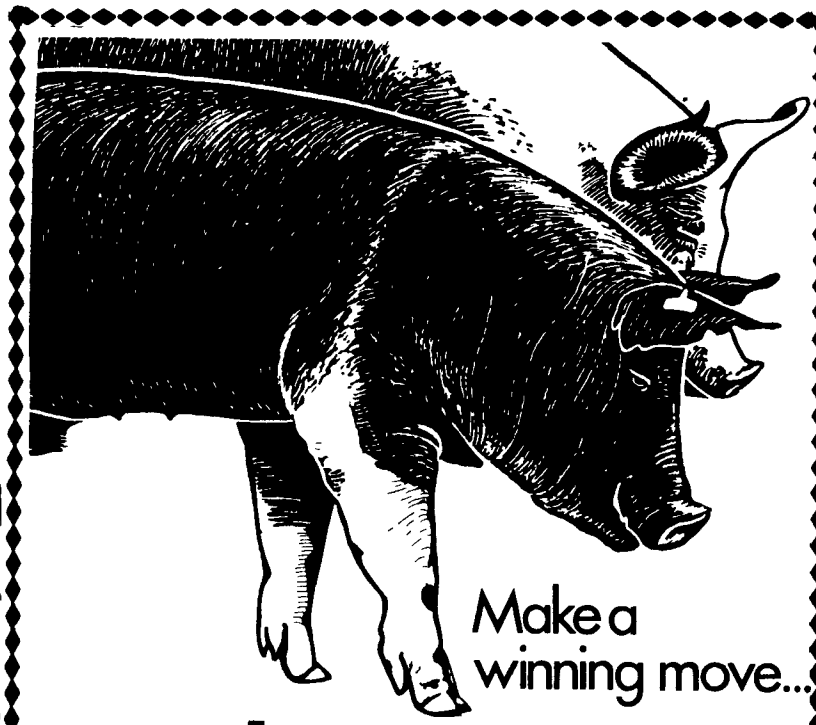
SHEEP: No Sales Offer.



Make a winning move...

Kleen Leen

Play to win with our complete Checker Mates Hog Breeding Program. It's the result of many years of genetic research.

It can pay off in bigger, healthier litters in the farrowing house thanks to the maternal heterosis of Checker Gilts. Plus, the money saving performance punch contributed by Checker Boars when your pigs reach the finishing house.

But it's more than boars and gilts. It's a complete breeding program aimed at making you a winner.

Stop in and ask us about it today.

To Be Aware of Milker's Knee

Everyone knows about tennis elbow, but who has ever heard of "milker's knee?" Dairy producers may have this form of degenerative arthritis without being aware of it. The condition occurs from the squatting, bending and lifting that dairy farmers must do when attaching milkers to cows standing at floor level.

This wearing away of cartilage in the joints is most common among dairy farmers. The first sign is usually pain in the knees. Family and friends may notice that the person is becoming bowlegged. Other signs include frequent loss of balance; swelling; locking, stiffening, or giving out of the knees; and a grinding or snapping noise when bending.

A knee injury can develop into milker's knee but people who have never had a knee injury can be affected. Some farmers simply may have inherited the problem, especially if the family has a history of arthritis.

Dr. Dennis Murphy, safety specialist at Penn State, tells us that the most important preventive is to avoid squatting. Instead, kneel on one knee and wear knee pads. If you consult a physician at the first sign of trouble, you can probably keep the condition from becoming worse.

To Recognize Lime For Weed Control

You have never heard us recommend lime for weed control; however, indirectly lime is important to obtain good herbicide weed control. Both research work and farm experience has indicated that herbicides are not as effective in sour soil. So, for best control with chemicals, the soil-lime requirement must be satisfied. Many poor weed control experiences have been reported on sour soils. A complete soil test will indicate the amount of lime needed. There are many other advantages to crop production in addition to better herbicide action

To Know Sewage Sludge Content

The use of sewage sludge on farm land is becoming more common. As the amount of this material increases, the farmers should be aware of the danger of excessive application. There can be a problem of too much sludge causing a build-up of heavy metals such as zinc, copper, cadmium and cobalt. When these metals become too high in the soil they are toxic to plants. Farmers that utilize sewage sludge are urged to require a test of the material in order to know the exact mineral and fertilizer content. Disposal plants are urged to provide this test for their farmers in order to know what is being done. Both the sewage and the soil can be tested through the Penn State Testing Laboratory. Don't apply sludge without knowing the mineral build-up in the soil.

To Appreciate Snow

I have heard it said that there is no such thing as bad weather, only different kinds of good weather. Well, some may not agree with that but we can agree that snow cover can be very helpful. Very cold weather without snow cover is extremely hard on winter wheat and barley, on strawberries, and on many kinds of shrubbery. The snow helps keep the ground warmer and prevents drying out of the soil around the plant roots. With long periods of very cold weather without snow cover, we'll have dehydration of the plants and a good possibility of winter kill in the spring

Snow cover also prevents the heaving out of alfalfa plants and strawberry plants. Without snow during long periods of freezing and thawing, the plant roots will work out of the ground. Yes, snow is good weather for the farmer.

The Extension Service is an affirmative action, equal opportunity education institution.

OUR READERS WRITE,
AND OTHER OPINIONS

As one who was involved in the situation discussed in the Feb. 9th letter from John & Abe Barley, I feel compelled to clarify several of the particulars which may not have been understood.

I am acutely aware of the fact that prices have fluctuated dramatically in the past, depending on programming issued by J.I.CASE and other companies. While no individual dealership is capable of dictating company-wide programming, all dealerships operate with identical programming.

The point being that the second price given on the machine in question ($5,000 less) was in fact quoted under different programming.

Failure of the second salesman to indicate this fact is unfortunate and in conversation with his employer, I have been informed that the salesman has been reprimanded for his lack of professionalism.

Regarding the situation involving the purchaser of the CASE machine and events which followed, let the record show:

1. I cooperated fully in supplying the Barleys with the names of several CASE personel to whom such concerns should be addressed, and concur that their concern is in fact a very valid one However, the situation is not unlike any other marketing purchasing arrangement. If a farmer sells a load of cattle at auction on a given day & the following week the market is up $2.00/hwt., how much success would he have attempting to collect the increase on his cattle in retrospect?

2. I had no way of knowing what the programming for the upcoming month was going to be (Documented proof available.)

3. The price at which the machine was purchased reflected the same small margin of profit at which machines were sold by this dealership in the following month under substantial programming. (No price gouging).

4. The CASE/IH merger had nothing to do with this particular situation, in that it preceeded the announcement of same, and in all probability once inventory levels are at a more manageable plateau, the really substantial discounts & rebates will be a thing of the past.

Concerning the merger itself, I believe I speak for all concerned, former CASE & IH dealers alike, when I say that we desire to offer the same cooperative competition as in the past, though now with a similiar top-quality equip.

Donald L. Hoover
Binkley and Hurst Bros, Inc.

To observe a situation from the standpoint of one who has spent a life farming and also an interest in the Case Farm Utility machinery business, I can certainly sympathize with the Barley Brothers to have been told they could have saved $5,000 on the purchase of a Case Skid Loader. However, when one considers the dealer's commission plus a liberal Case Co. discount sales program, a situation of this type can take place.

The Case I.H. merger should result in an increased number of Dealers to supply and service the Case and I.H. line, as well as provide plenty of competition to the advantage of the Farmer and survival of the fittest for the Dealers.

To be sure, those who own I.H. equipment probably would have preferred that I.H. buy out Case. Since it did not happen that way, I.H. owners should rejoice that the I.H. line was attractive enough to the financially strong Tenneco Co. to take over. They now come forth with the best of the two companies and we will remain strong and proud owners of a good improved equipment line

Harold C. Herr

THE BIBLE SPEAKS
BY LAWRENCE W. ALTHOUSE

"LAZARUS, COME OUT!"
February 17, 1985

Background Scripture:
John 11:1-53.
Devotional Reading:
John 11:45-54.

The story of Jesus and Lazarus is a religious masterpiece. Somehow in these spare 44 verses, the Evangelist manages to completely capture both the heights of faith and the depths of dispair with which Christians experience the fact of death.

There is Martha's amazingly honest reproach, "Lord, if you had been here, my brother would not have died" (11:21). Many, many Christians have said or felt something similar to that in a moment of seemingly unbearable grief. It is an honest Christian reaction: Lord, if you love us, how could you let this happen? By the time Jesus arrived in Bethany, Lazarus had already been in the tomb four days. And we too often find it difficult to understand why God is late.

"I KNOW"

There is also Martha's struggle between what she believes and what she knows. "I am the resurrection and the life," Jesus tells her, "he who believes in me, though he die, yet shall he live." Then he asks her, "Do you believe this?"

It is difficult to know just what was the level of her response. The words are these: "Yes, Lord; I believe that you are the Christ, the Son of God, he who is coming into the world" (11:25-27). The words could represent nothing more than a superficial recitation of a belief formula, or they could be a profound confession of faith in Jesus. She may not know what will happen with her brother Lazarus, but firm in her faith in Christ.

There is also the perprising grief of Jesus. We might expect that, with his strong faith in the love of God and his anticipation that God will enable Lazarus to be resurrected, Jesus would hardly weep at the tomb of Lazarus. But John tells us, "When Jesus saw her (Mary) weeping, and the Jews who came with her also weeping, he was deeply moved in spirit and troubled" (11:33). As they walk to the tomb, John also tells us, "Jesus wept" (11:35).

FOUR DAYS

So, despite our faith, death is a time for weeping, not because it means a permanent "dead-end" to existance, but because there is always the sense of personal loss Jesus wept because he shared the sorrow of Mary, Martha and their friends.

But the story of Lazarus does not end in grief, but in faith. "Take away the stone," Jesus commands and Martha objects that it is too late to revive him. But the response of Jesus is an invitation to faith: "Did I not tell you that if you would believe you would see the glory of God?" (11:40).

Although Jesus has been weeping for his friends, it is with supreme faith that he approaches the tomb: "Lazarus, come out!" Christ is Lord of both life and death and the resurrected Lazarus is a sign to remind us all.

Farm Calendar

Monday, February 18

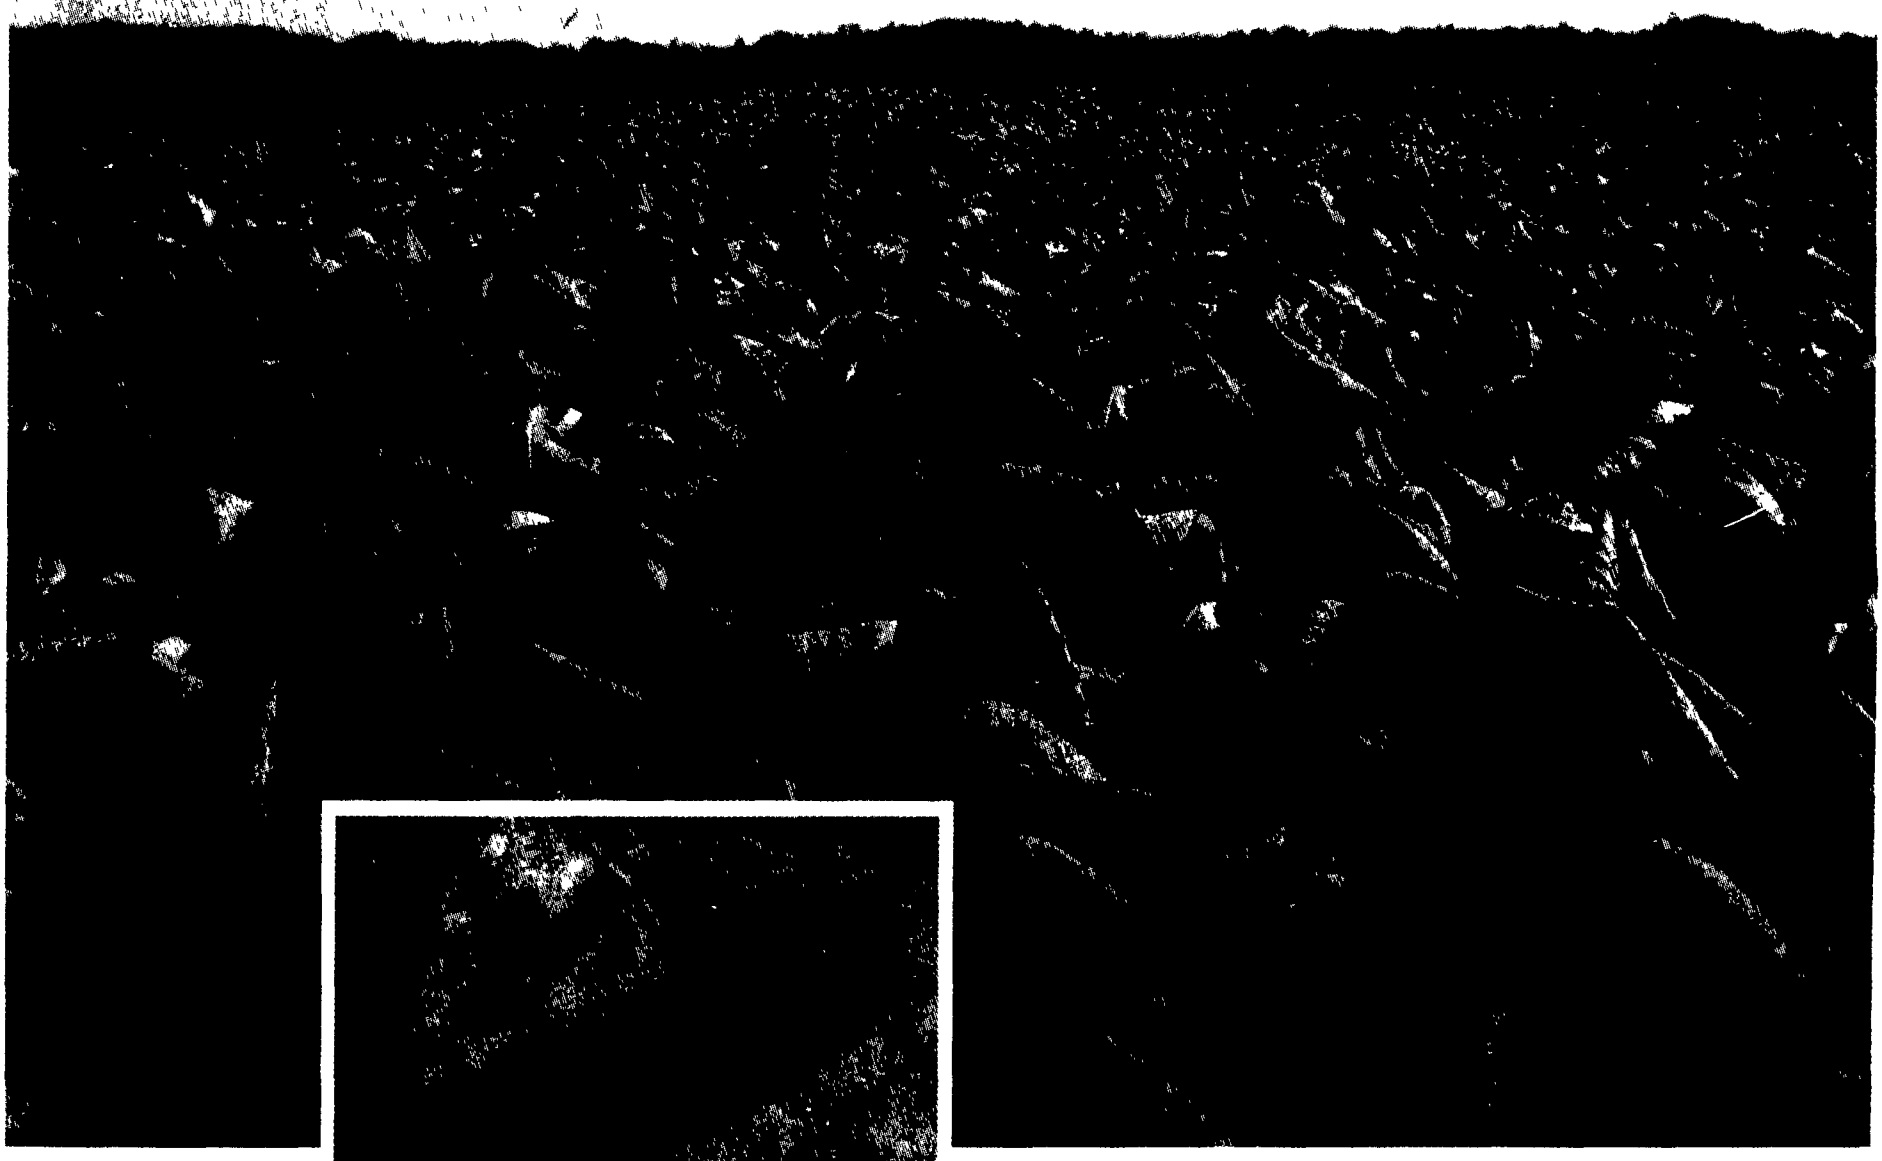
UNCLE OTIS, WHEN YOU SAID, "HOW 'BOUT US TAKING THE SLED OUT TO THE OL' PASTURE HILL"...
THIS ISN'T EXACTLY WHAT I HAD IN MIND
DAVE CARPENTER

LORSBAN* insecticides: The only way to protect your tobacco from cutworm damage.



You've got your share of problems raising burley tobacco. But cutworm damage doesn't have to be one of them when you use LORSBAN* insecticides — the only insecticides that effectively control cutworms in burley tobacco.

You'll like the way LORSBAN insecticides stop cutworm damage fast and effectively. But what you'll like even better is their application flexibility. LORSBAN* 15G and LORSBAN* 4E are formulated to fit the way you farm so there's no need for special application equipment or extra trips across your field.

For six years, LORSBAN insecticides have proven their ability to control cutworms. Fact is, you can't buy a better insecticide for prevention of cutworm damage.

This year, don't let cutworms get started in your tobacco. For unparalleled protection and application flexibility, use LORSBAN 15G Granular or LORSBAN 4E Liquid Insecticides.

Regardless of the insecticide you choose, ALWAYS READ THE LABEL BEFORE USE AND ALWAYS CAREFULLY FOLLOW ALL LABEL DIRECTIONS AND PRECAUTIONS for safe use.

DOW*

*Trademark of The Dow Chemical Company

Where they fit, nothing works better.

LORSBAN* insecticides fit the way you apply insecticides.
1. LORSBAN 4E plus herbicides impregnated on dry fertilizer, broadcast spread and double disced.
2. LORSBAN 4E plus other insecticides, herbicides and soil fungicides, broadcast sprayed and double disced.
3. LORSBAN 15G broadcast spread and double disced.
4. LORSBAN 15G bulk-blended with other granular insecticides and dry fertilizer, broadcast spread and double disced.

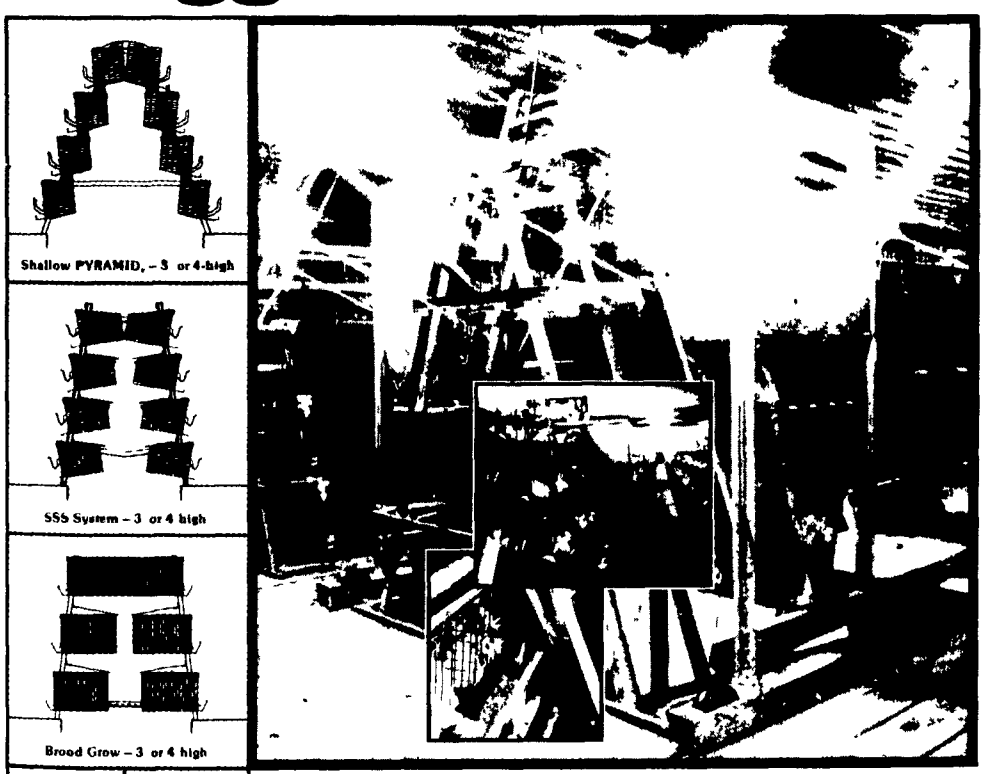
Fast track to egg cost reduction



Chore Time's MEALMASTER FeedKar traveling feeder can help you get your egg costs on track Here's how

1 The typical chain feeder uses 1½ hp to feed each cage tier – 6 hp for a 4 high Our hopper system traveling on tracks is pulled by a cable using only ¼ hp – a 95% energy reduction!

2 Cuts feeder maintenance and labor costs to virtually zero" You know what a chain feeder costs to maintain!

3 Evens out egg production from one end of the row to the other – birds at the front can't "highgrade" the feed

We'd like to talk to you about the other ways the nearly 200 feeders we've sold are helping owners Our FeedKar is now standard on all Chore Time brood grow and layer cages our famous shallow PYRAMID and new deep PYRAMID our 3 and 4 high SSS

Find out more about the FeedKar – plus our line of cage systems and the Chore Time total package" of feed bins auger ventilation and waterers

Future promising for state's small-fruit growers

BY JUDY HULL

BIGLERVILLE — Pennsylvania growers of small fruits have a very promising future, Penn State horticulturalist Roland Daniels told a group of growers at a recent educational meeting at the Penn State Fruit Research Lab here.

The day-long meeting ranged over a number of topics, including, marketing, record keeping, weed control, chemical spills, and a review of diseases. Extension specialists from Pennsylvania and Maryland were on hand.

Daniels said a recent survey showed that the state has about 42 commercial raspberry growers, with more than one-half of an acre of berries. The total acreage represented by these growers amounted to 82 acres. The survey also indicated, Daniels continued, that most of the commercial raspberries are grown in the 26 counties surrounding the major centers of population in the state such as the Harrisburg-York-Lancaster area, Philadelphia-Allentown, Pittsburgh, and Erie. Over one-half of the raspberries grown in the Commonwealth are in the southeast area, he said.

A major source of concern for raspberry growers in Pennsylvania is the difficulty in obtaining disease-free stock, Daniels said. The survey showed, he said, that growers throughout the state had obtained their plants from 11 different nurseries, only one of which is in Pennsylvania. This, he noted, is quite typical. Growers have, he emphasized, "a real hard time getting reliable, healthy planting stock."

Obtaining quality plants is a serious problem for growers, he continued, and noted that Penn State researchers have obtained funds to study the situation. Daniels said he and other researchers hope to visit nurseries throughout the next year to try and detect where the problem might be.

"If we cannot get disease free plants in the state, we might have to ask our (Pennsylvania) Department of Agriculture to enforce more stringent regulations (on plants brought into the state)," he said.

Larry Yager, Penn State marketing agent, spoke to the group on the importance of marketing and record keeping. "Marketing," he said, "is part of your overall program and strategy and not an end to itself." He added that it is tremendously important for growers to design a management plan that can help them determine whether or not a certain crop is right for them.

QUALITY COUNTS!

We have the equipment to meet your poultry needs...

Equipment Operators meet for annual workshop

BY ROBIN PHILLIPS
Staff Correspondent

LEESPORT – Jack W. Schonely, district manager of the Berks County Conservation District, welcomed "land movers and improvers" to the 30th Annual Equipment Operators Workshop in Berks County last week.

The workshop featured speakers from conservation services and commissions, and representatives from UGI, AT&T, and Texas Eastern. Many area contractors were represented as efforts centered on awareness of soil conservation and underground utilities when digging.

Bernard Morrissey, representing Bernard Morrissey Insurance, Inc., and the Pennsylvania Land Improvement Contractors, began the meeting with a film presentation on land conservation.

The Land Improvement Contractors of America (LICA) represents contractors who protect the land and water resources through modern, efficient conservation techniques. It is the leading voice in the United States for the conservation contractor.

The LICA sponsors contractor workshops, management seminars, and various publications to educate its members on current, efficient ways of conserving natural resources. Members include contractors who build or work on dams and related structures, drainage systems, farm ponds, land clearing, irrigation, seeding and sodding, surveying, waste treatment, and many other related practices.

Morrissey informed the contractors that the Pennsylvania LICA is currently lobbying to get bills passed to help contractors and to make their jobs easier.

"Only three percent of land feeds four billion people," the film informed those attending the workshop. With an emphasis on controlling erosion on existing farmland, Morrissey and Mike Allyger, director of the LICA chapter, encouraged involvement from contractors.

Duane Pysher, district conservationist, and Roy Shryock, conservation technician, were on hand to review current conservation concerns with the contractors. Representing the USDA Soil Conservation Service, Pysher presented ideas on keeping the soil where it belongs." The ideas applied to the condition of the soil, and vegetation applications. Adding that Berks County soils are naturally acidic, Pysher recommended the use of bio-degradable netting to hold the soil.

Shryock discussed terrace methods of water control, and stressed the uniformity of farm land if possible.

Ammon Ziegentus, waterways conservation officer, represented the Pennsylvania Fish Commission at the meeting. Contractors are liable for any fish that may be killed during a work project," he told operators, "anytime working within 25 feet of water shed or stream." A permit is needed from DER.

Morrissey followed with a discussion of adequate insurance coverage for anyone digging underground. He recommended a minimum of one and one-half million dollars coverage for most contractors. If a company is not covered, he told operators, a utility can attach the assets of the company if a claim is filed for hitting an underground gas line or utility.

The Pennsylvania One Call System was advocated for all equipment operators. A telephone system designed to alert all its participating utilities when someone is excavating, the network has greatly improved utility - contractor relations and radically lowered the number of times a utility line has been hit and consequently, shut down.

UGI representative Tom Price informed operators that their line was hit 200 times in 1983, and was lowered to 124 hits in 1984, much to the credit of the One Call System.

Bill Kiger, director of operations of the Pennsylvania One Call System, urged contractors to use this system before digging. "Before You Dig Anywhere in Pennsylvania - Call: 1-800-242-1776 - Investigate Before You Excavate," the system's signs advise. The system allows this free call to alert all of the participating utilities at the same time and enables the excavator to answer a few questions concerning the location of the digging site and the nature of the excavation Utilities will be notified and the location requesdt will be filed

Paul Kramer, Texas Eastern, informed operators that for every mile of line that has to be shut down, it costs the contractor $6,000 The line must be shut down after a hit" and the gas must be released.

The informative workshop also featured speakers from Concrete Safety Systems, Bethel, Reading Branch of C.N.A., and Design Data of Lancaster, A.T.&T.

Displays, handouts, and safety signs were available for all participants as equipment operators were urged to construct conservation measures safely."

Maryland's Farm Fairs set for '85

ANNAPOLIS, Md. – Over 2 million persons attend Maryland agricultural fairs and shows annually.

The interest in the agricultural fair program expands continuously as new and exciting entertainment and educational events are added to fair schedules. You can view agricultural exhibits and talk directly with producers during the Maryland Agriculture Week program held at selected malls throughout the state from late January through March.

In the spring youth exhibitions and livestock promotion are held at the Pork Expo and Maryland Sheep and Wool Festival.

The fair season kicks off in July with county fair programs conducted in all counties throughout the state. City and country folk alike enjoy the opportunity for hands-on experience with farm animals and products. They can view prize winning quilts and cakes while their children thrill to the sights and sounds of the carnival.

Autumn is a beautiful time to view the fruits of the harvest at fairs in Southern Maryland and community shows held throughout Western Maryland. The year closes with an extravaganza at Lexington Market in Baltimore by the Maryland Beekeepers.

A listing of all agricultural exhibitions is available, free of charge, from the Maryland Agricultural Fair Board. Requests should be directed to "Fair & Show Schedule", Maryland Department of Agriculture, 50 Harry S. Truman Parkway, Annapolis, Maryland 21401.

USDA's Peter Myers to address Lancaster Tillage Conference

LANCASTER — The Fourth Annual Lancaster County Conservation Tillage Conference will be held at the Farm and Home Center, 1383 Arcadia Road, Lancaster, starting at 9:00 a.m., Tuesday, February 26, 1985.

Two featured speakers for the morning session of this year's conference are Peter C. Myers, Assistant Secretary for Natural Resources and Environment, U.S. Department of Agriculture, and Dr. Dale Baker, a researcher at The Pennsylvania State University.

The afternoon session will feature a comprehensive review of the Lancaster County Conservation District's tillage plot program and a panel of farmers talking about their tillage programs.

Peter Myers was the seventh person to head the USDA, Soil Conservation Service, which is celebrating its 50th anniversary this year. This month, Myers was named to replace John Crowell as Assistant Secretary of Agriculture.

USDA's Peter Myers

Myers is a long-time cooperator with his local conservation district in Madrid County, Missouri. He raises row crops and manages a complinement "farrow-to-finish" hog operation on his 1,100 acre farm.

Dr. Dale Baker will speak on the topic of "Nutrient Management and Its Importance to the Chesapeake Bay." Lancaster's increased incidence of ground water pollution and heavy use of manure and fertilizer has brought Dr. Baker to eastern Lancaster County to conduct research related to nutrient management.

John Hauck of Chevron Chemical Company will address the subject of cover cropping. Having an established cover crop or good residue on the soil surface is the key to erosion control in the no-till cropping system.

Lunch is being offered at a subsidized cost of $4.00 for those who attend and register. For further information call Gerald Heistand at the District Office, 299-5361.

Order 4 milk $14.12 for January

ALEXANDRIA, Va. — Middle Atlantic Order Market Administrator Joseph D. Shine has announced a January 1985 base milk price of $14.12 per hundredweight and an excess milk price of $12.35. The weighted average January price was $14.05 and the butterfat differential for the month is 16.3 cents. The base milk price was up 11 cents from December and was 32 cents higher than last January. The weighted average price was up 6 cents from December and was 29 cents higher than a year earlier.

The advertising withholding rate, which is deducted from the base and excess milk price but not the weighted average price, was 10 cents a hundredweight in January 1985 and 14 cents last January. The gross value of January producer milk was $71.3 million, compared to $70.3 million a year ago.

Mr. Shine said that producer receipts totaled 509.3 million pounds during January, a decrease of 3.1 million pounds from last January, but the average daily delivery of 2,441 pounds per producer increased 94 pounds or 4.0 percent from a year earlier. Class I producer milk totaled 261.6 million pounds and was up 4.7 million pounds or almost two percent from last January.

Class I milk accounted for 51.35 percent of total producer milk receipts during the month, compared with 50.12 percent in January 1984. Base milk accounted for 90.84 percent of total producer milk receipts in January compared with 90.46 percent last year. The average butterfat test of producer milk was 3.77 percent, down significantly from 3.86 percent last January.

Middle Atlantic Order pool handlers reported Class I in-area milk sales of 216.4 million pounds during January, an increase of 0.4 percent from a year earlier after adjustment to eliminate variation due to calendar composition.

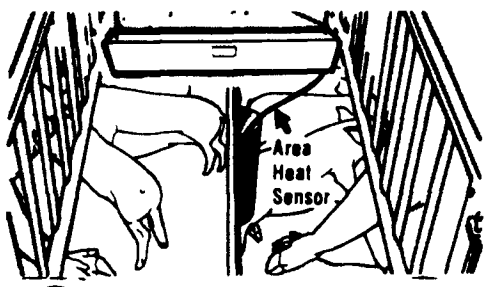
Temperature Controlled INFRARED HEATERS



"The Brooder With A Brain" *it thinks for itself*

NO OVERHEATING — NO CHILLING: A solid-state control and sensor act better than a brooder thermostat to automatically regulate radiant heat output to within ± ½° of setting.

SAVE PIGS — REDUCE PILING: Pigs spread out comfortably under blanket of infrared heat

SAVE ENERGY, TIME, LABOR: Downgoing infrared heats pigs, not the air. Set automatic control and forget it; sensor allows constant temperature below heater. Controlled infrared is the most economical form of clean electric heat. No moisture or carbon monoxide produced as with gas heaters!

VARIOUS MODELS: Choose individually controlled heaters or a centrally controlled system, automatic or manual regulation. Kalglo heaters have durable metal sheath heat elements (no glass tubes to break) and come ready to plug in and use. Larger models also available for nursery and finishing pens.

Send for free literature.

Maple Producers hold annual meeting

MEADVILLE — The Northeastern Pennsylvania Maple Producer's Association Annual Meeting and Dinner was held on Jan. 21, at the Pleasant Valley Grange Hall, Route 191, North of Honesdale. About 70 maple producers, their families and friends attended this all-day meeting.

A new maple syrup movie titled: "Pure Maple - Frost and Fire" was shown to the group. This film is the newest promotional film dealing with maple syrup production, equipment used in the production of maple syrup and the different products and uses of maple syrup. This film will be available for use by schools, civic organizations, service groups, 4-H clubs and others interested in learning more about maple syrup production. Interested groups should call the Wayne County Extension Office at 717-253-5970 ext. 114 for details on scheduling this film.

Two educational speakers were also featured at this year's meeting. The first speaker was Louis Beck, from the Wayne County Soil Conservation Service. Lou's talk was titled, "Developing and Maintaining Access Roads." Louie had a series of slides showing proper and improper road construction and design and how it can affect the stability and integrity of surrounding soils. He also had samples of Agri-Fabric, a synthetic road building material used to gain access to unstable and poorly drained roadways, swampy areas and temporary roads.

The other educational speaker was Jack Gearhart, Wayne County service forester with the Bureau of Forestry. Jack's talk was titled, "Diseases and Insects In The Sugarbush." Jack identified some of the insects that could be a problem in forested areas in Wayne County and surrounding counties in New York State. He also identified some of the different diseases that can affect the health of maple trees and other hardwoods in a forested area.

A special feature of this meeting was a musical program presented by Ed and Geraldine Berbaum, representatives of the Pennsylvania Humanities Council. Their program was titled: "Folk Fiddle Music in Pennsylvania: An Early American Heritage." Using a fiddle, a guitar, a banjo and an alto saxophone, they played a number of selections including waltzes, polkas, cotillions, jigs, reels, schottishes, and square dance tunes. They also included some history and background information on how these types of music were introduced into America by early settlers from other countries.

Bob Hess, secretary-treasurer of the Pennsylvania Maple Syrup Council, gave a report on the Pennsylvania Maple Syrup Council Annual Meeting which was held at the Pennsylvania Farm Show. He also reported on the maple syrup sales booths at this year's Farm Show.

In other association business, Ralph Curtis, from R.D.#1, Newfoundland and Spencer Callender, from R.D.#2, Thompson, were re-elected as directors for the Northeastern Pennsylvania Maple Producer's Association.

Wayne County maple producers interested in joining the Northeastern Pennsylvania Maple Producer's Association are encouraged to contact Ralph Curtis at R.D.#1, Newfoundland, Pa. or by calling 717-689-2353.

The Wayne County Extension Service has information on maple syrup production available at all times. Those interested in receiving this information are encouraged to call 717-253-5970 ext. 114 or they can pick-up the information by stopping at the office which is located in the basement of the Wayne County Courthouse in Honesdale, Pa.

David J. Yoder, left, received congratulations from Walter Jacoby of the American Institute of Cooperatives at a retirement party held in Yoder's honor Saturday.

Yoder retired as general manager of Atlantic Breeders Cooperative after 41 years of service. Jacoby cited Yoder as "a great believer in cooperative education" and for his "exceptional devotion to the work of cooperatives."

Twelve people made presentations to Yoder during the program, which was attended by 275 people. In response to Jacoby, Yoder said: "I couldn't have selected a better vocation. It is the greatest honor to have had a part in making available the benefits from improved genetics and to make better dairymen of farmers."

Family Farm Assistance

Program information available

HARRISBURG — Senator Edward W. Helfrick, R-27, reports that information on the Family Farm Assistance Program is now available.

According to Helfrick, the Family Farm Assistance Program will provide for development of the agricultural-rural base of the state through incentives to new farmers, or those wishing to convert or expand their operations. To accomplish this goal, two types of financial assistance will be provided; loan guarantees and interest deferrals.

This program was established by the Agricultural Development Act, which was signed into law on July 2, 1984 by Governor Dick Thornburgh. Ten million dollars have been appropriated by the General Assembly for the Family Farm Assistance Program to be used through June 30, 1987. Direct loans are not available through this program, since the program was designed to encourage farm lending through private financial institutions.

"Pennsylvania's family farmers are the backbone of Pennsylvania agriculture, our number one industry," said Helfrick. "This important program provides for agricultural development through economic initiatives to our farmers."

Additional information and materials may be obtained through the Department of Agriculture, Bureau of Agricultural Development, 2301 North Cameron Street, Harrisburg, Pa. 17110 or calling (717) 783-8460.

Commodity loans

WASHINGTON — Commodity loans disbursed in February by the U.S. Department of Agriculture's Commodity Credit Corporation will carry a 9-1/8 percent interest rate, CCC Executive Vice President Everett Rank said today.

The new rate, down from 9-1/2 percent, reflects the interest rate charged CCC by the U.S. Treasury in February, Rank said.

Poultry inventories down

HARRISBURG — Pennsylvania poultry producers excluding commercial broilers had 22.5 million birds on hand December 1, according to the Pennsylvania Crop and Livestock Reporting Service. This represents a five percent decrease from the December 1, 1983 level of 23.8 million chickens.

The total inventory of hens and pullets in the laying flocks was 18.5 million, seven percent more than last year's 17.3 million. Pullets three months old and older but not yet of laying age amounted to 1.88 million, 36 percent below last year's level of 2.94 million. Pullets under three months of age at 1.92 million was 44 percent below the 1983 level of 3.40 million. Other chickens (primarily roosters in breeding flocks) were estimated at 200,000, 25 percent more than the 160,000 in inventory last year. Considering all chickens (excluding commercial broilers) the value per bird was placed at $2.25 compared with $1.85 per head for December 1, 1983.

The December 1, 1984 United States inventory estimates and the percent change from the previous year are as follows: all chickens (excluding commercial broilers) 374 million, up two percent; hens and pullets of laying age, 286 million, up three percent; pullets three months and older but not yet of laying age, 39 million, up three percent; pullets under three months of age, 43 million, up one percent, and all other chickens, six million, up three percent.

The value per of the U.S. flock was placed at $2.02. This compares with the December 1, 1983 value per head of $1.96.

Finance clinic

LANCASTER — A two-day Farm Financial Management Clinic is being sponsored by the Lancaster County Cooperative Extension Service, Feb. 21-22 at the Lancaster Farm and Home Center. Advance registration is necessary; reservations are accepted on a first-come basis. For more information and for registration call the Lancaster County Office at 717-394-6851.

REX RABBIT GROWERS

You are invited to attend a meeting on marketing your Rex pelts.

Also a qualified speaker will present the following: breeding & conception problems, herd health management, maximizing your existing breed stock to its fullest profit potential.

Graded Rex Pelts will be on display. Bring a few of your pelts and compare.

Joint study committee on milk marketing sets initial meeting

HARRISBURG – The future of mandatory wholesale and retail pricing of milk in Pennsylvania will be the topic of discussion during the first meeting of a newly created joint study committee, announces Sen. Edward W. Helfrick, chairman of the Senate Agriculture and Rural Affairs Committee. The meeting will take place in the Main Capitol Building, Room 461, at noon on Wednesday, Feb. 27.

"Late last year, as the General Assembly was considering Sunset legislation dealing with the Pennsylvania Milk Marketing Board and changes to the State's Milk Marketing Law, an ammendment was offered in the House which called for an additional study on resale pricing of milk," recalls Helfrick, who sponsored the original legislation (S.B. 1527).

The Committee has until December 31, 1985 to report its findings to the General Assembly."

Helfrick points out that Act 243 of 1984 spells out the makeup of this joint study committee, consisting of four members representing consumers, four milk dealers, and four milk producers. These members are designated by the majority and minority leaders of the House and Senate. Also serving are the majority and minority chairmen of the House and Senate Agriculture and Rural Affairs Committees, and a member-at-large appointed by the state's Secretary of Agriculture.

An advisory committee, made up of the chairman of the Milk Marketing Board, the dean of Penn State's College of Agriculture, and the dean of the Wharton School of Business, and their respective staffs, will be assisting the Joint Study Committee in its evaluation of milk prices.

Members of the Joint Study Committee and Advisory Committee include: Sen. Edward Helfrick, chairman, Senate Agriculture & Rural Affairs Committee; Sen. Patrick Stapleton, minority chairman; Rep. Samuel Morris, chairman, House Agriculture and Rural Affairs Committee; Rep. Carmel Sirianni, minority chairman; James Sumner, director of the Bureau of Markets, Dept. of Agriculture; Daniel Martin, Manheim, producer, Theodore Hoover, Patton, producer; Timothy Merwarth, Easton, producer; Barbara Robison, Coal Center, producer; Thomas Laudenslager, Wawa, milk dealer; William Schneider, Pittsburgh, milk dealer; Norm Rich, Lewisburg, milk dealer; Richard Hartman, Reading, milk dealer; Patricia Long, Lebanon, consumer; Dortha Charles, Elizabeth, consumer; John Lord, Abington, consumer; Carol Brann, Lewisburg, consumer, Robert Derry, chairman, Pa. Milk Marketing Board; Samuel Smith, dean, Penn State's College of Agriculture; and Russell Palmer, dean, Wharton School of Business

Helms calls credit relief measure "substantial assistance"

WASHINGTON – Senator Jesse Helms, Chairman of the Committee on Agriculture, Nutrition, and Forestry, said Secretary Block's announcement of credit relief measures for financially-strapped farmers is "timely and substantial assistance that will help farmers obtain funds necessary for spring planting."

"These new guidelines will help farmers and bankers make more effective use of the credit initiatives announced by President Reagan last year," said Helms. "It will also help to alleviate the substantial backlog of loan applications so that farmers can obtain necessary credit in a timely manner.

The measures recently announced modify a credit program implemented in September by allowing banks to write down government guarantee for up to 90 percent of the loan. Banks will still have the option of obtaining the guarantee by writing off 10 percent of the loan principal.

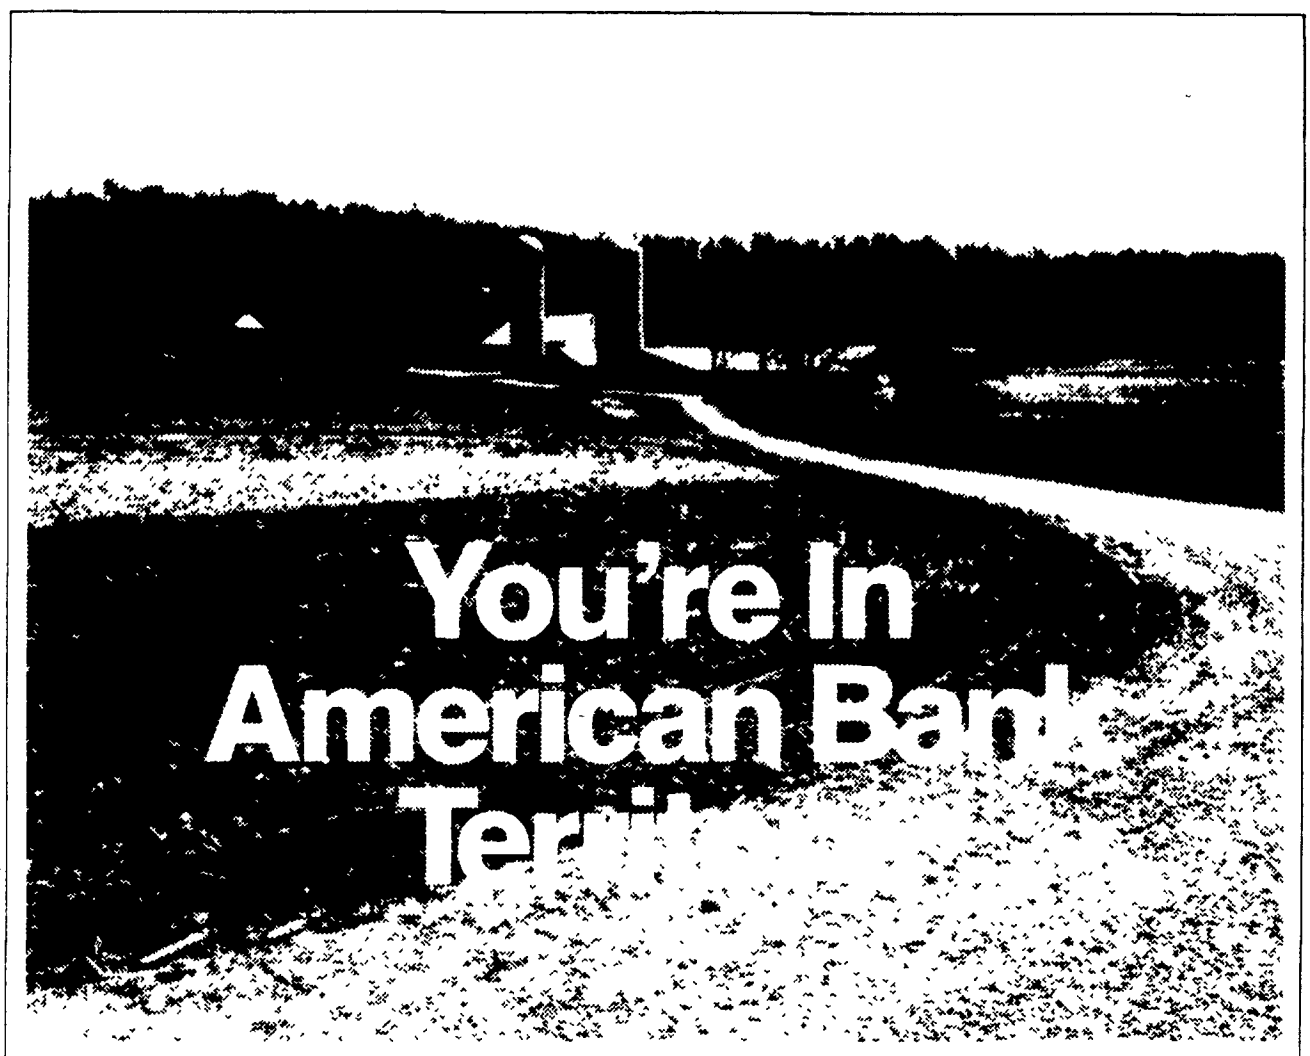
"This plan will call for all sectors of the farm financial community, including producers, commercial bankers, and Federal financial personnel to cooperate in an effort to provide timely operating loans," said Helms.

"This certinly is not a long-rang answer to the problems in rural America. It is a temporary solution for this lending season, but an effective one.

As our farmers know, these actions are no substitute for profits. During consideration of this year's farm bill, we must use that opportunity to make long-overdue changes in the government credit policy. And, we must also make necessary changes in farm policy to ensure that farmers can earn profits in the marketplace and earn increased income in the future," Helms concluded.

A significant aspect of the relief measure is a comprehensive review of agricultural policy through the establishment of a Farm Credit Coordinating Group. The group will include the Secretary of Agriculture, Chairman of the Federal Deposit Insurance Corporation, Comptroller of the Currency, and other Treasury, USDA, and Farm Credit Administration officials. They will be responsible for coordinating the activities of the various government and private organizations involved in agricultural lending in dealing with current credit problems. Guarantees for operating loans will be provided to producers who have loans with failed financial institutions. Agencies with oversight of the nation's financial system will coordinate to ensure that banks provide reasonable forbearance with viable producers who may be experiencing temporary financial difficulties.

Also, USDA will institute credit hot lines, ease restrictions in recruiting members of credit support teams, and solicit state government and commercial bank personnel to aid Farmers Home Administration personnel in processing loan applications.



A farmer's life isn't always good weather and bumper crops Sometimes you need financial help. That's why it's good to know that American Bank's Agri-Business Department has regional offices throughout southeastern Pennsylvania. There's one nearby to help you

Our regional Agri-Business offices give you something most banks can't. Understanding. Our Agri-Business experts live and work in your area. Each has a solid farming background, combined with years of banking experience Our special understanding means that loan decisions are made quickly, right in your local branch office

Along with the personal attention we'll give you, American Bank has the resources you need.

When you need farm loans, or any banking service, see the American Bank Agri-Business specialists near you. It's good to know you're in American Bank territory.

BANDED OR IN-FURROW

COUNTER®. BROADEST-SPECTRUM INSECT CONTROL. GUARANTEED.

Conservation tillage is helping save valuable topsoil from erosion. But trash on the surface provides a home for a complex of pests waiting to attack your corn crop. So you need protection that's best for today's conservation tillage practices.

Choice Of Application

COUNTER® systemic insecticide-nematicide is right for conservation tillage, applied banded or in-furrow.

In-furrow, COUNTER cuts through the clutter, and concentrates protection where it can't be diffused by heavy trash or blown away. In cleaner fields, COUNTER is a natural for banded application. But either way, COUNTER delivers the broadest-spectrum control you can get.

Guaranteed Seed Safe

COUNTER is tough on corn pests, but won't harm your seed, even applied in-furrow. Guaranteed.

CORN PESTS CONTROLLED—IN-FURROW APPLICATION

	Corn Rootworms	Seed Corn Maggots	Seed Corn Beetles	Wireworms	Symphylans	White Grubs	Flea Beetles	Billbugs	Cutworms	Nematodes	Lesser Corn Stalk Borer
COUNTER®									S		S

NOT LABELED FOR IN FURROW APPLICATION

CORN PESTS CONTROLLED—BANDED APPLICATION

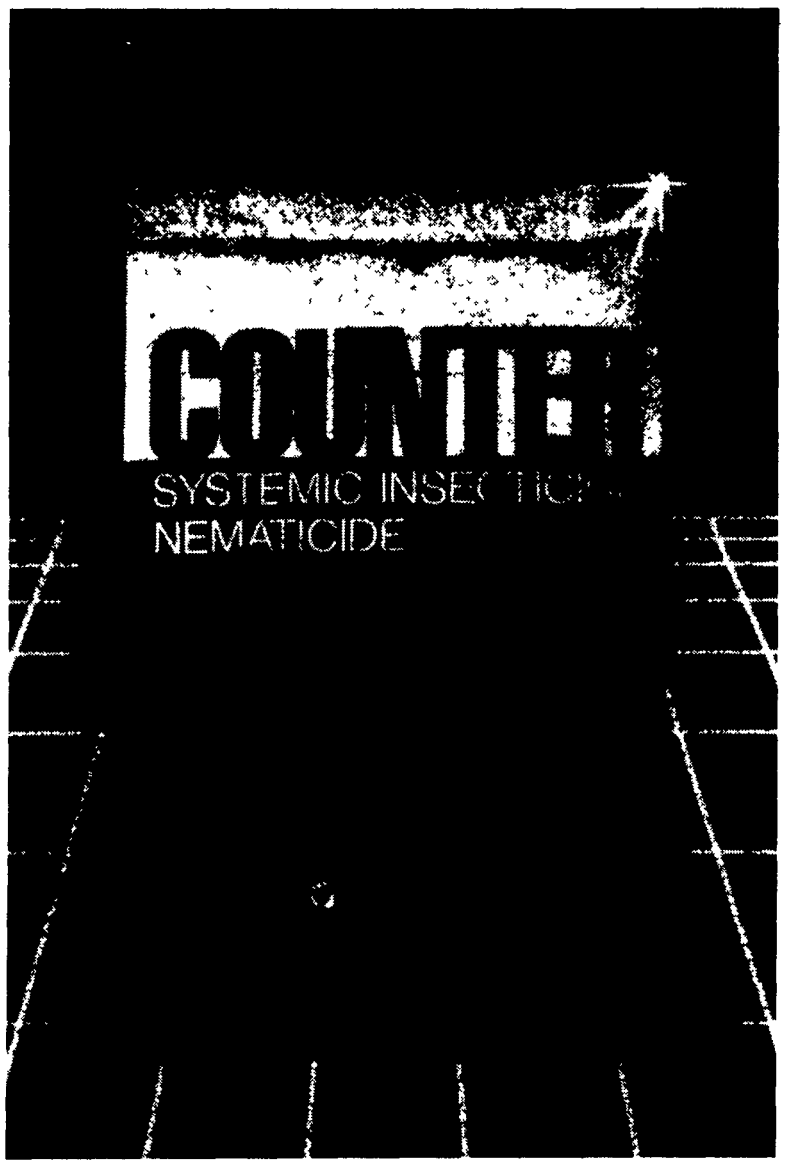
S-Suppression ¹Trademark Dow Chemical Company ²Trademark Stauffer Chemical Company ³Trademark FMC Corporation
Based on available published labels as of 9/27/84



Guaranteed Broadest Spectrum Control

COUNTER controls more major corn pests with no known resistance. Since 1975, university tests in the Corn Belt have shown COUNTER, banded or in-furrow, to be the most effective corn insecticide available. And COUNTER delivers cutworm suppression. Guaranteed.

Two-Way Protection

COUNTER works on contact to control pests in the soil, and systemically, for early-season protection throughout the plant. So your crop gets off to a fast start for a strong, even stand.

COUNTER Flexibility

Whatever your cultural practices, conventional or conservation tillage, banded or in-furrow application, COUNTER delivers the best protection against the complex of pests that attack your corn crop. Guaranteed.

Always read and follow label directions carefully.

"On the road again" with Schnupp's Roast-A-Matic

LEBANON — Billows of steam cascade through the cold winter air, and a smell faintly reminiscent of fresh roasted peanuts teases the nostrils. From within the steamy cloud come the thundering sounds of chugging motors, tumbling grains and roaring flames.

Schnupp's Roast-A-Matic is on the road again, turning another batch of raw farm grain into a digestible, protein or starch-rich feed ingredient.

Roast-A-Matic is the business brainchilded fourteen years ago by former poultryman Dale Schnupp, of Lebanon R6. Today, that business is operated by the ag entrepreneur, his wife, Velma, who handles the office work, their three daughters lending a hand on the phones, and a staff of employees who design, build and operate these interesting processing machines.

More than 3,000 farmers, either directly or through custom-operator owners of Roast-A-Matics, utilize roasted grains from the unique process in their feeding programs. Although cutomers today hail from the Atlantic seaboard to Nebraska, and from Tennessee to the Canadian interior, Dale Schnupp was once ready to "throw in the towel" on the whole idea.

While working as a former grain cleaner operator for the Reist Seed Company, along with running the family's 18,000 layer business, Schnupp occasionally ran across cleaning customers with an interest in roasting their own soybeans for feeds. Bean roasting had enjoyed a surge of interest about 25 years ago, but never met with very notable success from the feed utilization angle.

Still, three of Schnupp's farmer friends wanted to get into on-farm roasting and feeding of soybeans, but were reluctant to sink a financial investment into the needed equipment.

"That was the birth of the idea," Schnupp relates.

Admittedly, business was slow at first. Not only were farmers not acclimated to the idea of roasting and feeding their own raw grains, but earlier experiments simply had not shown convincing results from the feeding end.

And Schnupp's early customers, for the first three years, just were not seeing the results they wanted either. By the fourth year, Schnupp figured the whole idea was something of a failure, but the reason was that the beans simply weren't being roast hot enough.

He speculated that he had nothing to lose, and redesigned the process to slow down the bean flow-through and gain a higher temperature.

"I figured I had already lost anyway, and decided I'd try anything at the point," says Schnupp, remembering that period of the business in which he seriously considered simply selling out all the equipment.

"It was against all better knowledge at the time. The thinking was that, if the grain was heated that hot, there'd be nothing left."

For three months, Schnupp experimented with the higher-heated beans for his customers. Feeding results, better producing livestock, and happier customers soon told him it had been a gamble that would pay off.

"Business started to snowball," he says of the turning point in the grain-roasting venture. Growth over the ensuing years has underlined the need for this on-farm roasting service.

But the move to get the beans to a higher temperature created a slowdown in per hour volume, and Schnupp continued to seek ways to devise a more efficient process, while working out "the bugs" of the grain roasting business.

Four years ago, Schnupp made what he now calls his "second best move," and began to build his own Roast-A-Matic machines. He operated his own machines on the road but there was a mushrooming interest by farmers who wanted their own.

What the roaster does is sterilize and pre-digest grains. In the case of soybeans, the heating process breaks down the oil cells and destroys two toxic enzymes present in beans in their raw state.

Billowing "bean steam" lends a sort of unearthly look to area farms as the Schnupp Roast-A-Matic processes soybeans for use in livestock rations. Once heat-roasted, grains can be stored for longer periods of time without spoilage.

In high starch grains, such as corn, the heat causes the starches to begin converting the sugar, predigesting the product and making it easier for utilization by the digestive systems of animals.

Molds that foster spoilage are also destroyed in the heating, making it possible to store grains more readily, and any low-level spray residues are eliminated as well.

"It basically goes back to a more natural feed product," assesses Schnupp, after a decade of perfecting roasting techniques, mostly through trial and error.

Beans are continuous-flow metered at a controlled rate into the machine and fed into a rotating drum, similar to a cement-mixer set-up. A propane-fired open flame shoots into the drum; and as the grain turns, it makes about five passes through the flame while moving through the drum. Grain gets about a half-minute of actual flame exposure, heating to a temperature of 240-250 degrees. Since the grain is constantly moving, overheating or burning at any one spot is avoided.

Initially, Schnupp roasted grains at the rate of three tons per hour, then about nine tons with a second machine he had purchased. With his own roasters, volume has been charted as high as 18 tons per hour, but the average is about 15 tons for most processing.

Because it is the actual exposure to an open flame that does the sterilization and pre-digestion, this process of handling raw grains, he says, is considerably more efficient than standard grain drying. In standard processes, fuel is used to heat the air around the grains, and the air in turn dries the grain.

"That puts us into a whole new market," figures Schnupp. "A roaster can be used in place of a grain dryer. Quite a few farmers are now doing that, and seeing better feeding results."

Grain producers cannot yet expect to see a better market price for roaster-processed grains, over those dried by standard methods. However, Schnupp does foresee a day when the market will reflect the feeding value added to grains by roasting.

No real studies have been done in the past by university or ag business researchers on grain roasting, but a few facilities are now taking a comparative look at the finished product against standard-handled grains.

Initially, the business got its foothold in the feeding programs of local dairymen, but other producers began tapping into the idea when faced with piles or bins of spoiling grains. Schnupp recounts one instance when grain that was "ready to be hauled back out to be dumped on the fileds," was roaster-processed, and instead salvaged as a useful feeding by product.

Paul Lehman, son-in-law of Dale and Velma Schnupp, operates one of the two Roast-A-Matics kept on the road in Pennsylvania and adjoining states.

Pork producers have in recent years jumped on the roaster bandwagon, with some tallying up to ten percent in feed savings and keeping Schnupp's firm scrambling to keep up with demand. One 200-sow, farrow-to-finish pork producer related to Schnupp that, in the three years since he began using roasted grains, he's not paid a single veterinarian bill.

Canadian farmers are displaying a boom-business interest in roasters, too, and Schnupp spent a great deal of time over the last few months setting up a distributorship in Ontario.

The Roast-A-Matic company keeps two roasters on the road, primarily serving counties surrounding the Lebanon production site, plus into Maryland and Eastern Shore areas. Numerous other roasters are now owned by farmer-custom operators who process for their neighbors, including one owner as far away as the western border of Nebraska.

With a definite niche already carved into the feed business, Schnupp is taking roasting one step further: he's hired a nutritionist to work with customers on setting up their own feeding programs based on the roasted home-grown grains.

"This gives farmers just one more possibility for their feeding programs," is how Schnupp sums up this roasting business he's pioneered.

Paul Lehman monitors the speed of grain flowing into the roaster's rotating drum, where it passes five times through a propane-fired open flame, sterilizing and pre-digesting raw feedstuffs.

THE BEST VALUE IN GRASS HERBICIDES FOR CORN IS ALSO THE BEST PERFORMER.

Lehigh Valley Farmers schedules annual meetings

ALLENTOWN – Lehigh Valley Farmers, the Lansdale-based dairy cooperative, has taken a novel approach to this year's annual meeting–it will have two identical sessions on successive days in different cities.

Chairman Alpheus L. Ruth announced that back-to-back meetings have been scheduled next month in Wilkes Barre and Hershey to increase attendance from the members of the cooperative. The milk producers have been encouraged by Ruth to attend the meeting that is most convenient for them.

According to Mr. Ruth, "the board of directors felt that making it easier to attend would enable more LVF members to get together and learn about the progress of our cooperative."

Dr. L. S. Mix, director of farm management research and development of the Agway Corporation.

The first meeting will be held on Thursday, March 21, in Genetti's Convention Center in Wilkes Barre. The second will be held the next day, Friday, March 22, in Hershey Lodge and Convention Center in Hershey. Both meetings will begin at 10 A.M.

Agendas will be identical, with Chairman Ruth presiding at the business sessions in which the year-end results will be reviewed.

Running concurrently with the business meetings will be a special homemaking program for ladies.

The luncheon programs also will be similar, with the same guest speaker appearing in both Wilkes Barre and Hershey. Dr. Lewellyn S. Mix, director of farm management research and development of the Agway Corporation, will speak

Dr. Mix, who has held several important positions at Agway since 1966, is co-author of Profitable Dairy Management and author of numerous articles on dairy herd and farm management.

He is past president of Northeastern Dairy Conference, chairman of New York Holstein Milk Marketing Committee, and head of the task force of "Toward 2005," a project on agriculture, food processing and forestry, sponsored by the Northeastern Research Council.

Born and raised on a New York dairy farm, Dr. Mix is a graduate of Cornell University. His Ph.D. is from University of Minnesota.

In Wilkes Barre the luncheon introductions will be made by Josephy Way, Montgomery County Agent. In Hershey the role goes to Lawrence Yeager, Adams County Agent.

Grassland to host donkey basketball

NEW HOLLAND – The Grassland FFA Chapter of Garden Spot High School will hold their Donkey Basketball Game at the High School gym on Feb. 22 at 7:30 p.m.

Teams will be made up of Grassland FFA members and teachers in the Elanco School District.

Tickets are available from all Grassland Chapter members. For further information call Clifford Day, Garden Spot High School, 354-4031.

Gone with the wind

Brown snow tells a tale of disappearing topsoil

Open farmland and exposed soil spell erosion when winter's icy blast dislodges soil particles.

BY JACK HUBLEY

LITITZ — Like most natural resources, soil can be both friend and foe. Kept in its place, soil is literally civilization's foundation, nurturing a nation's crops and livestock, and keeping her people strong.

But when given wings through negligent farming and land use practices, soil chips away at the civilization it helped to create.

Throughout the West, wind-driven topsoil buries fences, fills roadside ditches and sandblasts cars. And during the winter in northern areas, it combines with snow to add another word to the westerner's vocabulary: snow plus dirt, or snirt. On the blustery Great Plains, where wind erosion data is compiled annually on 541 counties in a 10-state area, wind erosion has visibly damaged three million acres in November and December of last year, compared to 800,000 acres during the same period in 1983.

"And that's especially disturbing when you realize that last year was the third worst wind erosion year in the 50 years we've been keeping records in the region," observes USDA's Soil Conservation Service chief, Peter Myers.

In the East, though, wind erosion is a little-known and seldom-studied phenomenon, ranking a distant second to losses due to moving water.

"We've never really recognized it before because of water erosion," says York County SCS soil conservationist Lee Bentz, adding that, when coupled with runoff, wind erosion serves to compound the problem.

According to SCS state conservationist John Spitzer, Pennsylvania's average annual soil loss is about 5½ tons per acre, with some intensively cultivated counties ranging much higher. Lancaster County's average annual loss, for example, is 9.2 tons, with some acreage shedding as much as 17 tons each year.

In contrast to the gullies created during a springtime cloudburst, however, wind losses are more difficult to detect and assess. Western soil scientists commonly associate visibly wind eroded land with losses in the vicinity of 15 tons per acre.

Though lower wind velocities and less open country typically prevent that much loss in the East, the problem becomes evident with the coming of snow, as airborne soil leaves its signature on the clean white slate.

"Snow is proof-positive that soil is being eroded," emphasizes Bentz, adding that wind removes a uniform layer of soil in much the same way that sheet erosion occurs with moving water.

Many soil scientists, such as agronomist John Spitzer, feel that

Lebanon County/Atlantic Dairy Day

Water quality can threaten dairy animals in Southeast Pa.

BY WENDY WEHR

PRESCOTT — Lebanon County dairymen combined education and recognition at the Lebanon County Dairy Day on Tuesday, Feb. 12, in Prescott. In the morning the dairy farmers quizzed Extension specialists about two dairy health concerns, and in the afternoon Atlantic Breeders Cooperative members earned certificates for high producing herds.

Water quality and Johne's disease are two growing dairy health concerns for Southeast Pa. dairy farmers. During the morning dairy day program, Dr. Karen Mancl, Penn State water specialist, described some solutions to the chief water problems of Lebanon and surrounding counties, and Dr. Larry Hutchinson updated the dairymen on the threat of Johne's disease.

"I will discuss the treatment of private water systems," said Mancl, "because no regulatory agency controls private systems. The home owner or farmer is solely responsible for quality." Private water systems in the Southeast are contaminated by both biological and chemical agents.

"Many dairy cattle have a delicate palate and will not drink if water has an off taste or odor," she reminded the dairymen.

Bacterial contamination of spring water is a particularly serious problem in the Southeast, said Mancl. While throughout the region about 35 percent of water systems are contaminated by bacteria, a shocking 73 percent of spring water systems test above the acceptable standard for bacteria.

Illustrating her presentation with slides, Mancl carefully described the methods of disinfection that will kill the bacteria and reduce the risk of exposure to water-born disease organisms. "You want to pick something that will do a good job on the bacteria, but not on you and your cattle," she said.

The primary choices for disinfection are chlorination, iodization, and ultraviolet light. Each method has limitations and advantages, said Mancl, as the farmers quizzed her on what will best solve their problems and pose no threats to their dairy herd.

Three chemical contaminants — total dissolved solids (TDS), sulfates, and nitrates — are most common in Pennsylvania, continued Mancl, but of the three, nitrates pose the greatest threat in the Southeast.

"Twenty-eight percent of the wells tested here exceed the nitrate level," reported Mancl. Nitrates ingested from water are serious threats to human infants and all ruminant animals. The nitrates react with natural bacteria in their bodies and become nitrites.

Increased levels of nitrites in the body unite with hemoglobin and cause "methemoglobinemia," or the blockage of oxygen transfer. The nitrate threat is greater for ruminants, added Mancl, because the animals probably receive increased nitrate levels from both water and feed.

The Penn State specialist went on to explain three treatments for excessive nitrates in the water: ion exchange, distillation, and reverse osmosis.

"We're talking about a major investment in water treatment equipment for a nitrate problem, said Mancl. All of these treatments are extreme methods because nitrates like to be dissolved in the water and are very hard to remove, she explained.

Other water problems that Mancl briefly described were corrosion, which does have a health effect on ruminants, iron, and hardness.

When questioned by a member of the audience about the "quick tests" that are offered by local water equipment salesman, Mancl was quick to reply. "I would want to have water tested by someone who is not selling water-treatment equipment. It might seem a little expensive for the test, but it's nothing compared to the cost of equipment."

"If you're in business I would recommend testing once a year for bacteria and nitrates, and every three years for sulfates, TDS, and pH," said Mancl. DER conducts bacteria tests and certified laboratories do all of the water tests.

Detailed information on water quality is available in a series of Extension bulletins that you can obtain from your local county Extension office or Penn State.

Johne's Disease

Following Mancl's presentation, Dr. Larry Hutchinson, Penn State Extension veterinarian, took over the podium and briefed the farmers on Johne's disease. Johne's, or paratuberculosis, is also a special problem in Southeast Pennsylvania. Hutchinson estimated that Johne's can be found in 300 dairy herds in Pennsylvania, and perhaps 100 of those are in Lancaster County alone.

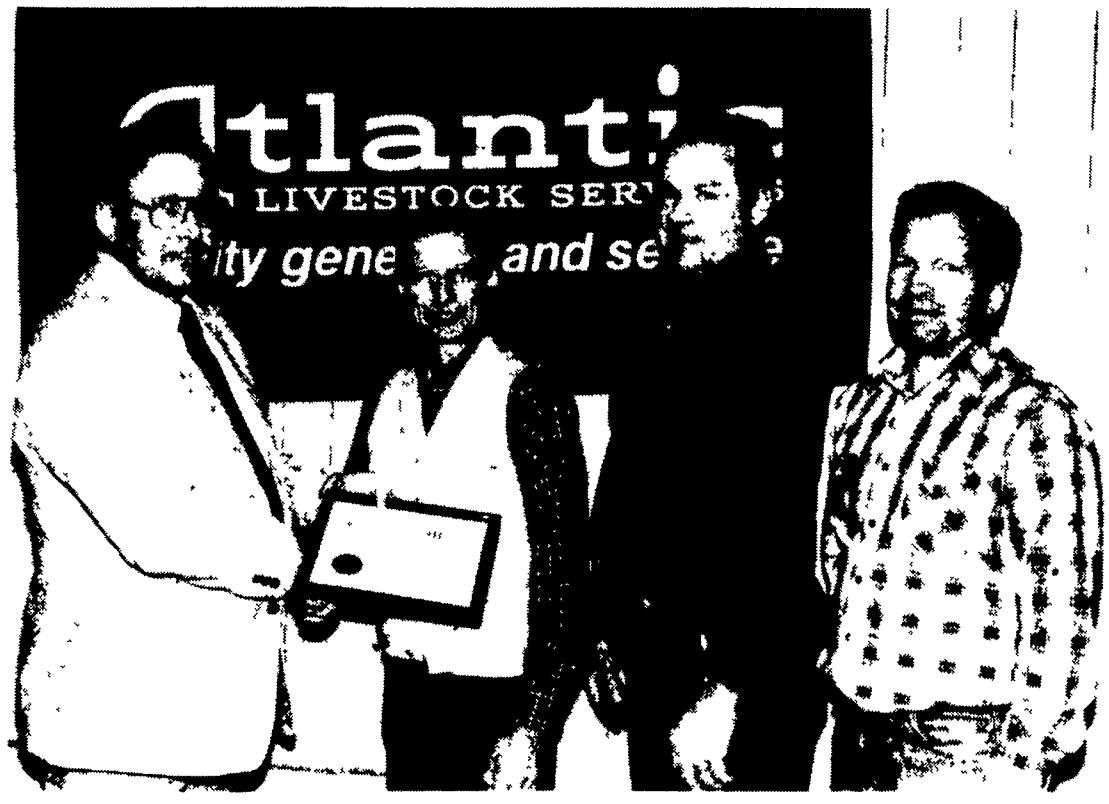
The preliminary findings from a Johne's research project being conducted by Penn State and the University of Pennsylvania Veterinary School indicate that a little under 10 percent of the dairy cows in the state have Johne's, said Hutchinson.

"The economic loss due to Johne's has been estimated at $1.5 billion per year in the United States," he noted. The economic impact to Pennsylvania dairy cattle includes death and culling, production loss and costs of sickness, tests, and quarantine.

The joint Johne's research project includes a survey of 1400 cull dairy cows in the state and a study of 20 random-sampled DHIA herds to "discover how much Johne's is in an ordinary herd." Hutchinson encouraged any farmers who received questionnaires about the cull cows to fill them out and help everyone get some answers to the threat of Johne's.

The clinical signs of Johne's include weight loss, unresponsive diarrhea, secondary mastitis, infertility and "bottle jaw." Hutchinson reminded the dairymen that the Pa. Department of Agriculture does pay an indemnity for Johne's reactors that are quarantined, appraised and slaughtered within a given time period. "That's a kind of carrot out there to persuade you to get rid of the animal," he added.

While Johne's shows up only in adult animals, the disease is picked up in the early stages of life. "Get your calves away from your cow herd as soon as possible after birth," urged Hutchinson. Controlling Johne's will require a three-pronged approach: testing, culling positive animals, and keeping calves away from the cows.



Alan Henry (left), Atlantic Breeders Cooperative field supervisor, presented production certificates to (left to right) Robert Martin, David Brandt, and Don Bollinger of Willow Maple Farm. These presentations to Atlantic members were part of the activities and programs at the Lebanon County/Atlantic Dairy Day, held Tuesday in Prescott.

Atlantic honors dairymen

In the afternoon, area dairymen were honored at the 21st Annual District III Meeting for the Atlantic Breeders Cooperative. Dairy farmers from western Berks, Lebanon, and southern Dauphin counties received certificates of merit for having high producing herds this past year.

Top DHIA averages were achieved by: Willow Maple Farm, Robert Martin, Conewago Farm - Tim Tyson, David Brandt, Mark Bomberger and Sons, Irvin Brubaker, Marvin Horst, Restful Acres - Frank Graybill, and Lloyd Burkholder.

All herds were at least 10 percent above the state average for milk or butterfat production last year, and at least two-thirds of the cows in these herds are progeny of Atlantic sires. Awards were presented by Alan Henry, Atlantic's field supervisor for the area.

District III director Harold Bollinger, of Newmanstown, informed members of the retirement of David Yoder after 41 years of service to Atlantic and to the AI Industry. Harry Roth was appointed the new general manager. Bollinger noted that management emphasis will remain on membership services.

Following a new film showing Atlantic's facilities and service programs, management representative Gary Heckman pointed out that Atlantic is dedicated to giving members the service they want by emphasizing quality technician and direct-herd service in the entire member area.

Coordinators of the Lebanon County/Atlantic Dairy Day were Alan Henry of Atlantic, and Lebanon County Extension Agent Ken Winebark. Also shown in the morning was an educational slide set on the cost of poor calf and heifer management.

Basketball star Jones promoting milk

PHILADELPHIA — Bobby Jones, defense star of the Philadelphia 76ers basketball team, will be promoting milk this month to thousands of fans at the Philadelphia Spectrum. MAMMA, the Advertising and Promotion Agency of the Middle Atlantic Milk Marketing Area, has contracted with Jones to appear on a milk growth poster. Fans 16-years-old and younger who attend the February 24th 76ers vs. Utah Jazz game will receive the complimentary poster as they enter the Spectrum.

Jones and the 76ers are experiencing a good season, with the 76ers doing well in the Atlantic Division of the NBA. Jones is one of the top defensive players in the game and was named NBA's Outstanding Sixth Man in 1983. He has sparked the 76ers to numerous come-from-behind victories over the years with last minute heroics. He has also been honored as Most Courageous Athlete of 1983 by the Philadelphia Sports Writers Association.

The poster featuring Jones is the sixth in a series of posters produced by MAMMA that feature sports stars endorsing milk. On the life-size poster Jones is pictured with a carton of milk in one hand while he palms a basketball with the other hand. The poster reads, "DRINK YOUR MILK AND SEE HOW YOU MEASURE UP TO BOBBY JONES." A scale along the side edge of the poster allows a child to measure and chart his or her growth. Colorful and aesthetically pleasing, the poster is designed to hang in a child's room for years, serving as a constant reminder that milk is essential for growth and good health.

The 76ers club is promoting the giveaway event on Philadelphia radio and at home games this month. On the day of the promotion the game announcer and electronic scoreboard will also tout, "Milk. It's Fitness You Can Drink."

In addition to the 7500 posters to be given away at the game, an estimated 500 to 1000 posters will be placed in school cafeterias in the greater Philadelphia metropolitan area.

Tickets for the game can be purchased at ticket offices in Veteran Stadium, the Spectrum, Mellon Bank at Broad & Chestnut Sts., and all Ticketron outlets. For ticket information call 76ers ticket office (215) 339-7676.

Bobby Jones "stands tall" for milk.

Ohio Corn and Soybeans Day

"Corn and Soybean Day" for farmers of eastern Ohio and western Pennsylvania will be held Monday at the Columbiana County Joint Vocational School, just south of Lisbon, Ohio on Route 45. There will be exhibits of such supplies as seeds, chemicals and fertilizers, and three or four discussion groups and lectures each hour of the day.

"The margin between costs and selling price has been mighty small this year, and according to economists will probably not get better in the coming season," says Craig Ells, of Lisbon, one of the organizers of the event. "To survive, the farmer must learn all he possibly can about economical production."

One speaker is George Sherac from Trumbull county, who is well known for the large crops of corn, soybeans and wheat he has grown with no-till farming methods in an area with "heavy" soils.

Other speakers will dislcuss weed control, varieties, fertilization, computers, farm records, income tax, forage production, and wheat growing.

Over-order pricing discussion continues

BY WENDY WEHR

HARRISBURG — Over-order pricing continued to receive attention this week from members and staffers of some key Pennsylvania farm organizations.

Representatives of the State Grange, Pennsylvania Farmers Union, and Pennsylvania Farmers Association were briefed in Harrisburg on Tuesday on the goals of RCMA, the Regional Cooperative Marketing Association, by Arden Tewksbury, RCMA advocate and active PFU member.

Although comments following the meeting indicated strong support for the concept of fair milk pricing for farmers, not all of the farm organizations are prepared at this time to join the ranks of RCMA supporters.

"We feel it's a good idea and are very receptive to it at this point," said Linda Blake, public relations director for the State Grange. But, she added in summing up the meeting, before Master Charles Wismer or the other farm representatives who attended the meeting give any official endorsement, they want figures and proof on the success of over-order pricing in other states.

The concept of over-order pricing — obtaining a milk price for farmers that is higher than the minimum Class 1 prices established under the federal marketing orders — is being pursued at this time by the RCMA. Formerly an organization of Northeast milk cooperatives, RCMA has now opened its membership to individual dairymen who ship to private handlers.

To begin negotiating for over-order pricing, RCMA must have the support of 95 percent of the Northeast dairy farmers. Gaining the support of the major farm organizations in Pennsylvania is especially important to RCMA because of the large number of independent dairy producers who must be convinced to join the over-order pricing effort.

Karl Brown, director of local affairs for the governmental regulations division of Pennsylvania Farmers Association, was particularly cautious about declaring support for RCMA following the meeting.

"Of course we believe the Pennsylvania dairy farmers should receive a fair price for their milk, and we do support the theory of over-order pricing," said Brown. "But because over-order pricing has worked in other places does not mean it can work in the Northeast.

"We need to further study this issue and some questions about the feasibility of the RCMA proposal need to be answered," he commented. PFA will study the RCMA proposal and will soon take it to the dairy committee for their investigation and consideration, added Brown.

The Pennsylvania Farmers Union, on the other hand, appears ready to join with the other farm groups to organize the dairy farmers for RCMA. "PFU is absolutely, totally in favor, and we'll do whatever we can to support RCMA," declared Cheryl Cook, PFU communications coordinator.

"The basic result of the meeting was agreement to agree," she summed up about the farm groups' probable coordination of effort on the RCMA proposal. But Karl Brown at PFA can't make any commitments until he meets with their dairy committee, which won't be before March 1, added Cook.

"We're pushing because there's a real time problem," urged Cook. We don't want to put this off until late in the spring when everyone's out in the fields and busy with spring planting, she reminded.

Arden Tewksbury also noted that they can't wait around and lose momentum on signing up farmers for RCMA. "Most of the concerns everyone has raised were pretty well answered at the meeting," he noted.

The next step will be for Tewksbury to get back to Little at RCMA. But Tewksbury is hoping that each farm group — PFA, PFU, and the State Grange — will appoint someone to head up the RCMA sign-up campaign in their organizations.

"We'll reach out by this effort, and have two or three people in charge of every county," said Tewksbury. Those people should know who are and are not co-op members, he added. Identifying where all the dairy producers of Pennsylvania are will be one of the tough projects ahead for the RCMA.

U.S. Mushroom Conference

KENNET SQUARE — The 5th North American Mushroom Conference will be held in San Diego, Ca., March 10-13, according to Nazz Paloni, Jr., President, American Mushroom Institute. Theme for the conference is, "Emphasis on Excellence".

More than 400 mushroom growers, suppliers, brokers, university professionals and representatives from other commodity groups from the United States, Canada and many countries throughout the free world are expected to attend. The conference is co-sponsored by the Canadian Mushroom Growers Association.

A large exhibit of related mushroom agri-business displays will be open during each afternoon. Each morning, seminars and workshops will be held on various aspects of mushroom growing. Several sessions will be devoted to marketing problems geared to increasing the consumption of mushrooms throughout the United States and Canada.

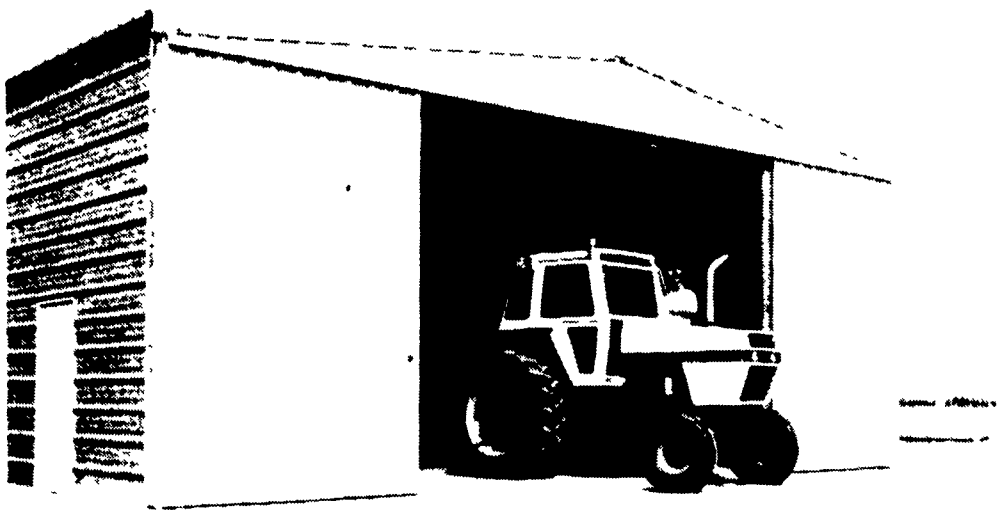
Dr. Samuel Smith, Dean, School of Agriculture, Pennsylvania State University, will speak during the luncheon session Tuesday. His topic will be "Future Mushroom Technology, from where will it come?"

Ronald Deutsch, noted nutritionist and author will be the keynote speaker for Monday's program.

Susan Peterson, of Mushrooms Etc., Camarillo, Ca., has served as chairperson for the three-day conference. She and the committee have been at work since July, 1983 making the necessary arrangements.

Not all will be work for participants and guests — The Convention Bureau, San Diego, has promised a fun-filled conference with visits to the world renowned zoo and many other local spots.

SOLID SAVINGS ON CHIEF FARM BUILDINGS



WINTER DISCOUNTS... FREE CONCRETE...BUYER'S BONUS

Savings Example: Chief all-steel farm building-40' x 60' x 15' of 29-gauge Galvalume™ with 20' x 14' double slide door endwall.

Pennfield Plans High-Tech Mill near Mount Joy

LANCASTER — A prototype feed mill, unlike any other in operation or under construction, is being planned by Pennfield Corporation in the Mount Joy Industrial Park.

The largest feed manufacturer based in Pennsylvania, Pennfield expects to spend $6.4 million on the plant, which will have the capacity to produce 60 tons of feed per hour.

"It's more than a feed mill," said Pennfield president Ernest O. Horn Jr. "It will be prototype for the feed milling industry. Its unique design will incorporate the most current technology, and its equipment and control system will be engineered to readily accept improvements in the technology of feed formulation immediately as they become available."

The 28,000-square-foot "general-line" mill will produce complete and concentrate hog and dairy rations, the company said, though the product mix could be changed at any time.

The technological innovations are the result of a cooperative arrangement between Pennfield and the plant's builders, Sprout-Waldron Division, Koppers Co., Inc., of Muncy, Pa. Company officials expect to have the plant in operation by October of 1986.

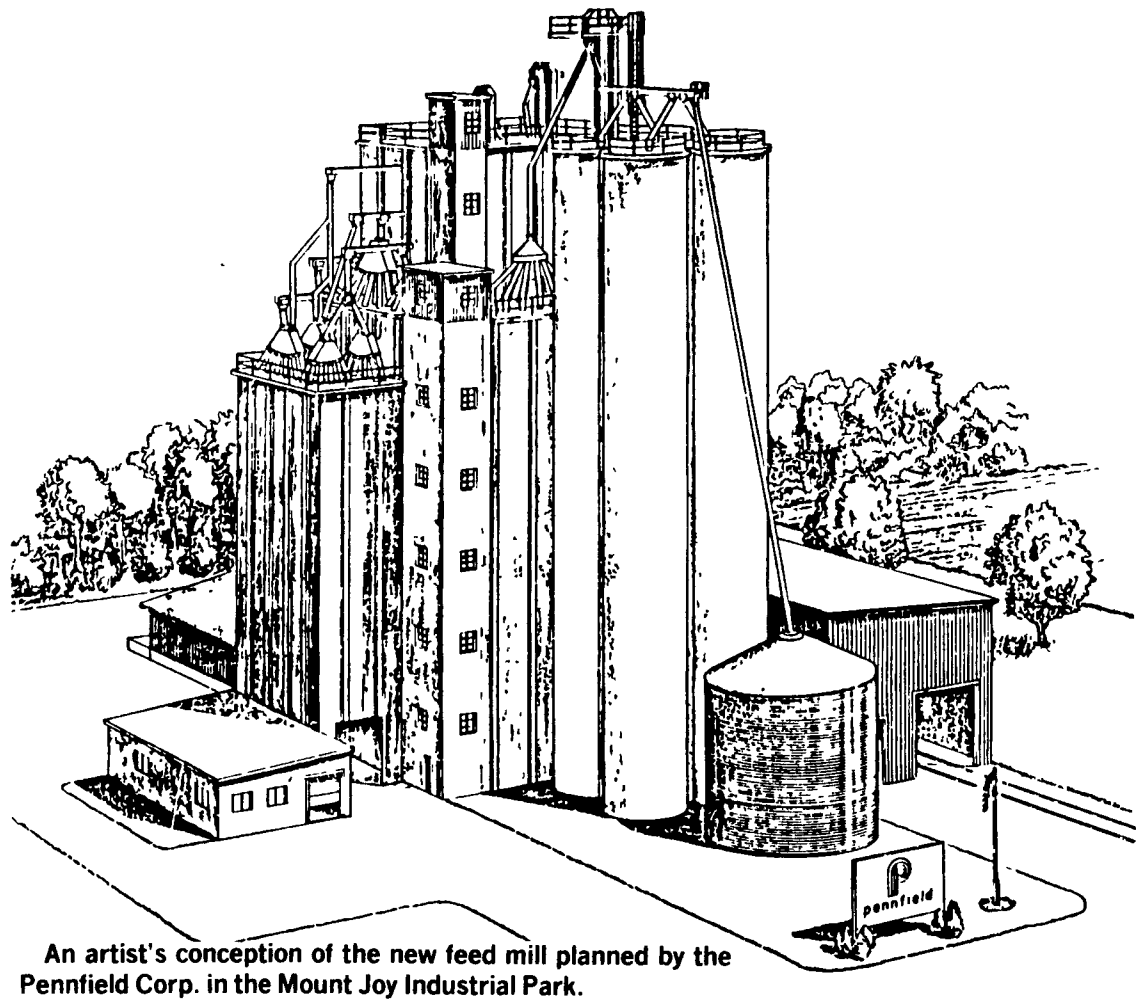
The state-of-the-art facility is expected to boost Pennfield's production to 800,000 tons annually. Sale of animal and poultry feeds account for about half of the firm's annual sales, which last year exceeded $150 million. The firm serves a variety of customers within a 125-mile radius of Lancaster.

The company's Hempfield operation, which currently produces poultry feed, opened in 1976 and was considered at that time to have the best technology available. It is capable of producing 80 tons of feed per hour.

Pennfield was formed in 1971 from the merger of Miller & Bushong, Inc. of Rohrerstown, and D.E. Horn and Co., Inc., of York. In 1982, the company bought out the Pennfield stock held by the Graybill family, and Horn assumed the presidency of the firm.

A privately held company, Pennfield also owns and operates Pennfield Farms Egg Division in Ephrata, Pennfield Farms Poultry Meat Division in Fredericksburg, and the Beachley-Hardy Seed Company in Camp Hill.

Pennfield, which is based in nearby Rohrerstown, will seek financing through the Lancaster Industrial Development Authority, according to Ken Greenwood, manager of feed production.



An artist's conception of the new feed mill planned by the Pennfield Corp. in the Mount Joy Industrial Park.

Delmarva Dairy Day to feature PSU specialists

NEWARK, Del. — This year's Delmarva Dairy Day will be held February 27, from 9 a.m. to 3:30 p.m., at the Hartly Fire Hall.

The morning speaker will be Steve Spencer from Pennsylvania State University. He will discuss what's new in milking equipment. Spencer is an extension specialist in milking machinery and formerly chaired the American Dairy Science Association's committee for the approval of milking machines.

In the afternoon another Penn State specialist, extension dairy nutritionist Dick Adams will show farmers how to use forage test results to balance feed rations. Adams is the author of several computer programs for dairy feeding.

Participants should bring a pocket calculator to this meeting. They should also bring feed and forage analyses from their own feed if these figures are available Otherwise, figures will be provided for use in making the calculations.

Lunch tickets will cost $1 and are available from county extension agents in Delaware and Eastern Shore Maryland

It's Pork Congress time

HARRISBURG — For Pa. pork producers, all roads will lead to Harrisburg's Penn Harris Motor Inn on Thursday, Feb. 21, for the seventh annual Keystone Pork Congress.

A full slate of educational seminars is scheduled for the morning, with Dr. Stan Curtis of the University of Illinois presenting an update on the animal rights issue, and James Van Horn advising farmers on how to cope with stress in today's uncertain ag economy.

And a "full-house" of nearly 50 commercial exhibitors will be on hand to showcase the latest in swine-growing technology.

Missouri producer Roland "Pig" Paul will be the evening banquet's featured speaker. The complete Congress schedule can be found in the Livestock section of today's paper

Cumberland County Holstein Club holds annual banquet

HUNTSDALE — The Cumberland County Holstein Club met at the Penn Township Firehall last Saturday for their annual banquet and to elect three new directors.

Elected to three year terms were Lee Davidson, Shippensburg; Thomas Nealy, Newville; and Edgar Showaker, Newville.

The club also recognized the owners of the highest placing owner-bred animal in each class at the 1984 South Central Holstein Show held last summer at Shippensburg. Award recipients included: Tedd Hoch, junior heifer calf; Neil Stamy, junior yearling heifer calf; Becky Dyarman, aged dry cow; Michelle Cornman, 4-year-old cow and junior two-year-old; and Steve Cornman, senior heifer calf, five-year-old cow, and 100,000 pounds of milk class.

Also recognized were John Stamy, IV, three-year-old cow; Jeff Reasner, dry three- and four-year-old cow; Mark Naugle, intermediate calf and intermediate yearling heifer; and Ed Showaker, senior two-year-old cow and aged cow.

The group also heard committee reports and enjoyed a buffet dinner. Cumberland County Dairy Princess Vonda Wickard served dairy refreshments provided by Oscar and Sarah Nealy, Herbert and Lois Shughart and J. Shephard and Marguerite Wolff.

Ken Raney, PHA director of member services, presented some of the highlights of the Pennsylvania Holstein Association activities, and Duane Duncan gave highlights of the county club's activities.

J. Kenneth Shoap spoke on "How to Get Rich in One Easy Lesson."

The Cumberland County Holstein Club recognized their outstanding junior members last Saturday at their annual meeting. From left are Tedd Hock, Shippensburg; and Jennifer Reasner, Shippensburg, distinguished junior members. At right are distinguished senior members Michelle Cornman, Mechanicsburg and Gerald Davidson, Shippensburg.

Seedling sale in Berks Co.

The 11th Annual Tree Seedling Sale conducted by the Berks County Conservation District is now underway.

The District is offering a wide variety of quality stock three-year old tree seedlings at a very low price. Pre-paid orders will be taken until March 31, 1985.

The pick up dates are Friday, April 26 and Saturday, April 27. Seedlings can be picked up at the rear of the Agricultural Center across from Berks Heim on County Road.

Varieties offered this year are: Austrian Pine, Colorado Blue Spruce, Douglass Fir, Norway Spruce, Scotch Pine, White Pine, Arborvitae, Black Locust, Canadian Hemlock, Red Maple, White Birch, and Blue Rug Juniper (ground cover). There are no quantity, planting, or use restrictions.

To order, contact the Berks County Conservation District.

Public hearing for Conestoga Ag Preserve scheduled

LANCASTER — On Wednesday evening, February 20, a public hearing will be held at 7:30 p.m. at the Conestoga Fire Hall. The hearing is sponsored by the Lancaster County Agricultural Preserve Board and is intended to hear public comments about the establishment of an Agricultural Preserve in northern Conestoga Township.

Preserving the most productive of our agricultural land resources is one of the most importnat issues in Lancaster County's future. Lancaster County's production tops all non-irrigated counties in the nation. Indeed, our local production exceeds that of 15 different states in the nation. The scenic, productive and cultural qualities of our farming landscape are unique and unsurpassed. Lancaster County is a very desirable place, so we continue to grow in population and to chip away at our most valuable resource at a rate of several thousand acres every year.

In 1975 Lancaster County adopted Directions: A Comprehensive Plan for Lancaster County, Pennsylvania in which more than 100,000 acres are planned for future growth and development and 278,000 acres of the best farmland outside of planned growth areas are planned for coutinued agricultural use.

Conestoga Township took a step towards preserving farmland in 1980 by adopting protective agricultural zoning which does not permit extensive non-agricultural development. To date 24 of the 41 townships in Lancaster County have adopted similar "effective" agricultural zoning.

Toward strengthening the resolve and commitment to farmland preservation, the Lancaster County Agricultural Preserve Board has identified and proposed an AGRICULTURAL PRESERVE in the northern part of the Conestoga Township.

The area is more than 1,900 acres of very productive farmland where soils are predominatly Class I, II and III under USDA productive capability classifications and where land is both planned and effectively zoned for agriculture.

The effects of establishment of the proposed Conestoga AGRICULTURAL PRESERVE by Lancaster County will be:

- A new policy area in which normal agricultural activities are given added protection and insulation from nuisance complaints and suits.
- A new policy which will discourage and steer away or prohibit new unplanned highways, public facilities and public land acquisition from occuring in the Preserve
- Priority and eligibility for qualified farm owners in the Preserve to voluntarily participate in Lancaster County's preservation deed restriction program including deed restriction donation or sale, right of first refusal agreements and possible last resort purchase-preservation and resale of farms faced with conversion to other uses.

The Agricultural Preserve is intended to be a means toward saving farmland from conflicting development, to result in a more permanent agricultural resource and to target preservation benefits to those areas most important to the future of agriculture, and to exclude those areas necessary and planned for future growth.

Landowners will have a new set of options including voluntary deed restriction donation with significant tax benefits or the possibility of compensation through an incentive deed restriction sale on a voluntary basis.

The Preserve will be a targeted priority area for farmland preservation in Lancaster County.

Landowners and interested citizens are invited on the evening of February 20th, to receive more detailed information and to offer comments and pose questions about the proposed conestoga Agricultural Preserve.

The Township has endorsed the concept and the Lancaster County Agricultural Preserve Board looks forward to a great deal of interest and participation in the public hearing.

Prior to or following the public hearing, the Agricultural Preserve Board can be contacted at 50 North Duke Street, P.O. Box 3480, Lancaster, PA 17603, or by phone at 299-8355.

State Senate Ag Committee backs two farm measures

HARRISBURG — The Senate Agriculture and Rural Affairs Committee unanimously voted to report two pieces of legislation affecting the agricultural community of Pennsylvania during a meeting held here today, reports Sen. Edward W. Helfrick, chairman.

In their first official action of the new legislative session, the Committee favorable released a resolution which will "memorialize the governor to proclaim March 20, 1985 as Pennsylvanic Agriculture Day," says Helfrick, who sponsored the legislation. "This proclamation coincides with the national celebration of Agriculture Day. We hope farmers and non-farmers alike are made more aware of the importance of our state's number one industry through observances of this kind."

Another Helfrick-sponsored bill, Senate Bill 310, also moves one step further to becoming law. This legislation creates an Agricultural Product Development Commission which is designed to channel public and private funds into efforts to expand the state's existing agribusiness, explains Helfrick.

"It is more important than ever to keep Pennsylvania-grown and processed foods out in front of the competition," declares Helfrick. "My bill also is designed to help promote our state's image as an agricultural keystone, supporting the nation's farm industry, along with being a top manufacturing state."

Senate Bill 310 provides for an initial $100,000 appropriation to be used in establishing the Commission. The members of the Commission include ten appointments made by the governor. These ten will be selected from a list of persons suggested by statewide farm organizations, commodity groups and food processors, plus non-agricultural groups. Also serving on the Commission will be the Secretary of Agriculture and the minority and majority chairmen of the House and Senate Agriculture and Rural Affairs Committees. Members will serve for non-consecutive three-year terms.

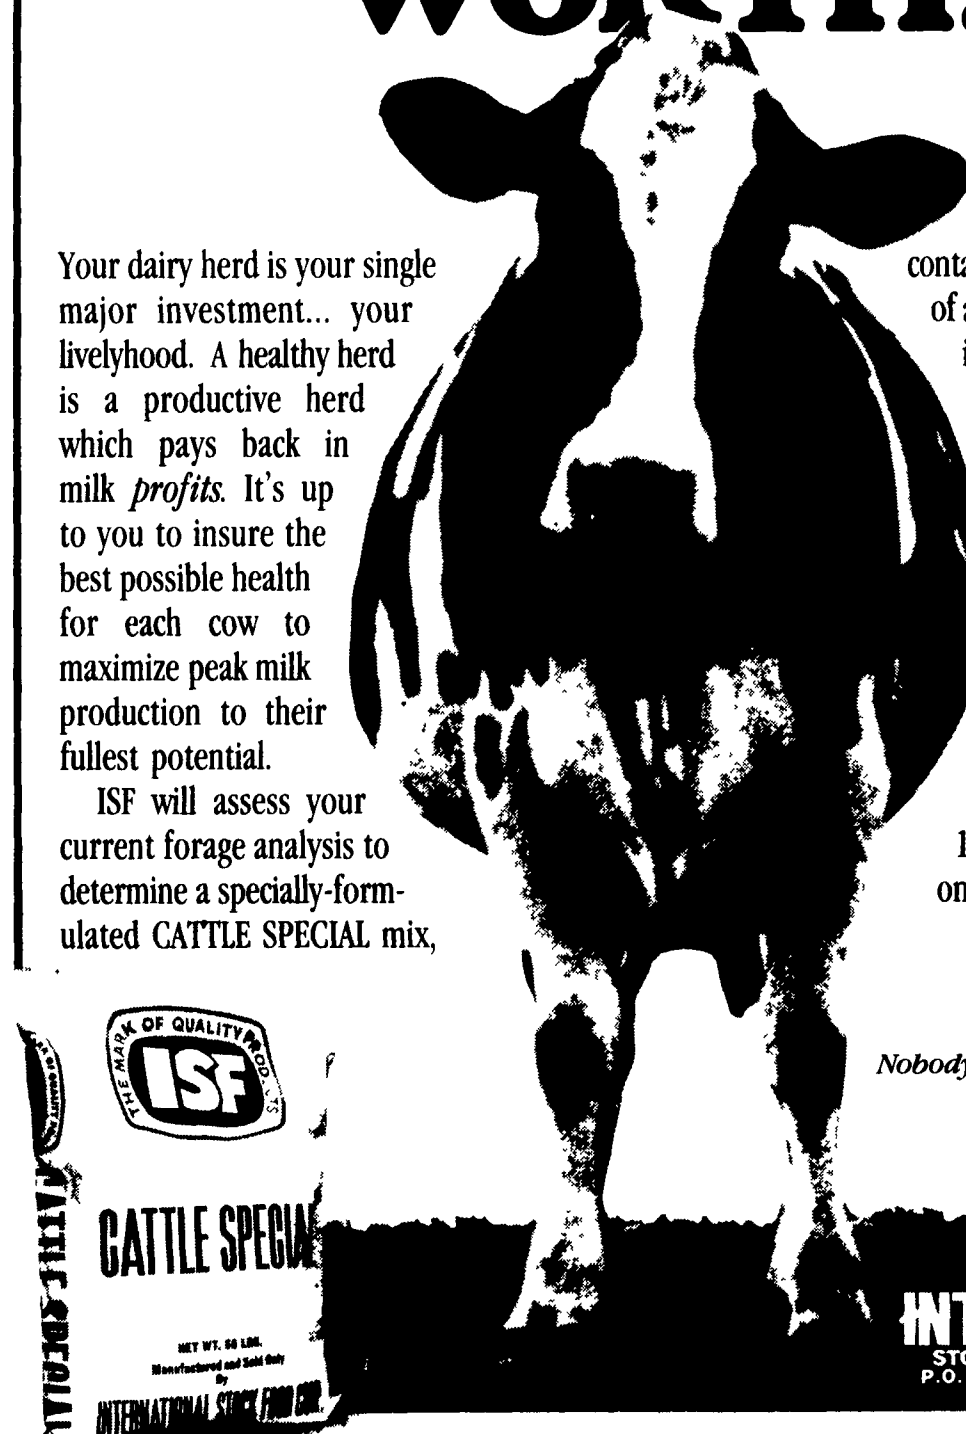
"The Commission will be authorized to expend monies to conduct research and promotional activities," says Helfrick. "These funds can be from federal, state or private resources with which the Commission establishes a contractual agreement for conducting this work.

"I expect to see both of these pieces of legislation move quickly through the Senate, and I have received indications from fellow legislators in the House of Representatives that swift passage is likely on that side of the General Assembly," comments Helfrick.

Cosponsoring Senate Bill 310 are: Sen. Noah Wenger, vice chairman of the Senate Agriculture and Rural Affairs Committee; Sen. Patrick Stapleton, minority chairman; and fellow senators Mark Singel, John Shumaker, James Ross, James Rhoades, John Peterson, Roy Wilt, Jeannette Reibman, David Brightbill, Craig Lewis, Doyle Corman, and Roger Madigan.

Senate Resolution 9, the Pennsylvania Agriculture Day legislation, is cosponsored by Sens. Noah Wenger, Patrick Stapleton, James Ross, Tim Shaffer, Michael O'Pake, James Rhoades, Roger Madigan and Roy Wilt.

MILK HER FOR ALL SHE'S WORTH.



Your dairy herd is your single major investment... your livelyhood. A healthy herd is a productive herd which pays back in milk *profits*. It's up to you to insure the best possible health for each cow to maximize peak milk production to their fullest potential.

ISF will assess your current forage analysis to determine a specially-formulated CATTLE SPECIAL mix, containing an exclusive blend of alkaline-buffered mineral ingredients and vitamins to meet the nutritional requirements of your Winter feeding program. Contact your local ISF Representative today and increase profits by getting your milk's worth from your herd. Or call 1-800-252-4620 (in NY only) or 1-800-847-1691 (outside NY state).

Nobody knows cattle minerals like we have.

North Tier Co-op learns of new extension programs

By Jane Bresee

A most impressive mixture of people braved the coldest, windiest, day of the winter to attend the 8th Annual Northern Tier Regional Cooperative Extension Association meeting at the Wysox Presbyterian Church, February 8.

State Senator Roger Madigan, Representative Scot Chadwick, Sandy Major, assistant to Representative Carmel Sirianni, and County Commissioners from each of the five northern couties, Bradford, Sullivan, Susquehanna, Tioga and Wyoming, were present. Extension staff, executive committee members from each county, and the program speakers brought the attendance to about 60 people.

In the absence of Gary Green, because of illness and Richard Packard, president and vice-president of the Regional Association, Veto Barziloski, Extension executive committee member from Wyoming County chaired the meeting.

Dr. Richard Phillips, Penn State Agricultural Program Leader, outlined the programs that Extension is providing this coming year. The Farm Management Program is designed to help the 5000 farm families in Pennsylvania who are hurting financially, he said. These people rarely come to the workshops, so the Program will first identify them by working with the banks, Farm Credit and county agents. Then the Program will develop newsletters, conduct workshops, and give them individual counseling to help them with their financial problems.

The Chesapeake Bay Project is also uppermost in Extension programs, Phillips continued. With the state and federal monies that have been funded for the Bay cleanup, the Extension will be working in cooperation with the Agricultural Conservation Service (ASC) to reduce run-off of nutrients and ground water pollution. It will set up a mobile lab to take soil samples and nutrient level readings of manure, and to find out what fertilizers should be applied to match crop needs. It will also work with the DER to find a quicker and more reliable test for nitrogen in the soil, Phillips said.

Extension Ag Engineering has hired a water quality person to work in the area of underground water contamination, he stated.

Also the Regional Extension agents working out of the Lancaster County office will explore alternate ways of handling manure, he continued.

Crop Management Associations in individual counties have worked so well, Phillips continued, that a state coordinator, Mel Brown, has been hired to establish Crop Management associations in other counties, to look at (crop) insurance, and to set up computer programs for soil cost analysis of crops.

The final program that Dr. Phillips discussed was the new computer network now established in each of the county extension offices. Seven programs of software are in each county office now and six or seven will be coming along every month, he said. It will try to continue to fine tune farming to make the precise decisions that will make farming profitable in Pennsylvania, he concluded.

Dr. Karen Mancl, Extension Agricultural Engineer, told the group that people don't turn out for Water Quality Programs unless there is a crisis situation. In Venango county recently over 200 people came to a meeting to talk about water pollution from gas drilling.

The major emphasis of her work is treatment of private water systems, which affect individuals on a daily basis. Private water systems show the impact of waste disposal and are the sole responsibility of the family whether it is a single dwelling or a farm with livestock.

Sixty percent of the wells in Lancaster County are contaminated with nitrates, but bacteria contamination is the biggest problem in the northeast, she said. The wonderful spring water we all like for the taste is most likely to be contaminated with bacteria. Wells deeper that 80 feet are the safest.

The Chesapeake Bay Study has shown that the Susquehanna River contributes half of the water into the Bay but 70 percent of the nitrogen which is leached underground or is from direct run-off. The farmer is not only contaminating his own water supply, she stated, but also the Bay.

As chairman of the Waste Management Task Force, she is exploring various ways to lower the cost of on-site waste water treatment. The way to save money, she stated emphatically, is not to build the lowest cost treatment plant. The cost of running sewage lines is the single biggest expense, and she is investigating alternative ways of waste treatment to avoid this expense.

Dr. Mancl said she has written multiple short educational pieces on waste management which can be obtained at Extension offices as a method of educating the public about their responsibility. She is also looking forward to going to a meeting of sewage officers from each county and telling them how to best manage their sewage problems.

Referring to contamination of water supplies from gas drilling, she said that landowners in the test area should have their water tested by a reliable laboratory prior to any drilling. This would provide a benchmark for both the quality and quantity of their water supply should this deteriorate during the drilling. The lease holder may be protected by his lease, she said, but the neighbor is not and the only recourse he has should his water be contaiminated or decreased is to sue the drilling company.

Dr. Richard Phillips and Vito Barziloski of Wyoming County engage in followup discussions after the Northern Tier Extension meeting.

York deadline

The deadline to enroll in the 1985 feed grain and wheat program is March 1.

Program requirements for acreage reduction are 10% for feed grain (no payment), and 30% for wheat (payment on 10%).

Advance payments are 50% for feed grain, wheat deficiency and wheat diversion programs.

Special sign-up locations will be conducted from 9 a.m. to 3 p.m. on the following days. Feb. 19, Stewartstown Milling; Feb. 20, Neuhaus'es, Glen Rock; Feb. 21, Wayne Feed, Dillsburg; Feb. 22, Farmers Bank & Trust, Baltimore St., Hanover.

Enrollment deadline for the 1985 Agricultural Conservation Program is March 30.

Alfalfa growers demand the best.

Alfalfa growers expect the most from their alfalfa variety. Like the highest yield, the best quality and multiple pest resistance. That's why more and more growers are planting Cimarron Alfalfa.

Profit with a proven variety. Cimarron is consistently a top producing alfalfa, both on the farm and in university tests – not only in total yield but in crude protein content and TDN. It's an extra leafy/full season variety with excellent stand persistence.

Cimarron offers resistance to a broad spectrum of diseases and insects such as Phytophthora root rot, bacterial wilt, Fusarium wilt, anthracnose, Sclerotinia crown and stem rot, Stemphylium leaf spot, common leaf spot, pea aphids, spotted alfalfa aphids and the alfalfa weevil. No other variety can match Cimarron's combined pest resistance.

High yield...extra leafiness...excellent quality... multiple pest resistance.

Shouldn't *you* demand Cimarron?

Erosion

(Continued from Page A25)

wind erosion is not, in itself, a serious problem. "In my opinion it looks worse than it really is," says Spitzer, referring to Pennsylvania's brown-tinted snowbanks. But he does acknowledge that the wind serves to compound the water erosion problem.

Though no data are available on how much soil takes to the air in Pennsylvania each year, Lee Bentz feels that a comparison to lime may help to put the problem into perspective.

"Lime is often spread at about 2½ tons per acre, which amounts to a depth of one sixty-fourth of an inch, or just a dusting," he says. 'It seems reasonable to assume that we could lose that much during one windstorm. That may not sound like much, says Bentz, until we start to consider how many windstorms occur during the winter."

Assigning a value of $10 per ton to topsoil, Bentz notes that a single windstorm could then be devaluating farmland by $25 per acre.

"Cover is the key to conservation," says Lancaster County SCS conservationist Warren Archibald, pointing to fall plowing as a major contributor to winter soil loss. Two other factors, he says, are the increasing size of fields and the loss of protective fencerows.

Lee Bentz agrees with Archibald's assessment of fall plowing, saying that the practice should be used only when necessary to control weeds, diseases or insects. Wherever fall plowing is practiced, he says, pronounced ridges and valleys should be left to help trap blowing soil.

All soil experts agree that the best way to keep topsoil on the farm is to cover it with crop residues or plant a winter cover crop.

"Anytime you can get something on the soil, it's going to help," says Penn State Extension agronomist, Dr. Doug Beegle. He notes that several cover crop options are available, with rye being the most popular.

"If it's planted in early October, right after the corn is harvested, it'll get a pretty good start," he advises. A lot of farmers take it off for silage in early in spring, or use it as a green manure."

He also points out that rye makes a good no-till cover crop and helps to stop nutrient leaching. "Most of the time if we had nitrogen there last year, it'll be gone by next year, but rye tends to hold it. You also get what is called 'nutrient pumping', when the plants extract nitrogen, phosphorus and potassium from deeper in the soil and hold it in their roots. Rye isn't used as much as it should be," says Dr. Beegle.

Dr. Beegle says that other cover crop possibilities include the winter annual legumes. Hairy vetch, for example has been fixing over 100 pounds of nitrogen per acre in Delaware and Eastern Shore fields, he says. But Pennsylvania's growing season is too short to realize much benefit from this crop, says Beegle.

One crop that is showing promise as a permanent cover is crown vetch. Beegle notes that Penn State professor Dr. Nate Hartwig has found that crown vetch can be chemically suppressed in the spring before corn is no-tilled into it. By the time the crown vetch starts to recover, shade provided by the corn will slow its growth. Then as the late season corn leaves begin to wither and admit sunlight, the cover crop begins to grow again.

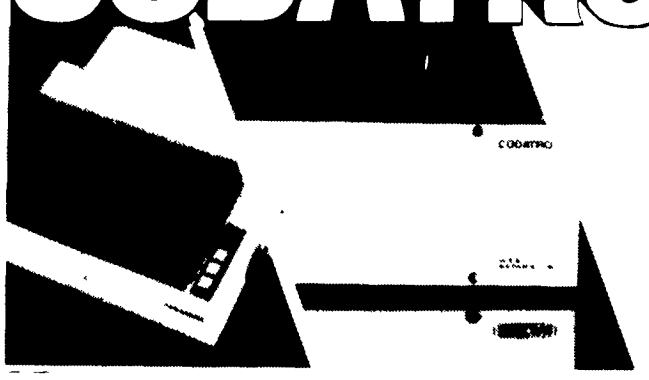
Research also indicates that crown vetch can be treated with the normal amounts of herbicides for weed control, without killing the cover crop.

"I look at soil as money in the bank," says Lee Bentz. "Soil is your principle and the crops coming off that land are your interest. When we start farming too hard, we get into that principle. Preventing winter erosion doesn't have to be expensive, and it will pay for itself in soil savings and increased production," he concludes.

WESTFALIA HIGH TECH DAIRYING®

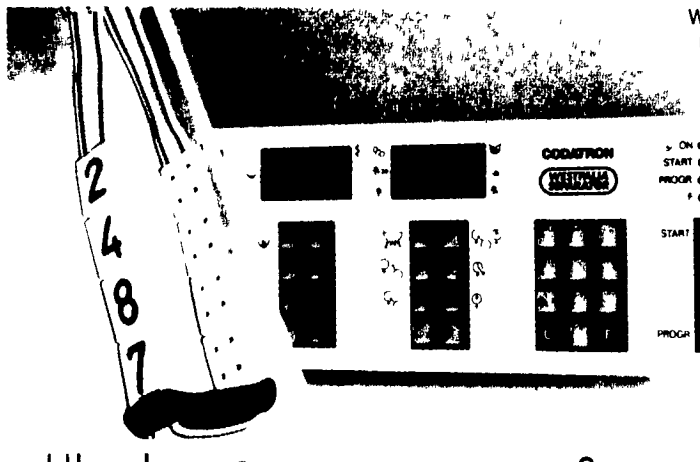
CODATRON

WESTFALIA SYSTEMAT



Individualized computer feeding system

To be successful in dairying today you know how important it is to be in complete control of your feeding program and to have all the information possible on each and every cow That's why Westfalia has developed the Codatron Individualized computer feeding system With Codatron, milk production and profits can be maximized while minimizing health problems, thanks to an early warning system And unlike many other units Codatron is an expandable system that won't become obsolete



The feeding system is quality built and basically foolproof and automatic You'll have dairy reports of herd conditions and performance Ration adjustments can be made quickly and easily You'll be alerted to problem cows fast

The Codatron is available in two basic models The F 26 with feeding capabilities to 999 cows, up to 26 feeders, double ration capability with dairy consumption reports The Model L offers feeding plus breeding management capabilities

And that's not all Westfalia's Codatron is designed for expansion into parlor data milk functions and home computer interfacing Watch for new breakthroughs to be introduced soon!

Contact your Westfalia Sales Center today Find out why Westfalia is truly the leader in high tech dairy equipment

Naylor urges farm program update at Corn and Soybean Conference

BY JOHN STOKES SCHMIDT
Staff Correspondent

SALISBURY, Md. — Under Secretary Frank W. Naylor Jr., featured speaker at the 1985 Delmarva Corn and Soybean Technology Conference held Feb. 7 in Salisbury, Md., provided an encouraging message for U.S. agriculture.

Returning directly from a U.S. congressional hearing on agriculture, Naylor assessed the present state of agriculture.

"Most current established farm programs originated 50 years ago," he said, adding that there are enormous growth opportunities in Third World countries if American farmers are competitive.

National markets throughout the United States, he said, are basically mature and show little room for growth. "As farmers we need not to store our grain while waiting for other countries to sell," Naylor continued.

Instead of keeping the world supply, 50 percent of U.S. grain must go through international channels. The change must be made from a supply-oriented policy to a market-oriented farm policy. "We must be a driving force rather than holding residuals," he said.

At present, U.S. farmers determine loan rates for world markets. Foreign governments mark subsidies accordingly to establish cheaper markets for themselves. "U.S. markets can no longer 'telegraph' rates for foreign market advantages," Naylor said.

Many of these ideas will be included in farm legislation slated to go before Congress on Feb. 17. The under secretary said this is "the most hotly debated and significant farm bill ever submitted." It will give farmers a basis for future consideration of whether to expand, restrict or maintain within their individual operations.

Naylor listed the following priorities for American agriculture:

- Increase international trade (a strong U.S. dollar has the greatest impact along with controlling the national deficit.)
- Eliminate trade impediments to break down trade barriers.
- Pass sound legislation for sound business decisions into the year 2000.

"Full time farmers are under the greatest stress for obtaining finances," Naylor said. All farmers are under some stress that will require dollar adjustments and operation decisions in the next two to five years.

"Agriculture is a way of life. It provides a home and superior family life that will make these decisions especially tough," Naylor commented.

Naylor linked farm stress to the drop in land prices, noting that lender strain is severe in the midwest. In the mid-1970's, he explained, midwestern farmers borrowed large sums of money to expand their operations.

"Farmers were encouraged to acquire loans too great for their operations to support," Naylor noted. The land value was also too high. In Iowa, for example, the price of farm property is down 50 percent from 1981 assessments and may increase to 55 percent to establish true values.

"Forty percent debt to asset ratios represents severe stress," Naylor emphasized, adding that he believes the debt service for farmers needs to be restructured to manageable levels.

"Eight thousand reamoritized loans have been accomplished already this year," Naylor said.

For commercial loans, a means will be provided to lenders to use interest concession options. In farm credit relief measures announced Feb. 6, the USDA will guarantee loans from production credit associatons and similar organizations.

"This will be a viable means to improve farmers' short term problems and offer credit in the next three years for operating costs," he said.

When considering long-term financial solutions, Naylor said, "profit can't be made on loans if you are paying them. Help is needed in debt management with growers owing $215 billion.

"Even with the loss of land value, American farmland is still worth $1 trillion," he continued, noting that farmers need to clear existing debt and start fresh. However, he said, this is difficult for farmers who borrowed heavily in the '70's.

"It will take the cooperation of farmers and credit organizations to achieve positive results," he said. Washington must have input in the upcoming three or four months so legislators know what the farmers want. All major farm organizations will continue to work in Washington as they did Feb. 7 at the congressional hearing on agriculture.

In a brief question and answer session following the program, Naylor discussed the current problems confronting dairy farmers.

Guernsey Breeders plan 54th annual meeting

CHAMBERSBURG — President Albert Hack has sent out the call to the 54th Annual Meeting of the Pennsylvania Guernsey Breeders' Association. Pa. Guernsey breeders and friends will meet in Franklin County, March 1-2, at the Holiday Inn, Chambersburg.

Meeting highlights include the annual business meeting, a Johne's seminar, and the annual awards banquet featuring John McCormack, DVM, a professor at the University of Georgia.

McCormack will relate his experiences during 25 years of working as a veterinarian and his philosophies on herd health and preventive medicine.

Also a regular columnist for **Hoard's Dairyman**, McCormack specializes in animal reproduction. He has presented seminars at numerous national and international meetings for veterinarians and livestock producers, and he has received several awards for excellence in teaching methods.

The annual awards banquet will be held on Friday, March 1, at 7 p.m. Adult and junior production awards and All-Pennsylvania awards will be presented. An auction of Guernsey novelty items will also be held to benefit the Guernsey Breeders promotion fund.

During the business meeting, starting Friday at noon, reports will be given by the president and secretary, the cattle sale committee, cattle show committee, youth committee, and the business manager.

The nomination committee will report to the membership with their list of officer nominees for 1985, and four directors will be elected to serve a 3-year term.

Nominations for 1985-86 officers of the Pa. Guernsey Association are: President - Harry Wright, Canton; Vice-President - William Cannon, Hermitage; Secretary - Elsie Wolff, Quarryville.

In addition to a Johne's meeting, the Pa. Junior Guernsey Breeders' meeting, and a Middle Atlantic Guernsey Sires (MAGS) meeting, the annual event will also feature six Franklin County farm tours. On Saturday morning, March 2, convention guests can choose to visit four Chambersburg area farms: Brookside Guernseys - Ray and Roger Garber; Guerndale Guernseys - Fred Garber; Montview Guernsey Farm - Leigh Knepper and Sons; Rockmoore Farm - Vaugh, Eileen and John Moore; or Crown Stone Farm - Seth Schnebly and Family, Clear Spring, Md.; and Walnut Lane Farm - Rodney and Darlene Stuff of Mercersburg. The farm tours will give convention goers an opportunity to view the good work of the Franklin County Guernsey Breeders' Association members.

Also held in conjunction with the annual meeting will be The 7th Blue Halter Calf Sale, scheduled for Saturday at 1:30 p.m. at the Wilson College Stable, Chambersburg. The sale will feature heifers that are outstanding in both conformation and pedigree.

The sale provides an opportunity for 4-H and FFA members to buy Guernsey heifers that can compete with the best in the show ring. A 10 percent discount is given on heifers purchased for youth projects.

For additional information about the annual meeting or sale contact the Pa. Guernsey Breeders' Association, Lee G. Yost, Business Manager, 3107 Sollenberger Drive, Chambersburg, Pa. 17201; phone 717-263-3367.

Pa. Ayrshire Breeders to gather March 15, 16

GRANTVILLE — Important national convention plans will be discussed during the upcoming Annual Dinner Meeting of the Pa. Ayrshire Breeders Association. The Ayrshire Breeders annual meeting will become a two-day event this year, to be held at the Grantville Holiday Inn, on March 15 and 16.

Plans for the 1986 National Ayrshire Convention and Sale will be discussed on Friday evening, March 15. Holiday Inn personnel will be on hand to field questions and answers about procedures for the national convention. Every 1986 National Convention committee must be represented at the meeting and all Ayrshire members are encouraged to attend.

Two business sessions will dominate the activities on Saturday, March 16. At noon the annual luncheon — with baked ham steak on the menu for $7.50 — will be served.

All present and prospective Ayrshire breeders — young and old — are encouraged to attend the annual meeting and meet their fellow Ayrshire breeders. This will be an opportunity to plan the future of the breed in Pennsylvania.

Mail or phone annual luncheon reservations to: Pa. Ayrshire Association, 595 Snyder Hill Rd., Lititz, PA 17543; phone 717-626-5788. Luncheon reservations should be made by March 12.

Friday night hotel reservations can be made by contacting the Holiday Inn, Grantville, PA 17028; 717-469-0661, by February 25. Say you are with the Pa. Ayrshire Association to qualify for the following rates: single-$36, double-$45.

The Grantville Holiday Inn is located at Exit 28 off of Interstate 81, 12 miles north of Harrisburg.

Block announces new debt aid

WASHINGTON — Secretary of Agriculture John R. Block has announced additional initiatives designed to further help financially stressed farmers through their temporary difficulties.

"Last September we announced a plan that we felt would give many farmers a chance to put together a stable financial future," Block said. "We are pleased with how this has helped Farmers Home Administration borrowers. But the portion of our program designed to help other troubled borrowers is not being utilized by private banks and other commercial lenders to its fullest advantage."

Block said he believes these steps will enhance the effectiveness of the program announced last September. These measures follow:

• The Secretary of Agriculture will chair a Farm Credit Coordinating Group to coordinate activities of federal and financial regulatory agencies having responsibilities for farm credit issues. The group will coordinate resources within existing federal programs to assist financial institutions, communities and individual producers. The group will include the Chairman of the Federal Deposit Insurance Corporation, the Comptroller of the Currency, the Assistant Secretary of Treasury for Domestic Finance, the Governor of the Farm Credit Administration, the Under Secretary of Agriculture for Small Community and Rural Development. The Vice Chairman of the Federal Reserve Board will serve as an observer.

• New regulations will modify the procedures in the credit plan announced last September so as to include an interest write-down option along with a principal write down option. The maximum guarantee of the principal write down option is 90 percent.

• USDA will create an emergency "Credit Assistance" program. FmHA guarantees of up to 90 percent on operating loans will be made to eligible producers previously served by failing lending institutions. They will be applicable to new crop loans on a one-year basis. Eligiblity is limited to producers with substandard loans who can meet a cash flow test on new credit extensions. The assuming institutions may write loans under quick certification procedures to be established by emergency regulations.

• The Department of the Treasury will work with the FDIC, the Comptroller of the Currency and the Federal Reserve to implement a policy to avoid supervisory actions that may discourage banks from exercising forbearance or from working with farmers and small business borrowers who are experiencing temporary difficulties in meeting their dept service obligations. Such forebearance is in the public interest and should be encouraged when it is consistent with safety and soundness considerations. In particular, each agency will be ased to designate special review examiners to review the examination report of each farm sector bank before it is forwarded to the bank to ensure compliance with this policy.

• USDA will create special action teams of trained FmHA lending officers to be sent on short notice to set up temporary offices in areas where a commercial bank or Farm Credit System institution has been liquidated. The team will assist in the reestablishment of necessary operating credit for qualified operators. USDA will work with the FDIC to obtain early notification of bank liquidations and will be able to move teams into the area immediately after a liquidation occurs.

• USDA will review its standards for recruiting farm credit and farm management specialists to work with commercial and Farm Credit System lenders on the credit initiatives. USDA will also move more aggressively to place the specialists in targeted areas.

• USDA will help operate "credit hot lines" in various states to provide financial information and advice of troubled operators.

• USDA will encourage state governments and commercial and Farm Credit System lenders to provide staff assistance to help with the timely processing of FmHA loan applications. The Secretary of Agriculture will also direct agencies from within USDA to cooperate with FmHA in providing staff assistance.

Block said all credit relief measures will be implemented under current law and authorities.

Two Extension Programs Slated

LANCASTER - A Penn State legal specialist will conduct two programs on land transfer and estate topics. The programs, sponsored by the Lancaster County Extension Service will be held at the Farm and Home Center.

Atty. John Becker, agricultural law specialist, will discuss Estate Planning at 7:30 p.m. on Thursday, Feb. 28.

Becker will be back two weeks later on March 14 to talk about farm transfer agreements.

Cumberland producers 'talk sheep' at annual meeting

BY MONTIE TAK
Staff Correspondent

Fleece and feast.

These aspects of sheep husbandry came under discussion at the annual Sheep Producer's Meeting on Wednesday, February 6, at the Cumberland County Extension Office. A small but highly motivated group of farmers attended the meeting, headed by Laura Watts, county agent.

The featured speakers took nearly opposing views of the sheep industry. Thomas Knisely, speaking on wool and the hand-spinner stated, "I like the idea of getting into a fleece and knowing what the animal was all about."

Rich Nowell, a buyer for Appalachian Lamb Company, has a different view. "I really don't care what kind of lamb it was on the outside, once you put the carcass in the cooler."

Watts began the evening's discussion with a news release from the Pennsylvania Department of Agriculture. According to the release, dated February 5, the sheep and lamb inventory on Pennsylvania's 4900 sheep farms totals 88,000, a population drop of 15 percent from the previous year. This represents a record low.

She asked the gathering for their views. Bob Holtry, who raises Suffolk and Dorset Sheep, pointed out the cost increases and lack of a market in this area for purebred animals. Watts concluded, "We have no rampant diseases, it's just a matter of economics."

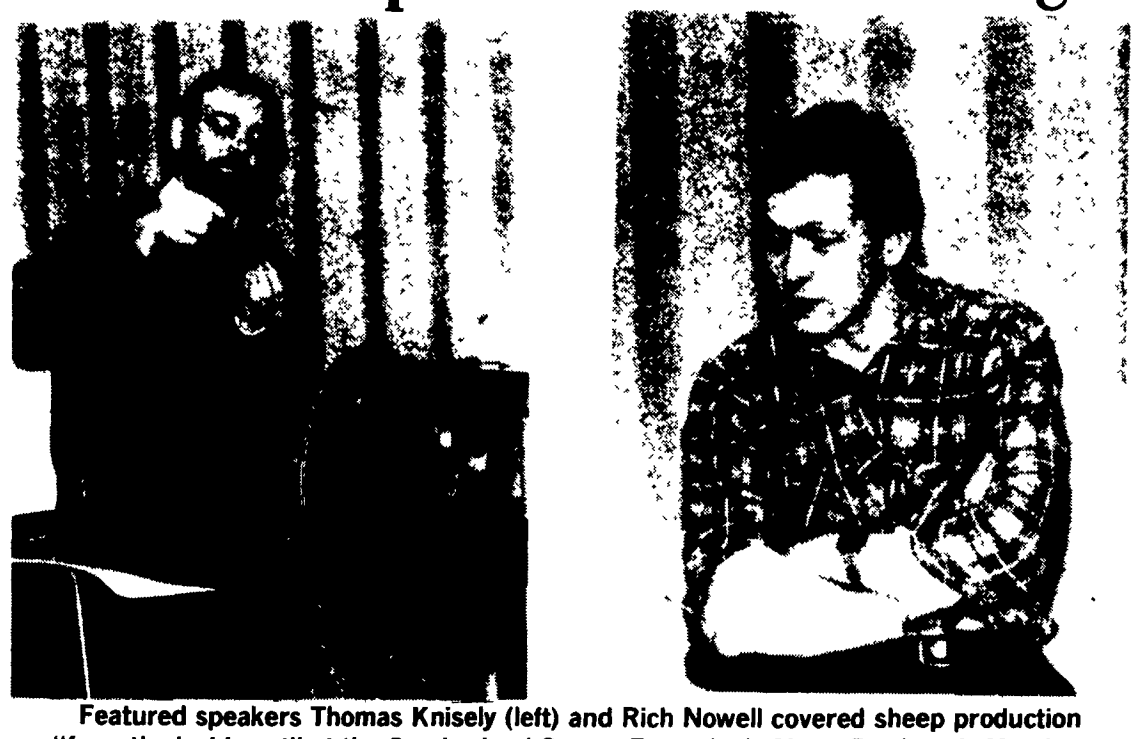
Knisely is an instructor at Manning's Studio in East Berlin, where he teaches spinning and weaving. He says Manning's is one of the largest suppliers of wools and cotton threads in the United States. The studio also carries a large selection – "like a small library" – of books on spinning and related subjects.

From rural York county, Knisely says he became interested in antiques as a youngster and purchased a spinning wheel at 13. "Actually I was interested in anything to do with rural living," he recalls. He didn't realize it at the time, but he says it is rare to find a spinning wheel in working condition, as his was.

When he first went to Manning's for supplies, he remembers the surprise expressed by the studio's personnel at his interest. Most of their clientele were considerably older. The young Knisely went home with a brochure and taught himself to spin. He maintained an ongoing relationship with Manning's and continued to spin and weave throughout his high school years.

In June 1977 he was invited to participate in a spinning seminar at the studio. "I went down to work that Saturday and never left," he remarks.

Things have changed since he read that first small brochure. Knisely says more people have become aware of the comfort and warmth of natural fibers and says this may be part of the back-to-the-land movement that began several years ago.



Featured speakers Thomas Knisely (left) and Rich Nowell covered sheep production "from the inside out" at the Cumberland County Extension's Sheep Producer's Meeting on Feb. 6.

He likes to process the fleece completely from raw material to finished product, "absolutely by hand. Then you know what you're working with." He says he can also tell a great deal about the health of the animal by an examination of the fleece.

Knisely points out few farmers are breeding and raising sheep for the handspinner's market, a market valuing a longer staple with more crimp than some breeds have. "Farmers probably don't realize the market is there yet," he says. But he also admits there may be an inherent limitation to the market as some handspinners raise their own sheep.

"Today there's a lot of pride in raising your own sheep and producing a sweater or shawl," he says. "The eighteenth or nineteenth century farmer probably didn't think anything of it.

"But there's nothing more gratifying than doing it yourself from start to finish. There's a lot of satisfaction and that can't be bought in any large department store."

Appalachian Lamb Company, says Nowell, is probably the largest lamb killer on the east coast. He says the Greencastle plant processes 1200 to 1300 lambs a week in addition to about 200 head custom-kill lambs. The plant has as many as 17 men on the kill floor at one time and they can process 78 lambs an hour. Carcasses average 55 pounds.

"Most of these come from Virginia and Ohio," states Nowell. "We get very few lambs from you people." He says lambs are purchased on dress weight "right on the floor" and price this week ran around $1.30 pound.

He points out the effect western markets have on those in the east and the resulting recent price jump from the $1.20 range. Average carcass weight is also on the rise. He notes a trend from the 40's now to the 50's and he anticipates a rise in dress weight into the 60's because farmers are putting meat on their animals and not fat.

Nowell stresses the importance of lambs having access to water up until the time of slaughter but that grain fed to them at that time is usually wasted. He says he gets a lot of Suffolk crosses through the plant. "We like a Suffolk lamb because you can put a 60-pound carcass in the cooler and not have a lot of fat on it."

He feels selling at dress market weight is the fairest method. "The price this year is higher than it's been the last couple years. That should help all of you here," he concludes.

Sulbra crop association grows

TOWANDA – The Sulbra Crop Management Association of Sullivan and Bradford County is continuing to expand with new memberships despite difficult financial times for farmers.

Members have prasied technicains, Gary Polly of Troy and Dale Dewing of Warren Center who, they said, helped them save up to $10,000 on fertilizer up to $1,000 on pesticides in the first year.

One member, Gary Green of LeRaysville says the associations corn fertility program in 1984 alone saved enough money to pay his membership fees for five years. Mr. Green related that recommended Alfalfa Program, and said he had benefitted from other ideas, including minimum - till and no till, manure management, and crop selections.

The Crop Management Association assists in: establishing a crop production recordkeeping system on each member farm; maintaining crop production records; planning crop production needs (seeds, fertilizer, lime, and pesticides); securing soil samples on a periodic basis; securing tissue samples where special problems exist; interpreting recommendations based on soil and tissue test results; identifying and monitoring insect and disease problems such as alfalfa weevil, leafhopper, corn rootworm, cutworms, army worms, stalk borer, European corn borer, slugs, leaf blights, bacterial wilt and anthracnose; identifying and monitoring weed problems in corn, forage, small grain and soybean crops; checking crop yields; field measuring to determine acreage; and sponsoring educational meetings.

Wayne Dairy Day

HONESDALE – The 1985 Wayne County Dairy Day planning committee has appointed subcommittees and made final arrangements for Dairy Day which is set for March 14, 9:30 a.m. to 3:30 p.m., in the Wayne County Veteran's Memorial Armory.

Educational speakers will be Dr. Karen Mancl, Extension agricultural engineer, Penn State University, who will speak on safe water for the farm and home; Dr. Sidney Barnard, Extension dairy food scientist, who will give demonstrations and speak on milk quality tests; and Marlyn Shaffer, Lake Ariel, a member of the Pennsylvania Milk Promotion Committee, who will report on milk promotion activities. Karen Dix, the 1984 Wayne County Dairy Princess is also expected to speak.

Commercial exhibitors and organizations interested in participating in Dairy Day can secure information by contacting the Wayne County Extension Service at 717-253-5970.

Dairy Day consists of educational speakers, commercial exhibits, demonstrations, door awards, and lunch provided by the exhibitors.

Manure Management

(Continued from Page A1)

"A big part of the program will be an extensive survey of the farmers, finding out what practices they use now and what they can do to be more efficient," describes Woodward. "We must do something about the excess manure in the area."

And last night McKeehen confirmed the new staff member's duties. McKeehen said Woodward will work closely with the SCS and ASCS personnel, the state Department of Environmental Resources, and EPA. All the agencies are cooperating in the the Chesapeake Bay Study Project.

Woodward is just one addition to a group of Penn State researchers who are devoting their energies to solving the manure management problems, said McKeehen. Agronomists, water quality specialists, ag engineers, farm management personnel and others are focusing on the problem.

In other business at the meeting, 4-H agent Zoann Parker and agricultural agent Arnold Lueck reviewed last year's Lancaster County Extension activities.

New Extension Association directors were elected in five districts. They were: James Kettering, Manheim; Robert E. Martin, New Holland; J. Clayton Charles, Lancaster; William Dean, Strasburg; and Ann Rohrer, Quarryville.

Farm Policy

(Continued from Page A1)

pluses of any commodity to pile up."

The Farm Bureau, he said, has worked with the administration to remove kinks in the farm credit delivery system, obtaining administration approval of a request to speed up Farmers Home Administration Loans.

The group also asked that continuation procedures for each loan be handled on an individual, personal basis, with consideration for economic conditions that are beyond the farmer's control.

Delano, who farms about 400 acres in Virginia, has earned a reputation for political clout, and was named one of the most influential people in American agriculture by U.S. News and World Report.

Calling for the gathered PFA county presidents to commit themselves to the cause of American agriculture, Delano added, "What happens off the farm often has as much affect on your success as what happens between your fence rows.

Pa. Holstein Convention slated for next week

PHILADELPHIA - The annual convention of the Pennsylvania Holstein Association will get underway Thursday and Friday at the Adam's Mark Hotel.

Coinciding with the Pennsylvania Junior Holstein Convention, the state meet will begin with the convention sale, slated to start at 11 a.m. Thursday.

Other events on the agenda include a "Philadelphia Package" buffet, featuring delicacies like cheesesteaks and hoagies from the city of brotherly love; a Friday morning awards banquet with a speech by former Philadelphia Eagles football coach Dick Vermeil; and the annual meeting and reception to follow on Friday evening.

Pa. creates $10 million fund for farm debt assistance

HARRISBURG — Application forms for the state's $10 million Family Farm Assistance Program will be available to farm families beginning February 15, according to the State Department of Agriculture. The program created through the $190 million Economic Revitalization Fund, provides loan guarantees and interest deferrals for Pennsylvania family farmers.

The Department has mailed instruction manuals for the program to lending institutions across the state for their review prior to making applications available. Although the program does not provide direct loans for farmers, it encourages farm lending through private institutions.

"The Family Farm Assistance Program is designed to help beginning farmers, farmers who wish to expand their operations, and farmers who plan to convert their production to more marketable commodities. Loans guarantees will be made at 90 percent of the loan value. Interest deferrals may be made for up to the first three years of a loan where there are temporary cash flow difficulties for the farm family," according to Deputy State Agriculture Secretary E. Chester Heim.

Loans may be used for the production of agricultural commodities, for processing and direct marketing of commodities raised on the farm. Loan terms cannot exceed 20 years of acquisition of farmland, construction or rehabilitation of farm structures; and seven years of acquisition, repair and replacement of capital assets such as livestock or equipment. Guaranteed loan funds may also be used as working capital to purchase fertilizer, livestock feed, seed and other supplies for use on farmland with a one year term.

Heim said loan guarantees would be limited to loans used to:

* acquire farmland

*convert a farm's production of a commodity with a more adequate market

*processing or directly marketing agricultural commodities produced on the farm seeking assistance.

*acquiring productive assets to recover from a natural disaster when federal or other assistance is unavailable on a timely basis.

*acquiring productive assets needed to recover from a bankruptcy or unforeseen financial setback which is not the farm family's fault, such as bankruptcy by a farm family's contractor.

He noted that interest deferrals would be available only where the temporary cash flow difficulty for the family was attributable to the above causes or to development of agricultural commodities which do not yield a cash crop over early years of production, such as orchards, vineyards, or breeding livestock.

The program works through private lenders which are willing to make and service the loans. These lenders may include banks, savings banks, mutual savings banks, building and loan associations, savings and loan associations, trust companies, insurance companies and financial institutions operating under the supervision of the Federal Farm Credit Administration.

Heim said that area loan organizations in 56 of the state's 67 counties have expressed their intention of helping administer the program through initial reviews and recommendations on loan applications from lenders.

Application forms will be available through participating lenders, the Department's seven regional offices, and the Bureau of Agricultural Development in Harrisburg. More information on the program is available by writing the Bureau of Agricultural Development, Pennsylvania Department of Agriculture, 2301 North Cameron Street, Harrisburg, PA 17110-9408 or by calling (717) 783-8460.

Guidelines for the program were approved January 16 by a nine-member Agricultural Development Advisory Committee composed of state Agriculture Secretary Penrose Hallowell; Senator Edward Helfrick (R), Northumberland County, and Representative Samuel Morris (D), Chester County, chairmen respectively of the State Senate and House Committees on Agriculture and Rural Affairs; Darvin Boyd of Akron, Lancaster County, representing lending institutions; Robert Reich of Winfield, Union County, representing farm credit associations; Dr. Virgil E. Crowley of The Pennsylvania State University, an agricultural economist; and three farmers, Barbara Robison of Coal Center, Washington County, Furman H. Gyger of Kimberton, Chester County, and Charles Wismer of Trappe, Montgomery County.

PUBLIC SALE
COMPLETE DISPERSAL HOLSTEIN DAIRY CATTLE, FARM MACHINERY, FEED AND DAIRY EQUIPMENT

The undersigned, discontinuing farming, will sell the following at public auction on their farm located at the intersection of U.S. Rt. 1 and Md. Rt. 276, 3 mi. south of Pa. State Line, on U.S. Rt. 1, Cecil Co., Rising Sun, Md. on:

MON., FEBRUARY 25, 1985
10 A.M. Sharp
Signs will be posted.

ORDER OF SALE:

STRIKE IT RICH!

SELL IT WITH A LANCASTER FARMING CLASSIFIED

A.O. Smith
SLURRYSTORE® SYSTEMS

Midwinter manure handling can be quite a chore, in any livestock operation. But manure is valuable and should be considered an asset. And, it should be treated like one. With a Slurrystore® system, you can keep your assets liquid for easy management, year round.

A Slurrystore system is the efficient way to manure management. Months of storage capacity eliminate frequent hauling. You spread when you want to. Odor and runoff are reduced. It just makes a frustrating job a whole lot easier.

Call us today and find out why
The system is the solution.

No frozen assets.

Fasnachts are a Pa. Dutch tradition

BY SALLY BAIR
Staff Correspondent

DENVER – Tuesday will be Fasnacht Day, that time when hundreds of people of Pennsylvania Dutch descent will prepare for the beginning of the Lenten Season by making fasnachts. Thousands more will simply enjoy the delicious treat!

The tradition of making and eating fasnachts comes because of the desire of homemakers to use up all the fat in the kitchen before the Lenten period of fasting begins. Since fasnachts are deep fried, they qualify as a way to use up a lot of cooking fat.

While many people enjoy making this once-a-year treat, most now prefer to purchase them, and Triple G Farms Country Store on the Denver-Reasmstown Road is one of the many stores which tries to fill the need.

Sandy Leed, bakery manager, says that the bakery at Triple G's market has been making them for about three weeks because people enjoy getting their fill early. But this is the weekend the real push comes when they try to keep up with the demand for fasnachts on Tuesday.

Sandy explains that the fasnachts made at Triple G are made with potato flour in the Pennsylvania Dutch tradition. The difference between fasnachts and donuts, of course, is that fasnachts do not have holes. The ones offered at Triple G are oval, although some traditionalists believe they should be square. Sandy says, "They are a plain, raised doughnut, without powdered sugar."

Edith Showalter, who has worked in the bakery almost since it started, says that the traditional way to eat fasnachts is with butter and molasses. She says that either light or dark syrup is acceptable, observing that preferences depend mostly upon how the tradition was observed in the home in which you were raised.

That's tradition, but some people want to have powdered sugar on their fasnachts, and some, not from the area, even accept doughnuts as the real thing.

There are some secrets to good fasnacht-making from which the home baker can benefit. Sandy says it is most important to "proof" or rise the dough in the proper temperature and humidity. It is also important to have the oil at the proper temperature, about 375°F., before dropping the dough into the hot fat. If the dough and the fat are both at the proper temperature, they brown just right, without absorbing all that fat.

At Triple G the fasnachts are drained on a rack, rather than brown paper or other absorbent paper. Sandy says. "The rack is better than paper." After draining, they are ready to be put on trays for selling and eating.

Sandy said that the goal at the market is to have 2,000 dozen doughnuts ordered for Fasnacht Day. This will mean working round the clock, beginning Sunday night, to fill the demand. "The regular staff chips in," Sandy says by way of explaining how it is possible. Last year they filled 1,000 dozen orders for the special day.

The seasonal treat is not expensive, Sandy states, adding that they cost slightly less than doughnuts.

Triple G will even offer fastnachts for several weeks after the start of Lent, to meet the demand. Sandy says many people purchase them by the dozen for their office or business. "It's just the tradition," she says.

Triple G's bakery has been in business for about eight years, and Sandy says, "We have one of the widest varieties in the area." In addition to the traditional items, their line has expanded to carry such things as bagels and croissants. She says they are constantly offering new products.

"We do a real good cake business," Sandy says, adding that they have decorated cakes available in the case or on order. She says rolls are more popular than bread, and says they have become well known for their hoagie rolls which groups often use when they have fund raising hoagie sales.

Not surprisingly, Christmas is the biggest holiday for the bakery. Sandy says, "We make hundreds of pounds of dough into sandtarts. People would rather pay for ours than make their own."

Easter is the next most popular holiday. Each holiday brings specials from the bakery, and February offers not only Fastnacht Day, but also George Washington's birthday and Valentine's Day, keeping the bakery staff on their toes making appropriate bakery items.

The biggest selling traditional items for the bakery are whoopie pies, shoo fly pies and red velvet cake. "We make a real moist, dark red cake," Sandy volunteers. The market gets many out-of-staters from nearby campgrounds, and they are always eager to buy Pennsylvania Dutch foods. "People do keep coming back," Sandy observes.

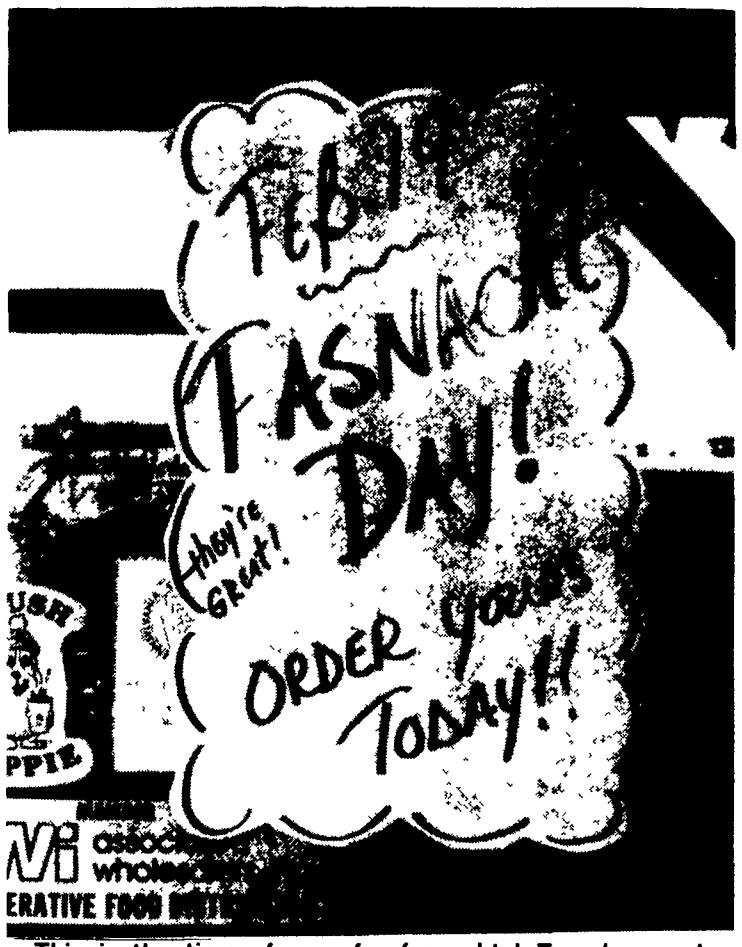
Weather plays an important part in the amount of goods the bakery sells. Sandy says, "If there is a snow warning, there is a mad rush for bread, milk and eggs. If they are predicting snow, we try to get in early."

In general, Sandy says, "It's really hard to know what to make. It's a constant battle to predict. We keep records and make notes."

Although summer is a slow season for selling baked goods, Sandy says they keep busy making rolls and other items for the catering business run by the store. Chicken barbecues and pig roasts

(Turn to Page B4)

Curt Redcay drops the fasnachts into the hot fat. Having both the dough and the fat at the correct temperature is the secret to non-greasy, delicious fasnachts.



This is the time of year for fasnachts! Tuesday marks Fasnacht Day, signifying the beginning of the Lenten fasting season.

Promoting dairy products is important at Triple G Farm Market since they started as a jugging operation and continue to process their own milk and ice cream. This mouse, in real life Anna Eckert, is offering samples of the wide variety of cheeses available in the store.

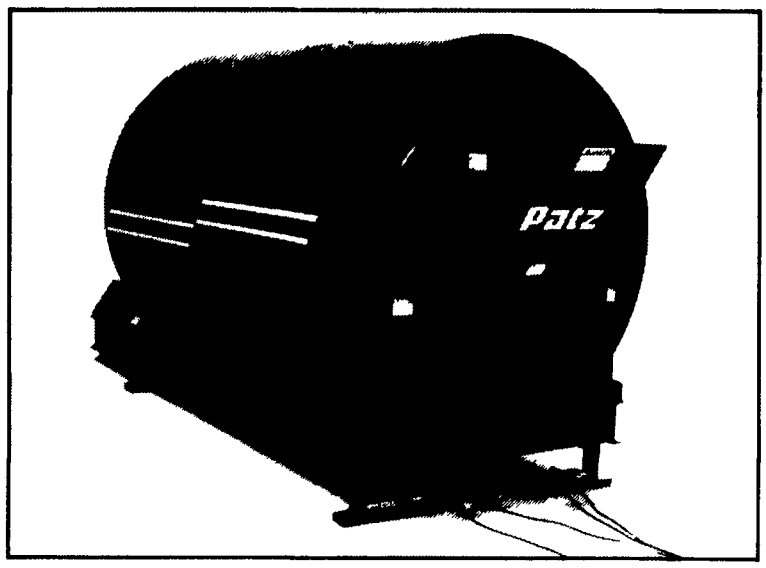
These fasnachts won't last long! Sandy Leed, bakery manager at Triple G puts a full tray of freshly-baked fasnachts into the display case.

Homestead Notes

Patz

RUGGED AND RELIABLE. . . THAT'S THE WAY PATZ BUILDS EQUIPMENT

All NEW



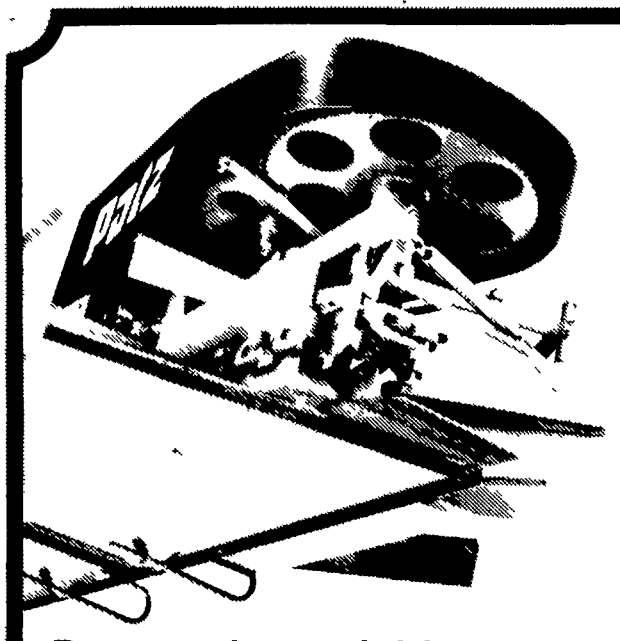
Patz Blender/Mixers Feature Tumble Mixing

Patz Blender/Mixers feature a rotating drum with internal conveying flights and a single recirculating auger This provides continuous feed flow as feed enters, moves to the back and is recirculated to the front by a central auger for fast, thorough mixing

Often mixing is done by the time the last ingredient is added

With optional scales, you can formulate and blend rations to meet the exact needs of your cattle The electronic weigh-bar scales system provides easy readout The scales are programmable to sound a buzzer and flash a light when the desired weight of the feed is reached

Two sizes 180 cubic feet mixing capacity (145 bu) and 100 cubic feet mixing capacity (80 bu)



Proven dependable gutter cleaning

Patz gives you quality and dependability in every gutter cleaner Patz offers the proven forged-steel, hook and-eye link

Your Patz gutter cleaner becomes a wise investment for you over the years because it's built to last The all steel slide and one-piece steel flites with wear shoes are engineered to withstand the ruggest wear of everyday operation

Parts are still available for machines installed several years ago

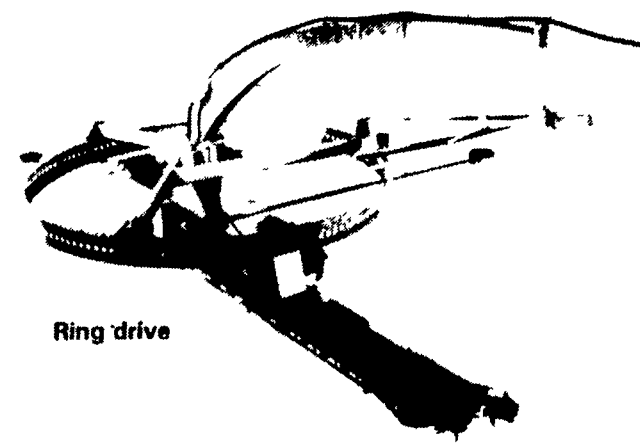
And Patz gutter cleaners are adaptable to many layouts

Talk to your Patz dealer He'll show you how Patz performance means fewer problems for you And that gives you more time to manage your livestock operation for greater profit

Reliable Feeding

Hard-packed and frozen silage makes feeding more than a routine chore

Patz gives you two solutions to the problem — the RD-820 ring-drive silo unloader and the 98B surface-drive silo unloader Both have a double hook gathering chain with hardened steel cutters and claws that cut through frozen and packed silage



Ring drive

Surface drive

- Spring tensioned powered cutter keeps silo walls free of buildup
- Preset depth of cut control makes feeding truly automatic (98B)
- Powerful blowers with adjustable impeller blades do the job

We'll show you how to get the most performance for your money

Attractive farm signs help customers locate the items they want to purchase in the supermarket.

Fasnachts

(Continued from Page B2)

are two of the types of picnics offered.

Sandy said most customers appreciate cleanliness and the service offered by Triple G.

Triple G began as a family jugging operation in 1966. Donald Graybill, one of the three brothers who makes up the "triple" says they decided to go into jugging because, "We felt we weren't getting a fair price for milk. There were quite a few juggers in Pennsylvania – it was a profitable thing then, but our costs keep going up."

Arthur and Irvin are the two brothers who make up the partnership with Donald and who still operate the farms and market. The brothers milk about 190 cows and the milk processing is still done on the premises, and customers enjoy paying jugger prices at the supermarket.

Brian Nissly, supermarket manager, says they process 5,500 gallons of milk weekly. They bottle their milk in durable, clear plastic returnable bottles. Nissly says people prefer the clear plastic to cartons. They also offer non-returnable plastic as an option to their customers.

They make their own ice cream, and an ice cream parlor adjoining the store does a big business in both cones and packaged ice cream. The parlor also offers a luncheon menu. Triple G makes about 30 flavors of ice cream, processing two days a week.

With their small jugging operation, the Graybill brothers offered a small line of convenience groceries. Donald says they expanded to the supermarket "so we could offer more of our farm products." The present farm market was built in 1977 and was expanded about two years ago.

He said they feel they are providing a service for the Denver-Reamstown area offering one of the widest varieties of products.

Promoting milk goes along with their grocery line. They run promotions during June Dairy Month, but this month had a cheese promotion going in the lobby of the supermarket where they often offer specials. A cow is a standard fixture in the lobby, offering kids the chance to climb on it, hug and kiss it. When they move the cow to another area, Nissly says children wonder where it is.

Brian states, "We try to serve our customers to the best of our ability."

For most of us, Fashtnacht Day means the opportunity for a sweet treat. For Triple G Farms, it means a lot of planning, lots of extra work and the good feeling which comes from offering the public a taste of what it wants. In this case, a delicious taste of pre-Lenten indulgence

On being a farm wife - And other hazards

Joyce Bupp

"I'm having cold pizza tomorrow morning for breakfast," I overheard a familiar voice say in the living room.

"Well, I was going to have the pizza for breakfast," countered a second voice.

Cold pizza for breakfast?

Bacon and eggs, yes. Waffles or pancakes, yes. English muffins or oatmeal with raisins, yes. But cold pizza? No, thank you.

Still, this could be part of a trend that has begun sweeping the haute cuisine, snob-appeal food fad-dishness of recent times, in which modish diners found fulfillment in such things as pine nut salad, steamed seaweed souffle and tofu tarts.

Instead of novelle cuisine, the nation's army of "eat-outers" seems to be switching to what I consider Real Food.

What we're talking here, fellow cooks, are things like meat loaf, pot roast, tuna noddle casserole and honest-to-goodness, authentic, down-to-earth mashed potatoes. That's real, genuine mashed potatoes, as in peeled. With lumps even, for authenticity.

Psychologists have studied the phenomenon in an effort to analyze this retreat back to Grandma cooking - or maybe country cooking would be more appropriate.

And what they're saying is that this swing back to such foods is possibly a search by an upwardly mobile society for "comfort" or "security," the kind of warm cuddled feeling we all experience when we sit down to a table with a loaf of warm homemade bread, a stick of real butter and a jar of home-canned wild-berry preserved.

How could you beat that for a homey feeling of security?

Other trend-analyzers see the move as having something to do with the renewal of patriotism, the land-slide toward Reagonomics and a sort of stampede toward fundamental conservatism after the swinging Sixties and the searching Seventies.

Maybe just a groping for roots (via the stomach) is the best way to sum it all up.

After all, don't we all remember being comforted by mother with hot soup when we were sick, and welcomed in from a cold day of sledding with hot chocolate and warm cookies?

Certain foods have always been inherently tied to happy family celebrations: the traditional juicy, brown turkey and moist stuffing of Thanksgiving and Christmas, country ham at Easter and a fourth of July picnic complete with hotdogs, burgers, potato salad and deviled eggs. A picinic menu of grilled zucchini al dente with mint sauce, for example, would hardly make it.

Most of us native "Pennsylvania Dutch" cooks have never really gotten too far away from our regional food basics, menus frequented by such delicacies as chicken corn or ham bean soup, fresh garden salads, pork chops and sauerkraut, roast beef - with lumpy mashed potatoes - string beans and ham, biscuits and gravy, fried chicken, and noodles or pot pie.

And pizza, for us German descendants with a hint of Italian in our souls.

Neither claimer of the leftover pizza ever did have it cold for breakfast. But the cat loved it.

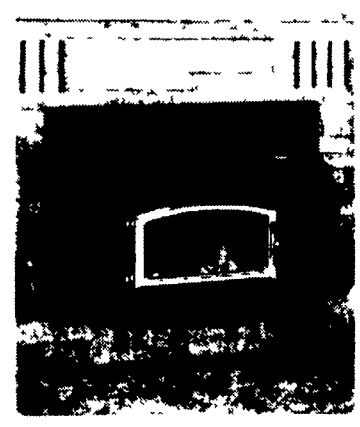
Elmira Stove Works

FIREPLACE INSERTS with ½" CAST GRATES

Heats Up To 2200 Square Feet

Optional: CATALYTIC COMBUSTOR



- **50% MORE HEAT*** As the Corning Catalytic Combustor burns smoke and creosote, it creates additional heat Independent studies show that up to 50% more heat is generated from each piece of wood
- **90% LESS CREOSOTE*** Condensation of smoke and gases in flue and chimney creates creosote - the primary cause of chimney fires The combustor reduces this danger because it burns most of the smoke and reduces creosote accumulation as much as 90% which also means fewer chimney cleanings

* Performance results may be higher or lower depending upon stove operation and combustor age

Treat your sweet tooth to candy

If your sweetheart neglected to give you a lacy, heart-shaped box of candy for Valentine's Day, or if you've already consumed the one he did give you, don't despair. You can satisfy your sweet tooth by making your own candy.

You could mix up a batch of creamy, rich fudge — the kind that satisfies even the biggest sweet tooth with just two bites. Or, you could try some date chews, sea foam, or any of the other delicious confections our readers have shared this week.

And, if you are feeling particularly generous, you might even want to share some of your sweet treats with your family.

DATE CHEWS

Grind together 1 cup dates, 1 cup black walnuts, ½ cup coconut. Mix together 2 teaspoons light cream, 3 teaspoons vanilla, 2 cups brown sugar, ½ cup 10x sugar. Mix with fruit and roll into balls. Roll in brown sugar, then in 10x sugar.

Mrs. Kitty Wagner
Elizabethtown

SEA FOAM

1 pound dark brown sugar
¾ cup water

Boil until 240°F. Beat white of 1 egg until stiff. Pour slowly into boiled syrup, beating until it stands in peaks. Drop by teaspoons on waxed paper.

Mrs. Kitty Wagner
Elizabethtown

CANDY OPERA FUDGE

8 ounces Philadelphia cream cheese
½ pound butter or margarine
1 teaspoon vanilla
2 boxes 10x sugar

When soft, mix cheese and butter; add remaining ingredients and chill. Form ball and coat with chocolate. Add coconut if desired.

Suetta High
Reinholds

ROCKY ROAD FUDGE

¼ cup milk
2 packages (5¾ ounces each) chocolate chips
2 cups miniature marshmallows
½ cup chopped nuts
Dash of salt

Grease baking pan with butter. Heat ¼ cup milk and chocolate chips in saucepan over low heat until chocolate chips melt, stirring constantly. Remove from heat.

Stir in 2 cups marshmallows, nuts and salt. The marshmallows will make little lumps in the candy.) Spread candy in buttered pan. Refrigerate 1 hour or until firm. Cut into 1-inch squares.

Michelle Hurst
Denver

PEANUT BRITTLE

2 cups sugar
1 cup light Karo
½ cup water
1 cup oleo
4 cups raw peanuts
1 teaspoon baking soda

Blend sugar, Karo, water and oleo. Cook to 230°F. Add nuts, cook to 280°F., stir occasionally and cook to 305°F. Remove from heat. Add baking soda and stir quickly until mixture foams. Quickly pour into two buttered 15x10-inch pans.

Cool until hard and break into pieces.

Charlotte Hill
Blairsville

WHITE NUT FUDGE

1 can canned milk
4 cups sugar
½ pound butter
¾ cup white corn syrup
1 tablespoon vinegar
Pinch of salt
1 heaping tablespoon of cornstarch
2 cups nuts, finely chopped

Mix all ingredients except nuts. Cook over very low heat, stirring often until it forms a soft ball Remove from heat and add nuts.

Beat by hand vigorously until ready to pour. Pour into greased platter or shallow pan and cut into 1-inch squares when cool. Makes about 5 pounds. Candy cooks better in a heavy pan.

Mrs. Louise Neff
Centre Hall

SAUSAGE CANDY

2 pounds white sugar
1 pint white corn syrup
1 pint cream
1 pound English walnuts
1 pound cream nuts
1 teaspoon vanilla
1 small jar maraschino cherries

Boil sugar, Karo and cream until it forms a hard ball. Have the nut meats ground and cherries chopped. Add to the boiled mixture. Pour into pans and let cool enough to handle, then work with hands until creamy. Form into long thin rolls and cut.

Susan Martin

FUDGE WEDGES

1 4-ounce can flaked coconut
1 6-ounce package semi-sweet chocolate pieces
3 tablespoons light corn syrup
2½ cups sifted confectioners' sugar
1 cup chopped walnuts
⅓ cup orange juice
About 1⅔ cups finely rolled graham cracker crumbs

Sprinkle ⅔ of the flaked coconut over bottom of a 9-inch pie plate.

Melt chocolate over hot water. Add remaining ingredients, except flaked coconut and mix well.

Turn into coconut-lined pie plate. Sprinkle remaining coconut over top and press down gently. Chill. Cut into thin wedges. Makes 14 to 16 wedges.

Satisfy your sweet tooth with a batch of Old-Fashioned Fudge.

CHOCOLATE NUT BALLS

1 6-ounce package (1 cup) semi-sweet chocolate pieces
2 tablespoons butter or margarine
1 egg
1 cup sifted powdered sugar
½ teaspoon vanilla
Dash of salt
½ cup flaked coconut
½ cup chopped peanuts
Flaked coconut

In a medium saucepan, melt semi-sweet chocolate pieces and butter or margarine over low heat, stirring frequently. Remove pan from heat; cool to lukewarm. Beat in egg until smooth and glossy. Add sifted powdered sugar, vanilla and salt; mix well. Stir in the ½ cup flaked coconut and the chopped peanuts. Chill about 1 hour. Form into 1-inch balls; roll in additional flaked coconut. Arrange on a baking sheet. Chill at least 3 hours or until firm. Makes about 2½ dozen balls.

Brenda M. Kramer
Newmanstown

TOFFEE

1 cup pecans, chopped
¾ cup brown sugar (packed)
½ cup butter or margarine
½ cup semi-sweet chocolate pieces

Butter baking pan, 9x9x2 inches. Spread pecans in pan. Heat sugar and butter to boiling, stirring constantly. Boil over medium heat, stirring constantly, 7 minutes. Immediately spread mixture evenly over nuts in pan.

Sprinkle chocolate pieces over hot mixture, place baking sheet over pan so contained heat will melt chocolate. Spread melted chocolate over candy While hot, cut into 1½-inch squares Chill until firm Makes 3 dozen candies

CANDIED ORANGE PEEL

Score peel of 2 large oranges into quarters; remove peel. Heat peel and 6 cups water to boiling. Simmer 30 minutes; drain. Repeat, cooking peel in another 6 cups water. Gently scrape off remaining white membrane from peel. Cut peel lengthwise into ¼-inch strips.

Heat 2 cups sugar and 1 cup water to boiling, stirring until sugar is dissolved. Add peel; simmer 45 minutes, stirring frequently. Drain mixture thoroughly. Roll peel in 1½ cups sugar; dry on waxed paper.

FIVE MINUTE FUDGE

⅔ cup canned milk
1⅔ cups sugar

Combine in pan, bring to a boil. Cook for five minutes, stir constantly. Remove from heat and add 1½ cups marshmallows (16 large ones).

Add ½ cup nuts if desired. Add 1½ cups chocolate chips and 1 teaspoon vanilla. Pour into 8-inch buttered pan. Cool, then cut.

Featured Recipe

This week's featured recipe comes from Barbara Elliott, an avid spinner, weaver and recipe collector. Barbara has shelves loaded with cookbook after cookbook that must include any and every recipe she could possibly need, yet she continues to add to her collection.

Barbara shares a cherry recipe during this month of president's birthdays. She made it recently to treat a group of young tiger scouts who came to her home for a spinning and weaving demonstration. To learn more about Barbara and her many interests, see the story featuring her in this week's B section.

Surprise Cherry Squares

1 cup butter or margarine, softened
1½ cups sugar
4 eggs, beaten
2 cups all-purpose flour
1 teaspoon vanilla extract
1 teaspoon lemon extract
1 21-ounce jar cherry pie filling

Cream butter; gradually add sugar, beating until light and fluffy Add eggs, one at a time, beating well Stir in flavorings. Pour the batter into a lightly greased 15x10x1-inch jellyroll pan, spreading evenly

Lightly cut through batter with a small knife to mark off 24 squares Spoon about 1 tablespoon pie filling in center of each square. Bake at 350°F. for 45 minutes or until browned (Batter will puff up around filling while baking)

Cool cake in pan 10 minutes Cut into squares and remove from pan Yield 2 dozen squares

QUESTION - Emma Sue Martin, New Holland, would like a recipe for a coffee cake that has a pie filling center and is made with yeast. She would also like a recipe for custard filling for doughnuts.

QUESTION - Louise Baer, Newville, would like a recipe for Swedish meatballs with a sauce or gravy.

QUESTION - Mrs. Roland Rader, Holmes, would like a recipe for rich pan pudding.

QUESTION - Mrs Rose Martin, Ephrata, would like a recipe for peach tapioca using canned peaches She would also like a recipe for whole wheat pancakes like you get at a pancake house

CORRECTION - In last week's Cook's Question Corner we printed an Instant Hot Chocolate recipe from Mary Glick of Howard Mary wrote this week to say she omitted an ingredient in her recipe Below is the corrected recipe

Instant Hot Chocolate

1 20-quart box powdered milk
1½ box Nestle's Quick
1½ pounds 10x sugar
1 large jar creamoro
1 tablespoon instant coffee

Serve ⅓ cup mix in a mug of hot water

Candy

(Continued from Page B6)

OLD FASHIONED FUDGE

2 cups sugar
⅔ cup milk
2 ounces unsweetened chocolate or
⅓ cup cocoa
2 tablespoons corn syrup
¼ teaspoon salt
2 tablespoons butter or margarine
1 teaspoon vanilla
½ cup coarsely chopped nuts

Butter loaf pan, 9x5x3 inches. In 2-quart saucepan, mix sugar, milk, chocolate, corn syrup and salt. Cook over medium heat, stirring constantly, until chocolate is melted and sugar is dissolved.

Cook, stirring occasionally, to 234°F. on candy thermometer (or until small amount of mixture dropped into very cold water forms a soft ball which flattens when removed from water.)

Remove from heat; add butter. Cool mixture to 120°F. without stirring. (Bottom of pan will be lukewarm.) Add vanilla; beat vigorously 5 to 10 minutes with wooden spoon, until candy is thick and no longer glossy. (Mixture will hold its shape when dropped from a spoon.)

Quickly stir in nuts. Spread evenly in pan. Cool until firm. Cut into 1-inch squares. Makes 32 squares.

For Pecan Roll: Do not butter pan; substitute 1 cup brown sugar (packed) for 1 cup of the granulated sugar and omit chocolate. Shape candy into 12-inch roll; roll in ½ cup finely chopped pecans. Wrap; chill until firm. Cut into ¼-inch slices. Makes 48 slices

Cooking for two is not difficult

MEDIA — If you cook for only one or two, you have plenty of company. Statistics show that more than half the households in the United States now consist of one or two persons. But even though singles and twosomes now outnumber families with two parents and one or more children, most cookbooks and supermarkets still seem to be geared to the needs of larger households.

For many singles, the solution is to grab a burger at a local fast food restaurant, pop a TV dinner into the oven, or cook one big meal and eat leftovers the rest of the week.

QUEEN ANNE FUDGE

Put in large bowl:
1 stick oleo
1½ cups peanut butter
¼ cup milk

Cook in microwave for 4 minutes on medium high. Remove from heat and stir in the following:
1 pound powdered sugar
2 teaspoons vanilla
1 cup chopped nuts

Put in a buttered 9x9x2-inch dish.

Cookie Rhodes
Elysburg

NO-FUSS FUDGE

4 ½ cups (1 pound) confectioner's sugar
¼ cup cocoa (unsweetened)
1 cup margarine, melted (½ pound)
¼ cup peanut butter
1 teaspoon vanilla extract

Stir together confectioner's sugar and cocoa. Add remaining ingredients; mix well. Spread into a buttered 8 or 9-inch square pan. Refrigerate until set. Cut into small squares and enjoy.

Shirley Keeny
New Freedom

While these approaches are fine occasionally, a steady diet of such foods can be both expensive and boring to the palate.

Cooking for one or two is not difficult, and may offer some advantages not open to larger families. With only yourself and perhaps one other person to please, you have more freedom to experiment with new foods, flavors, and recipes. Eating schedules can be more flexible when you do not have to consider several other people in the household. In the supermarket, small cans and packages generally cost more per unit. However, a family-sized package is no bargain if it goes stale before it's used up. singles and twosomes can use some family-sized food items to their advantage.

For instance, buy regular sizes of bread, rolls, and pastries and keep them in the freezer. Remove portions as needed. Buy frozen vegetables in plastic bags whenever possible. That way it's easier to remove the amount needed for a meal. Buy several cookbooks for one or two, and clip receipes that can be decreased successfully. Don't be afraid to speak up when packages of meat, cheese, and produce are in large sizes. Ask the grocer to repackage what you need into smaller portions. Most are happy to please their customers.

Ladies Have You Heard?

By Doris Thomas

Lancaster Extension Home Economist

FEBRUARY IS POTATO LOVER'S MONTH

Potatoes are America's favorite vegetable–and for good reason. Not only only are they delicious, versatile and a great economy value, but now potatoes have a better nutrition story than ever before. New studies show that a medium potato (1/3 pound) provides 50 percent of the U.S. RDA of vitamin C, 15 percent of vitamin in B6 and iodine, 10 percent of niacin, and 8 percent of thiamin, iron, folacin, phosphorus, magnesium and copper. The potato also has the most potassium, 750 mg., of any commonly eaten food and provides 2,710 mg. of dietary fiber. And all that nutrition is packed into only 110 calories, with little sodium and no fat.

There's no better time to celebrate the potato's important nutritional contribution than now, because February is Potato Lover's Month. You'll find good prices and potatoes are always a family favorite. Here are recipes to show just how versatile the potato can be, but don't forget the all-time favorite "plain" potato-baked, mashed, boiled and French fried.

To Bake: Scrub, pat dry and prick the potato in several places with a fork. This allows steam to escape, preventing the potato from bursting. In a conventional oven: A medium potato (three per pound) will bake in 40-45 minutes at 400°F. But if you're cooking other foods at the same time, the potato easily adapts. Just adjust the time according to the temperature. Bake directly on oven rack or on a cookie sheet. Potatoes are done when they are soft when gently squeezed with a mitted hand. Don't wrap potatoes in foil as it steams, not bakes, the potato. In a microwave oven: Use uniformly-sized potatoes. On a double layer of paper toweling or paper plate, place potatoes in a spoke fashion with smaller ends toward center. "Baking" time is usually four minutes for a medium to large potato (six ounces), plus one to two minutes for each additional potato. Turn potatoes halfway through baking and allow five minutes "standing time," since potatoes will continue to cook after removal from oven.

To Mash: Prepare boiled or steamed potatoes (see below); drain, peel. Using a potato masher, electric mixer or ricer, mash potatoes. Gradually add milk, salt and pepper to taste, and if you like, a bit of butter or margine (use skim milk if you're counting calories). The texture of the potatoes will depend on the amount of milk used. The more milk, the creamier and thinner the potatoes will be.

To Boil Or Steam: In a heavy saucepan with tight-fitting lid, cook potatoes in about one-inch of boiling salted water until fork-tender. To steam, place potatoes on wire rack in pan and add water to just below level of rack. Whole, 30 to 40 minutes; cut-up, 20 to 25 minutes.

To French Fry: Cut raw potatoes into strips about ¼-inch thick. Toss strips into a bowl of ice and water to keep crisp and white while cutting the remainder. Don't soak. Pat the strips dry with paper towels. Heat about four inches of salad oil to 390°F. In a deep fat fryer or heavy saucepan. Place a layer of potato strips in a wire basket and immerse basket in hot fat; or place strips, a few at a time, directly into the hot oil. Cook about five minutes or until golden brown and tender. Drain well on paper towels.

Investigate bank services before selecting

NEWARK, Del. – Does a visit to your bank make you feel like Rip Van Winkle? Since 1980, financial services have undergone such rapid and profound changes that it may seem as if you've been asleep for 20 years. Suddenly, banking is no longer a simple passbook transaction between you and your friendly teller. Today's array of checking and savings options requires a guidebook, says Delaware extension urban home economist Mary Alice Morris.

As a consumer, you can make money from these changes–if you arm yourself with knowledge. Higher interest rates are the good news. But if you barely make it from paycheck to paycheck, higher bank fees may whittle away at your earnings.

To choose the account that's right for you, decide which services you need, and compare costs and rates of return. Investigate the options at several institutions.

As Rip might well have asked, why is there suddenly so much choice?

The revolution is banking was spawned by computer technology. It gathered momentum when rising interest rates of the late 1970s and '80s spurred savers to move their money from low-yielding bank passbook accounts into high-yielding money market funds offered by brokerage houses. In reaction, the deregulation acts of 1980 and 1982 lifted restrictions on banks. Ever since, they have been vying with brokerage houses, savings and loan institutions, and other companies to offer one-stop service.

Some of the most interesting one-stop package deals combine more than savings and checking. Like the cash management accounts introduced originally by brokerage houses, they allow you to pay bills by check or electronic fund transfer and to put money into savings. Some such accounts also allow you to buy or sell securities through a broker, use a debit or credit card, buy real estate and insurance, or borrow money.

Every financial institution seems to offer a different combination of services, different rates of return, different terms, and a different minimum initial deposit, Morris says. If the options make your head spin, however, don't expect much guidance from your teller. Even at your local bank, a personal relationshiup with a teller may soon be the exception. As automated teller machines proliferate, tellers will become too expensive, branch banks will close, and chances of dealing with a person, let alone a person you know, will decrease, especially if you're a "small saver."

As electronic transfer of funds becomes more common, another familiar procedure, the return of your cancelled checks, may also be doomed, Morris says. But for the banks' fear of consumer resistance, the service would have disappeared already. Inevitably, checks will one day be "truncated." While you may have a carbon copy of your itemized monthly statement as proof of payment, you'll likely have to pay a fee to obtain the original check.

Technology will play an even greater role in the future, Morris says. Banking from your car has become a familiar convenience. Some day we'll all be banking from home with our personal computer and a telephone hookup.

It's enough to make Rip pluck his beard in consternation.

Protect Your Investment

Take the guesswork out of Heifer rations

Don't take chances with the breeding or milking potential of a new born heifer. Make sure her ration contains everything needed to raise a healthy cow who produces to her full genetic potential.

The best protection for your investment is Young's Heifer Products. Early Gro milk replacer, Nutri Nuggets pelleted pre-starter, Wean & Gro Premix, and Heifer Gro Premix to meet her changing mineral vitamin requirements.

From birth to breeding, our program for healthy, fast-growing herd replacements is economical since it is built around forages and grains you already have on hand.

Young's herd replacement program works because it provides the proper nutrition that allows heifers to reach breeding weight sooner. That gain in milk production, heifer after heifer, soon makes a difference in your milk tank.

To have the Young's Advantage protecting your investment in dairy herd replacements, contact your Young's representative. Find out just how good your heifer can be.

The Young's Advantage:
Quality products making better use of your feeds.

THE MICRO WAY

LANI BLOOMER

Cherries are traditional for Washington's birthday, so here are several cherry recipes to help you fill the bill – or Tom, Dick, or Harry, etc! (Sorry 'bout that!)

A cherry pie is a traditional dessert at this time of year. But a two crust pie is one that you can't cook in your microwave alone, because the bottom crust won't cook. You can, however, combine your microwave with your range to cook the pie. The microwave cooks the filling quickly, and the range oven cooks and browns the crust. Using this combination, you get a browned, cooked pie in less than 25 minutes!

Two Crust Cherry Pie

1. Prepare any cherry pie, using your favorite recipe. Use any double crust recipe, and put the pie in a microwave safe pie pan.

2. Use your favorite filling recipe, but keep in mind that there will be slightly less evaporation of the juices when you partially cook the pie in the microwave. (So the filling will be juicier than when you cook the pie in the range oven for the whole time). If you are using a canned pie filling, use it "as is." If you are mixing your own filling, take out one or two tablespoons of any liquid used in the recipe, OR add a little (1 teaspoon or so) more thickener. Put top crust on just as if you were fixing the pie for the range.

3. Preheat your range oven to 450°F. While your oven preheats, microwave the pie on high for 7-12 minutes, until the filling is bubbling near the center. Rotate the pie ¼ turn after 4-5 minutes. If the filling bubbles too hard on the edges, reduce the power to medium high (70,7) for the last part of the microwave time.

4. When the filling is bubbling transfer the pie to your range oven and bake for 10 to 15 minutes until the top crust is browned. Cool slightly for the filling to set before serving.

A cherry pie takes 25 minutes to cook, but if you have even less than 25 minutes you can still have a delicious cherry dessert by making Quick Cherry Crunch. It takes only five minutes to prepare and ten minutes to cook! It is sort of a cross between a cherry cobbler and a cherry crisp. Serve it a-la-mode for a special treat.

Quick Cherry Crunch

1 can (20-22 ounce size) cherry pie filling

3 tablespoons margarine or butter

⅓ cup EACH: flour, sugar, quick rolled oats (uncooked), chopped nuts, and coconut.

1. Spread cherry pie filling evenly in a 9" cake pan, or an 8" square pan.

2. Melt margarine or butter in a small mixing bowl on high for 30-45 seconds.

3. Add dry topping ingredients to melted margarine and mix until crumbly and evenly combined. Sprinkle evenly over cherries.

4. Cook on high, uncovered, for 10 minutes until bubbly all over. Let stand 10 minutes before serving. Serve warm or cold, with whipped topping or ice cream, as desired. Serves 4-6.

Tip: This crunchy topping could be used on any fruit filling, or as a topping for a crumb crust pie if desired.

The Chocolate Mystery Cake is a heavy, moist cake that almost seems like fudge. Part of the mystery comes when your guests try to figure out what makes it so moist and delicious. The other part of the mystery comes when you try to figure out where the cherries went!

Chocolate Mystery Cake

1 package Devil's Food pudding cake mix (such as Pillsbury Plus or Betty Crocker Super Moist)

3 large eggs

1 can (21 ounce) cherry pie filling

1¼ cups powdered sugar

2 tablespoons milk

4 maraschino cherries, cut in half

1. Grease and sugar a 12-cup plastic bundt pan. Pretend the sugar is flour and sprinkle it over the grease just like you flour a cake pan for the range. (Do not flour pans for microwave cakes, use sugar instead.)

2. Combine the cake mix, eggs, and cherry pie filling in a large bowl. Using an electric mixer, beat for 2 minutes on high speed. Pour into the prepared pan.

3. Rotating pan every 6 minutes, microwave on medium power (50,5) for 18 minutes. Then cook on high for 4-5 minutes longer, until the top is almost dry and a toothpick inserted near the center comes out clean. Note – this dense moist cake takes longer than most other bundt cakes to cook.

4. Let cake stand 10 minutes, then turn out onto a serving plate. Cool completely before glazing.

5. When cake is completely cool, combine powdered sugar and milk, stirring until smooth. Spread glaze over cake, letting it run down the sides. When the glaze has set a few minutes, place cherries (cut side down) around the top of the cake. Store coverd.

Note: The cooking times given above are for 600-700 watt ovens. For 500-600 W add 10 seconds to each minute; for 400-500 W, add 20 seconds to each minute.

Greencastle 4-H Horse and Pony Club

The Greencastle 4-H Horse and Pony Club held their meeting at the Bayshore Library in Greencastle.

Two members gave demonstrations. Philip Coady talked about novicular bone disease and Lee Golden gave a demonstration on barrel racing and pole bending.

Chris, Paul and David Rice talked about the 4-H Drill Team that performed at the Farm Show.

Tina, Belinda and Teresa Geesaman talked about their stay at Farm Show and the different kinds of horses there. Annette Geesaman talked about her blue form.

The club welcomed three new members, Kathy Plasters, Joey Weisenbaugh, and Laura Gorden.

Airville Milk and Money Club

The Airville Milk and Money Club held their monthly meeting on Feb. 14 at the home of Kenton and Kim McCleary.

The members took part in the Hoards dairyman contest. For roll call, the members gave a cow a valentine.

Tim Warner and Kim McCleary gave demonstrations for the members.

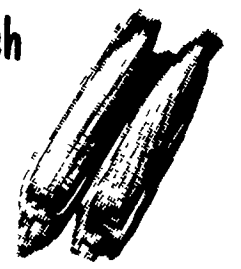
Seeding, Weeding and mulch more



For the avid gardener

Gardening from an easy chair is one of the high points of winter. About this time every year, it's a good idea to collect all the catalogs that have been coming in over the past few weeks and settle in for a good read, says Jeff Jabco, Delaware County Cooperative Extension agricultural agent.

Most garden catalogs offer a lot more than just an order list of seeds and plants. Some are packed full of useful information on culture and care, on what to plant where, how to use plants, and full descriptions of new varieties. Many of the best also give useful information on plant hardiness, disease and pest resistance and soil requirements of the plants and seeds they offer.

Some garden catalogs are designed for the specialist and offer all the latest on roses or daylilies or evergreens, while others are general purpose ones designed to serve both vegetable and landscape gardeners in the same publication.

If you haven't ordered catalogs because you generally buy locally, you might like to order a few anyway for background information and new ideas You'll find them listed in the backs of magazines and Sunday supplements to the newspaper You can also go to the library and look through their collection of garden catalogs so you can order those that appeal to you, reflect your region and your garden best. Most catalogs are free, but a few like White Flower Farm, charge a nominal fee which is applicable to your first purchase.

Reading through catalogs is fun. Before you know it, you may have redesigned the succession of plants you usually grow or you may find you are ready to experiment with new varieties and even new plant materials altogether. Even if you order nothing at all, you will be ready when you buy your spring supplies at a local garden shop.

However, if you do order, you may want to exercise a bit of caution and restraint – it's easy to over order. Just because you have visions of a well-stocked vegetable or flower garden ten packages of seeds to fill a five by five growing area will certainly be just too much.

Read through the catalogs and pick out the types of flowers, vegetables and ornamentals you want. Then read through the varieties of each type, note their differences, and select those that suit your taste, space and garden. As you make selections, double check for hardiness, sun and other culture requirements. Most catalogs have this information in the text of the general description or on a composite chart. You will also find information on plant size at maturity and when to plant.

You will notice that hybridized plants and seeds are much more expensive than an open-pollinated or common ones. Hybrids are developed to strengthen a particular characteristic not usually associated with that strain and often warrant the extra expense. Read the full descriptions to be sure you get what you want.

Ordering by mail is convenient. You can often get varieties not available in your local garden or center or market. But unless you have had some experience with a particular seed company, you may have nagging questions about reliability. Here's a few things to keep in mind

• Do not be persuaded by extravagant claims. "The world's fastest growing," "hundreds and hundreds of blooms," and "Just $10 fully landscapes your lot," are some that should make you a bit suspicious.

• Understand what you are ordering. Look for the small print that tells you the size of the plant or bulb. Read through the advertisement carefully, and if you can, check what another seed or plant company has to say about the same item or read about it in your garden encyclopedia. You may find that the bulbs you want will do beautifully in a marsh but will have no chance for survival on your rocky slopes.

• Choose an established firm, preferably one that has a catalog. Not all "special offers" and "amazing trials" do. Order from firms in similar growing climates as ours Pennsylvania has several excellent seed growers and nurseries.

• Before you fill out your order, read instructions. Most companies want orders listed in a particular way. Most also ask that you pay in advance, and many ask for an additional fee to cover the cost of postage and handling

Children need help to develop a good self-concept

LAFAYETTE, Ind. — Self-concept is the way we think about ourselves and the feelings we have about ourselves. These thoughts and feelings can be positive or they can be negative. The person who has positive thoughts and feelings is said to have a healthy self-concept.

As adults, we can control and influence our feelings about ourselves. We can accept or reject others' opinions. We can monitor the events in our lives that cause us to feel one way or the other about ourselves.

A young child's self-concept, though, is determined mostly by the "messages" he receives from others, particularly his mother and father. These messages can be deliberate or unconscious, verbal or non-verbal.

Sometimes the message the child receives is not what the parents really intend. For example, a parent may insist on doing everything for the child, even the most simple things the child could do for himself. The parent thinks he or she is sending the message: "I'm doing all these things for you because I love you."

But really, the unconscious, non-verbal message the child may be getting is: "Always rely on Mom and Dad to do everything for you because you're dumb and helpless."

To understand a child's self-concept you have to try to see the world from his perspective. Even very young children are very occupied with developing competence — that is, learning to do things themselves. It is this continued striving for competence that pushes children to try new challenges and leads them from one stage of development to the next.

Parents can watch for the things a child can do for himself and encourage him to do them, even if he cannot do them perfectly. The more he learns to do for himself, the more positive his self-concept will be.

One of the most important factors in the development of self-concept is the parent's attitudes towards the child's successes and failures. If the most important people in his life view him as "dumb" or "helpless," it will be almost impossible for him to develop positive feelings of self-worth. Mockery and sarcasm are like the hot sun that causes a flower to wither. But praise is like the nurturing food that helps the self-concept develop and blossom.

In search of strawberries

BY DEBORAH STILES-RENZI
Staff Correspondent

Every year toward the end of January—first of February, I develop an overwhelming, irresistible craving for strawberries. Perhaps it's the snow blanketing the pastures or the mud pervading the kitchen (courtesy of somebody's gum boots) that has me longing for June and balmy summer days, but what is inevitable is a frantic search of the deep-freeze for that last (what--?—have they all been eaten before now?) box last year's frozen strawberries.

Like most farm and rural families in this area we eat locally or home-produced fruits and vegetables in season and preserve the surplus for when they are not. Our household is "seasonal" (reminds you of those little notes in restaurant menus about the melon--"in season only"); we follow the tradition of our immigrant ancestors in allowing the seasons to dictate the menus, with a little more leeway, thanks to the old chest freezer.

Local stores sometimes provide a meager selection of produce shipped from the warmer climes, and although citrus and the like are appealing (since you can't grow them at all here), does a green bean or broccoli head that's traveled two thousand miles compare tastewise or pricewise with one grown last summer by your own two hands (or your neighbor's)?

Of course not. So you head for the basement. Get in the freezer. And toss out pork chops and corn and apples and half of the freezer cartons in there to find what you're craving.

Which brings me back to strawberries, and why my family looks at me a little funny every February when I disappear head first into the freezer in the great quest for the elusive frozen red fruit.

I HATE strawberries.

But I eat them in February.

Hurry up, spring—even the frozen zucchini's starting to look good!

Keeping Warm

Our furry caterpillar weather predictor must have been over anxious when he predicted a mild winter. This winter weather is certainly not typical of the last several years but it certainly is a lot more like what I remember of my childhood. There seems to be adequate snow fall every four or five days to keep the sleding and ski slopes in good condition. And the weather man has become the hero of television, especially when he predicts enough snow for school delays or cancellations.

Although a lot of attention is given to the amount of snow fall that we receive, another important consideration is the temperature outside. Recently, our 4-H ski night was cancelled due to the wind chill factor, even though the snow cover provided perfect skiing conditions. Frostbite can be a major concern in extended outdoor temperatures.

Another health concern with the cold temperatures is hypothermia. Accidental hypothermia occurs when a person is exposed to severe cold without proper protection. But in the elderly, this condition can develop after exposure to mildly cold temperatures. Recently in a phone conversation, my grandfather reported that he was snowed in but he was keeping warm. And that is good news!

The elderly are less able to respond to long exposure to cold, increasing their chances of accidental hypothermia. Hypothermia is a drop in internal body temperature, and can be fatal if it is not detected and treated promptly. The condition occurs when the body temperature drops below normal, usually to 95°F or lower.

In addition to low body temperatures, other symptoms include: an unusual change in appearance or behavior during cold weather, slow and sometimes irregular heartbeat, slurred speech, shallow very slow breathing, sluggishness and confusion.

Dressing warmly, even indoors is a way to prevent hypothermia. The purpose of winter clothing is to insulate the body and to retard any heat loss from the body. Contrary to what some people may believe, clothing does not create heat. Clothing prevents body heat from radiating out to colder air spaces by trapping it in air pockets between layers of clothes and air spaces within crimped yarns and fibers of a garment.

In addition to wearing warm fabrics like wool, acrylic and down, the way we dress can also keep us warm. Dressing in layers is an excellent and stylish way of keeping warm. The first layer of clothing worn next to the body should be absorbent like cotton. This will prevent moisture from trapping between your skin and the garment, which could make you feel cold and clammy. It is interesting to note that wearing several layers of thinner clothes will keep you warmer than wearing one bulky garment of the same thickness.

So, when cabin fever strikes this winter...remember the importance of dressing warmly as you clamor outdoors. Who knows, the furry caterpillar prediction was a little off. Maybe this year the groundhog will be wrong, too!

Penn State is an affirmative action equal opportunity employer

Families contribute to caring for elderly

NEWARK, Del. — Today 12 percent of the U.S. population is over age 65. If current trends continue, by the year 2000 half of all Americans will be over 50 and a third will be over 65.

As more families become concerned about caring for elderly relatives, people are starting to ask how providing this care will affect the financial well-being of adult care givers and their families.

Research on this topic as reported in the U.S. Department of Agriculture's "Family Economics Review" shows that, while government programs like Social Security and Medicare provide most of the economic support for the elderly, families also make important contributions. Much of this aid comes in the form of services such as housing or transportation.

"Studies have shown that only about four percent of families regularly make direct financial contributions to their elderly parents," says University of Delaware extension home economist Debbie Amsden. "The size of these contributions is usually limited and very few families report a financial hardship due to such help. This suggests that government programs rather than the family are currently the primary means of transferring income to the elderly."

On the other hand, families play a major role in providing essential services for the elderly. While there are agencies which, for a fee, furnish nursing care and transportation or perform homemaking tasks, families are more likely to provide such services themselves rather than pay for them, the home economist says.

Research also indicates that family members perform these services as part of a mutual exchange of resources, not just because they have to. Indeed, the care given often covers far more than the older person's actual needs.

It is highly probable that the elderly will live in some type of shared housing late in life, Amsden says Today the shared home is often that of an adult child.

Sharing housing enables older family members to stretch their incomes. However, combining households may lead to overcrowding and place demands on adult children which deprive other family members of needed attention. In most shared living arrangements the family does the housework, prepares meals, shops and provides transportation for the older individual. As this person becomes less able, family members also assume responsibility for his or her grooming, physical care and financial management.

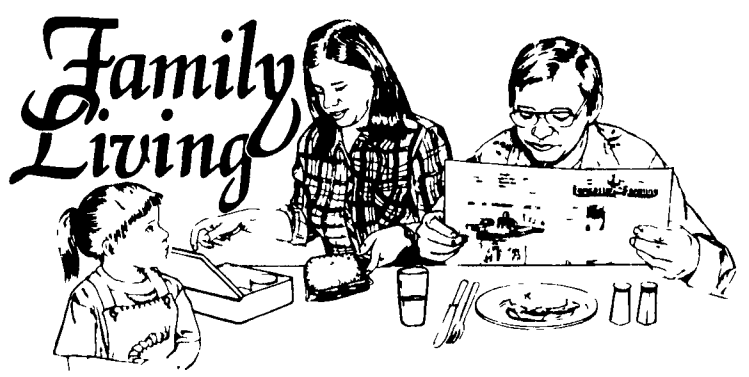
Over the rest of this decade, America's elderly population is expected to increase — particularly the most aged group, which includes those most likely to have low incomes, health problems and functional limitations and so will be most dependent on family and public support.

Both families and public programs for the elderly face a challenge as they try to respond to this growing level of need, Amsden says. Trends affecting younger age groups, such as the rising number of women in the work force and the high percentage of single parent families, limit the time and financial resources available for helping elderly relatives.

"Because of these trends," the home economist says, "in the future more people will likely use private agencies to provide home health care for their aging relatives."

To help meet the challenges and cope with the pressures, the Delaware Cooperative Extension Service is sponsoring meetings in New Castle and Susex Counties for families who care for elderly relatives. One of the issues discussed is the process of selecting a home health care agency.

For more information about these meetings, call the New Castle County Cooperative Extension Service at 451-1239 or the Sussex County Cooperative Extension Service at 856-5250.



Ida's Notebook

Ida Risser

Recently we've had snow on top of snow and then more snow on top of that. Each prediction of a snowfall sends people scurrying to the grocery store. The supermarkets expect a surge of customers just before a storm. Of course people don't like to drive on snow and ice--I don't either. But, wouldn't you think most folks would have an ample supply of food to last several days?

My freezers hold enough food to supply us from one year to the next with a small carryover. And, the ten shelves in the cellar hold rows of tomatoes, pickles, and a half dozen kinds of fruit. We buy flour in 25 pound bags and keep a surplus of sugar on hand. It sounds as though I wouldn't need to go to the store at all, but that certainly isn't the case.

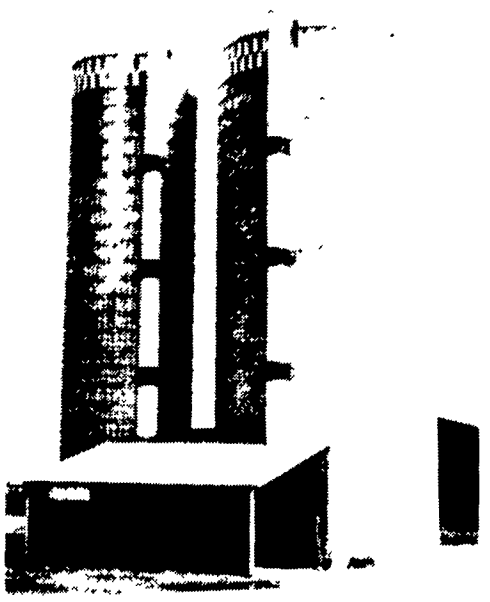
We would most certainly miss bread as that is one thing that I don't bake. I make all kinds of cakes, cookies and enjoy baking pies but my family would have to exist on biscuits and corn bread if there was no store open.

Another thing that we've started buying in recent years is catfood. This year we had four kittens born late in the fall and they are very playful in the snow. I simply can't believe how they romp and jump when I shovel and sweep the walk and porches. Usually, we only have grown cats during the winter.

A fresh snowfall seems to please pheasants too. They appear to be playing a game as they chase each other in a big circle. From my kitchen window, I can watch a cockbird that lives in a stand of evergreen trees and raspberry brambles. He too cavorts in the new fallen snow.

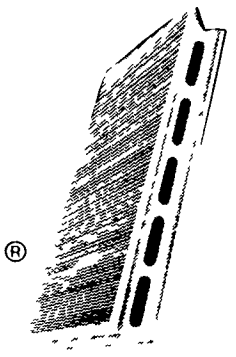
So even though Lancaster County's groundhog predicted an early spring, I think that we'd better be prepared for more winter.

MADISON® SILOS



Your Best Silo Buy!

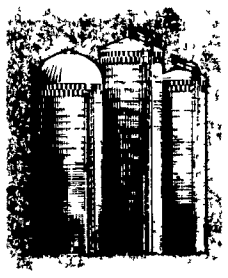
The secret is the Vibra-Cor® Stave.



Unique truss-beam design of the exclusive Madison Vibra-Cor Stave makes it the strongest in the industry.

Add to that Madison's new fiberglass doors and Kleen Chute to match... Madison's rattle-free, wind resistant roof... Madison's "full-measure" hooping... Madison's attractive light gray stave color... plus extra care in construction by Madison's own crews, and you have the highest quality silo it's possible to build.

Is it any wonder that one out of every four silos sold in America is a Madison?



MADISON "SYSTEM OF CHOICE"...

gives you the logical structure for every feed you grow. Madison Silos for corn silage. Madison Nutri-Matic® for medium moisture haylage, Madison Grain-O-Matic® for high moisture ground and shelled corn and Madison's new "Little Kernel" for high moisture shelled corn. Madison Silos save you money because there is no need to over-structure.

Rachael Hixenbaugh named Wool Queen

BY BARBARA RADER

HARLANSBURG — Rachael Hixenbaugh, the daughter of Mr. and Mrs. Joseph Hixenbaugh, was selected Lawrence, Butler, and Beaver Countys' Lamb and Wool Queen during their recent mid-winter annual meeting.

Rachael, 16, is following in the footsteps of her sister, Kathy, who was Lamb and Wool Queen in 1981 and a runner-up in the state Wool Queen Contest in 1982.

Before announcing the results of the contest Shirley Dunn, queen contest director, said, In the last four years we've had two state winners and two state runners-up."

Peggy McCrumb, Mars, was recently crowned the 1985 Pennsylvania winner as was Kathy Hixenbaugh, Beaver, in 1982 Runners-up were Carol Shuler, Fenelton, in 1983; and Mary Sue Shick, New Castle, in 1984.

Rachael's family began raising sheep 11 years ago when her eldest sister jointed 4-H Starting in 1975 with two breeding ewes, the Hixenbaughs rented a barn two miles away to house their sheep

Showing sheep since she was eight years old, Rachael has become increasingly interested in the industry She has also been quite successful with her sheep, showing the Suffolk grand champion ewe and ram in the open show at the recent Pennsylvania Farm Show Her winning streak continued as she captured the junior grand champin Suffolk ewe, second place middle heavyweight market lamb and secured a fourth in showmanship in her age division

A member of Stockmen's 4-H Club and Hookstown Beaver County 4-H Club, she raises Suffolk and Hampshire breeding stock and market lambs She showed the grand champion at last year's roundup during the Hookstown Fair

In addition to showing at local county fairs, she also exhibited at the Keystone International Exhibition

Rachael is now learning to spin wool from her mother. Her interest in wool has also led to designing a wardrobe that includes several wool items She has participated in several Ladies Lead Line contests, showing off the beauty of lambs wool while her ewe lamb shows off its fle ce

Rachael's twin sister, Wendy, and her brother, Wayne, also show a growing interest in the industry, reflecting their parents' interest

In competing for the queen's title Rachael was judged on appearance, personality, ability to represent commodities, related sheep activities and other activities

Eighteen-year-old Janet Shick, the daughter of Mr and Mrs Joseph Shick, was selected alternate in the tri-county contest A 1985 graduate of Shenango High School, she is now attending Penn State University majoring in animal bioscience.

Janet has been an active 4-H'er since she was eight years old and a member of Lawrence County s Junior Livestock Club She has been a proven winner with her market lambs, which won her grand champion pen of lambs.

Janet participated in the 1981 state contest Make it with Wool, and the Ladies Lead Line competition, showing off her sewing abilities

The third contestant, Ann Kriberney, the daughter of Carolyn Kriberney, Karns City, also enjoys the Ladies Lead Line competition and has captured first place in the Lead Line contest at Farm Show

Ann graduated in 1984 from North Allegheny Senior High School and Beattie Vo-Tech in drafting and design. She has carried sheep in 4-H and has a horse She is a Hereford enthusiast and received the 1984 Outstanding 4-H award at the Butler Farm Show

Ann has raised sheep for eight years and showed the champion Suffolk ewe in 1983, reserve champion Suffolk ewe in 1984, reserve champion showman in 1983, and champion fitter in 1983 during the Butler Farm Show

Rachael received four yards of wool fabric from the Minnesota Fabrics, Beaver Janet received a hand-knitted wool poncho made by Mary Estell , Alliquipa, and a $10 gift certificate from Hickory Hill Wool Shop, New Wilmington, went to Ann.

Rachael Hixenbaugh, newly crowned Lawrence, Butler, and Beaver County Lamb and Wool Queen, accepts congratulations from 1985 Pa. Lamb and Wool Queen Peggy McCrumb.

Homemade baby foods can be wholesome, nutritious

NEWARK, Del. — If you prepare nutritious, well-balanced meals for your family, do the same for your baby. You can make baby foods that are as good or better than the commercial brands.

You don't have to be a gourmet chef to make baby food, but you do need a good working knowledge of nutrition and sanitary practices. Bacteria from improper food handling can seriously upset a baby's sensitive digestive system, says Wendy Weckesser, a University of Delaware dietetics student working with the Cooperative Extension Service.

Before preparing baby food, wash your hands well with hot, soapy water. Check your hands for infected cuts or hangnails, since infections carry harmful bacteria.

Keep work surfaces and all equipment spotlessly clean by washing in hot, soapy water, rinsing with hot water, and allowing to air dry. It's a good idea to use a plastic rather than a wooden cutting board, because bacteria can hide in cracks in a wooden board. And keep animals away from food and counters.

Choose baby food recipes from a reliable source and follow the directions carefully. Generally, meats and vegetables prepared for the family can be used for baby if they are unsalted, unsweetened, and steamed or boiled in a minimum amount of water. Avoid adult-type flavorings such as catsup, paprika, Worchestershire sauce, mustard, herbs, spices, bacon, and margarine. Also, don't coat meat in flour and brown in fat when making baby stew. For high nutrient retention, puree or chop foods as soon as cooked, and feed the baby promptly.

Some baby foods are easy to prepare at home. You can mash ripe bananas and thin with milk, formula, or unsweetened fruit juice. Mash unseasoned cottage cheese, cooked carrots thinned with cooking water, stewed fresh fruits such as apples with no added sugar, spices, or salt, or fruit canned in its own juice with no additives.

Be sure the food is smooth, evenly mashed, and thin enough for the baby to swallow easily Make enough for a single meal, or store some for later use in small, clean, tightly sealed containers or baby food jars. Refrigerate no longer than two days, and freeze no longer than one month.

You may decide to serve homemade baby food in combination with commercial products. This is fine, Weckesser says. The primary consideration is to provide wholesome foods that meet a baby's nutritional requirements.

Make desserts for presidents' birthdays

ROSEMONT, Il. – February is time to celebrate famous birthdays. Both these desserts are wonderful excuses for a party, a time for fun during this bleak and chilly month. If not a party, a special dessert in honor of a famous president will certainly lift the family's spirits or be appropriate for a club gathering.

Lincoln Log, in honor of the rail-splitter President (born Feb. 12, 1809), has a spongy, chocolate cake as its base. The filling is stabilized, sweetened whipped cream and apricot pastry filling. The two "knots" are made with a split cupcake and a creamy butter frosting covers the log. Borrow the children's toys to build the log cabin centerpiece.

The pie honoring George Washington (born Feb. 22, 1732) uses dark, sweet cherries and cherry flavor gelatin. Whipped cream folded into whipped gelatin gives a fluffy filling, while additional whipped cream and a hatchet are used to decorate the top of the single crust pie.

Cream is a good source of vitamin A and also supplies modest amounts of riboflavin (vitamin B_2) and calcium. It should be whipped in a bowl that is small and deep enough to hold the beaters in good contact with the cream. Place cream, bowl and beaters into the freezer for about ten minutes just before whipping; the cream will whip more easily and quickly. One cup of whipping cream yields two cups whipped.

LINCOLN LOG CAKE

CAKE:
¾ cup sifted cake flour
¼ cup cocoa
½ teaspoon baking powder
½ teaspoon salt
4 eggs, at room temperature
¾ cup granulated sugar
1 tablespoon water
1 teaspoon vanilla extract
Confectioners sugar
FILLING:
1 teaspoon unflavored gelatin
¼ cup cold water
1 cup whipping cream
2 tablespoons confectioners sugar
½ teaspoon almond extract
1 can (12 oz.) prepared apricot pastry filling
FROSTING:
3 tablespoons butter
¾ cup sifted confectioners sugar
2 squares (2 oz.) unsweetened chocolate, melted, cooled
½ teaspoon vanilla extract
Dash salt
1 egg white
¼ cup sifted confectioners sugar
1 unfrosted cupcake

Preheat oven to 375°F. For cake roll, butter bottom of a 15 x 10-inch jelly roll pan; line with waxed paper. Butter paper and sides; dust with flour; set aside. Sift together flour, cocoa, baking powder and salt; set aside. Beat eggs on highest speed of mixer until thick and lemon-colored. Add sugar, a little at a time, beating well after each addition. Beat until thick and fluffy. Fold in water and vanilla. Gradually fold in flour mixture until smooth. Spread evenly in prepared pan. Bake 12 to 15 minutes. Meanwhile, sprinkle a kitchen towel with confectioners sugar. Loosen edges of cake immediately and turn out onto towel. Peel of waxed paper. Roll cake up in towel, starting at narrow end. Let stand on wire rack 20 minutes.

Go patriotic and celebrate two famous February birthdays.

Meanwhile, for filling, sprinkle gelatin over water to soften. Heat over low heat until dissolved, stirring constantly. Cool to room temperature. Combine whipping cream, confectioners sugar and extract. Beat until stiff peaks form. Fold in gelatin mixture. Cover and chill 5 to 10 minutes. Unroll cake and remove towel. Spread cake with apricot filling and whipped cream mixture. Roll up again. Cover and chill at least 1 hour.

For frosting, cream butter and ¾ cup confectioners sugar until light and fluffy. Blend in chocolate, vanilla and salt. Beat egg white until soft peaks form. Gradually beat in ¼ cup confectioners sugar until stiff. Fold chocolate mixture into egg white. Cut cupcake in half horizontally. Secure to cake roll in 2 places with wooden picks to form "knots" on the log. Frost cake. Draw tines of a fork lengthwise over top of log to resemble "bark." Chill thoroughly before serving."

NOTE: *Unfrosted cake roll may be wrapped in freezer paper and frozen up to 1 month. Thaw in refrigerator; then frost. Do NOT allow to become warm.

WASHINGTON PIE

CRUST:
1 cup all-purpose flour
1/8 teaspoon salt
3 tablespoons butter
3 tablespoons lard
3 to 4 tablespoons milk
FILLING:
1 can (16 oz.) dark sweet cherries
1 package (3 oz.) cherry flavor gelatin
2 tablespoons tawny port wine
1 teaspoon fresh lemon juice
1 cup whipping cream
2 tablespoons confectioners sugar
½ teaspoon almond extract
Sweetened whipped cream

Preheat oven to 425#F. For crust, combine flour and salt. Cut in butter and lard until mixture resembles coarse crumbs. Add milk, as tablespoonful at a time, until flour is moistened. Shape into a ball. Roll out on lightly floured surface to form a 13-inch circle. Line a 9-inch pie plate with pastry; flute edges and prick inside with the tines of a fork. Bake 10 to 12 minutes or until golden. Cool completely on wire rack.

Meanwhile, for filling, drain cherries, reserving juice (1 cup). Chop cherries; pat dry on paper toweling; set aside. Heat cherry juice to boiling. Remove from heat, add gelatin, stirring until dissolved. Stir in wine and lemon juice. Chill until consistency of egg whites. Meanwhile, combine whipping cream, confectioners sugar and extract. Whip until stiff peaks form. Whip gelatin until fluffy; fold in whipped cream and cherries. Pour into cooled crust. Refrigerate 3 to 4 hours. Garnish with rosettes of whipped cream piped through a pastry tube.

Spinning wheels and looms fill Barbara Elliott's home

BY SUZANNE KEENE

LANCASTER — In the three years since she began collecting early textile equipment Barbara Elliott has amassed an impressive collection of spinning wheels and looms.

Her collection includes about 15 different spinning wheels, most of them antiques, and three looms. Nearly every room of the Elliotts' old farm house holds at least one wheel or loom, and some rooms are literally filled with them.

The collection, which Barbara and her husband, John, work on together, includes a number of spinning wheels made by Lancaster County craftsmen. They have a Humes wheel made in the county; a wheel made by Samuel Henry, a Lampeter Township craftsman; and an Irish castle wheel made in the 1830's by Daniel Danner of Manheim.

Their collection also includes a New England chair wheel and a double treadle, double wheel flax wheel.

"Every one is different — even the ones from Pennsylvania," Barbara says. Each wheel, she explains, has a different feel and individual characteristics that set it apart from all the others.

Barbara's collection also includes two modern wheels which she uses for production and demonstrations. For demonstrations she uses a Toika wheel made in Finland, which looks like an antique but is really new. Barbara has demonstrated her craft at Landis Valley Harvest Days at the Pennsylvania Farm Museum, the Fall Festival at the Hershey Museum of Life, Bird-in-Hand's 200th Anniversary celebration, and the Lampeter Fair.

She has also lectured at the Harrisburg Chapter of the Daughters of the American Revolution.

Barbara enjoys sharing her craft with others, and dresses in period costume for her demonstrations. She and her husband also enjoy participating in Rendezvous, where people dress and live as their ancestors did in the 18th century.

For production purposes, Barbara prefers to use a Castle style wheel, a Louet from Holland. This style of wheel is a faster wheel with a single treadle. The older spinning wheels, she says, are often slower and have quirks that make them more difficult to use.

Although Barbara learned to spin on an old wheel, she recommends that beginners learn on a new one. A drop spindle that is used standing up is also a good way to learn, she says.

Barbara's interest in spinning and weaving began when she was working toward a home economics degree at Mansfield University. And, while she did have a short weaving course in college, she says she is basically self-taught.

"I have had to learn and study myself," she says, explaining that she has relied heavily on books and practice. Currently, she is studying about fleece selection and the characteristics of each breed's wool.

Each breed has particular characteristics and the spinner selects a fleece with the finished product in mind. For example, Cheviots have coarse wool, Lincolns yield a high luster yarn and Corriedales produce a soft fiber with lots of crimp. Spinners, Barbara explained, want a fleece with a staple length of two and a half inches or longer.

As a member of the Lancaster County Spinners and Weavers Guild, Barbara has had the opportunity to hear speakers on various fiber arts and to talk to other members about spinning and weaving. "We can help one another," Barbara says.

Barbara enjoys spinning and weaving and finds time for her craft in her busy schedule of caring for her two young children. She is hoping to be able to set aside time each day to devote to her spinning, but for now, she works whenever she can. Pooling her finished products with two other local craftsmen, Barbara and her coworkers market their wares under the name Lancaster Softwear.

She does some custom work and will soon be spinning yarn from dog hair for a client near Philadelphia. The woman, Barbara explained, would like to make a sweater from her Samoyed's hair. Some dogs' hair, Barbara explained, is considered as valuable as angora.

Most of the wool Barbara uses comes from a breeder in West Virginia, but some of the fleeces do come from Lancaster County. The fleece can be spun "in the grease," or without washing it to remove much of the lanolin, but Barbara washes most of her wool before spinning.

After the fleece is washed Barbara puts the wool through cards to straighten the fibers and to prepare them for spinning. The more the wool is carded, the smoother the finished yarn, Barbara explains.

When deciding how long to card the wool, Barbara considers how she wants her finished product to look. But, she said, "Nubby, ugly yarn, as a rule, sells better."

When the yarn is carded, it is formed into a fluffy roll called a rolag. Then it's ready to spin.

When spinning Barbara primarily uses two methods, the inch worm method which is done close to the wheel, and the long draw, which is done further from the wheel and yields a loftier yarn with less twist.

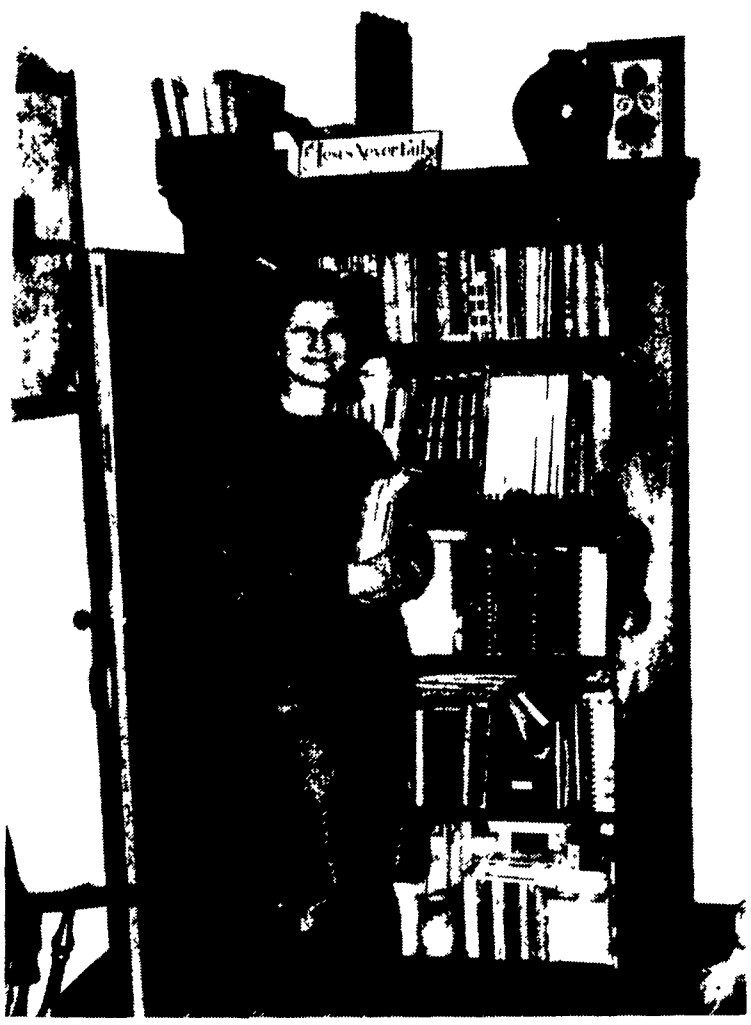
The thickness of the yarn is determined by the amount of wool the spinner lets through at a time. "You should be able to control the thickness," Barbara says, "but as a beginner, it just happens.

Single strands of yarn can be combined to form two-ply yarn, which is the most desirable type for knitting and weaving.

Barbara winds the yarn into a skein on a measuring wheel or a

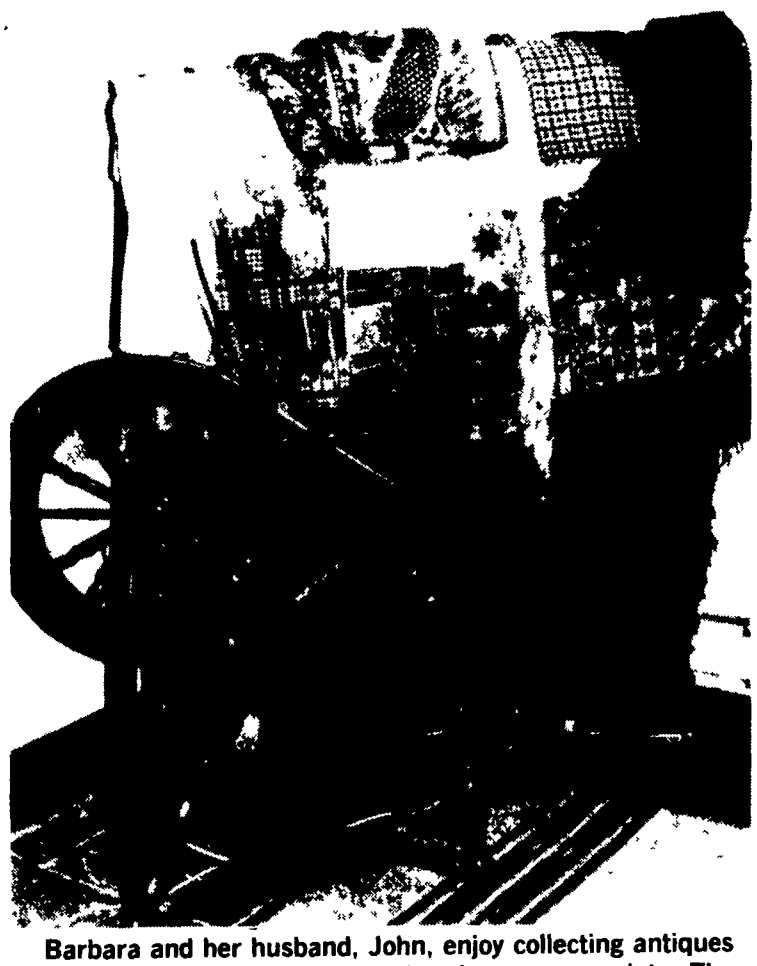
(Turn to Page B19)

Barbara Elliott works on a table runner she is weaving.



While Barbara enjoys spinning and weaving, she always finds time to cook. Here, she poses with her extensive collection of cookbooks.

Working the treadle with her foot, Barbara Elliott spins some fluffy wool into yarn.



Barbara and her husband, John, enjoy collecting antiques and have quite a collection of hand-woven coverlets. The coverlets and this spinning wheel are displayed in the Elliott's bedroom.

Make your own kitchen utensils

Today's kitchens feature hightech appliances, Space Age cookware, never-dulling knives and endless meals. Yet the use and need for the old-fashioned wooden kitchen spoon still exist.

Wooden utensils will not harm expensive pottery or china, nor do they conduct heat, and therefore will not burn the cook. Wooden tools are easy to clean and maintain, plus they are very attractive in almost any decor.

With so many positive points for wooden kitchen tools, it seems you would find a wide variety of high-quality tools on the market. Not so. Most wooden tools generally are poor quality and are limited to the wooden spoon and spatula design.

Dremel offers an easy-to-follow instruction sheet for making your own "quality" seven-piece kitchen tools and rack.

Making your own rack and tools gives you the freedom to select the grained woods in the color that suits your tastes. Ideally, fruitwoods such as apple, pear or apricot make beautiful tools. Or consider dogwood, rosewood or lemon for a more traditional appeal.

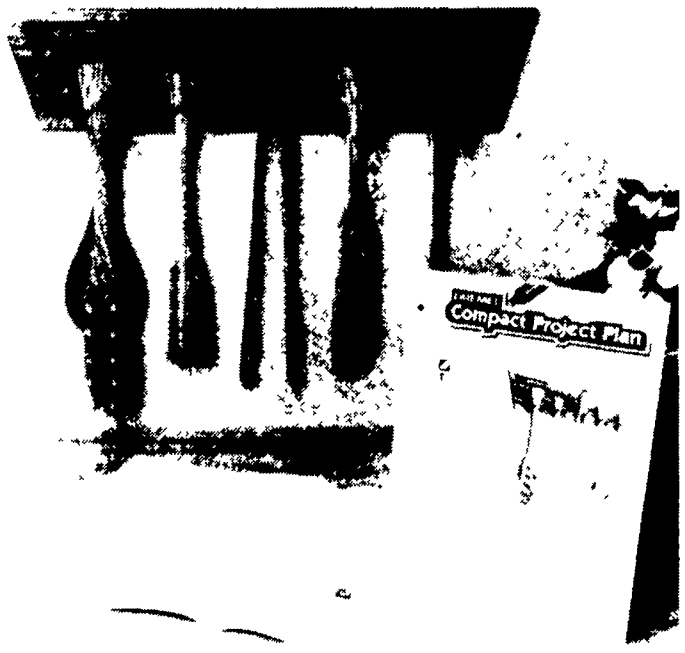
One of the pleasures of these projects is finding the perfect wood. Search out your materials in firewood stacks, orchards that have just been pruned, and scraps or leftovers from cabinetmakers and school shops.

The wood you choose can be "green," that is, it can be freshly cut from a live tree. But keep in mind that even though green wood is easier to carve, it tends to warp. This warpage mainly will effect the design and not the function.

Making your own tools allows you to customize and suit your cooking needs. The technique is more free form than most woodworking projects and therefore is excellent for a beginner.

The project sheet from Dremel will guide you through the gentle curves and personal embellishment of machine and hand carving. The simple techniques allow you to make a sort of personal statement while shaping a piece of wood to fit your hand, for your needs.

Finishing and maintaining your handmade tools require little more than sanding and several coats of mineral oil. Behlen's Salad Bowl Finish has been approved by the FDA for use with wood objects that come in contact with food. Apply several coats to the tools and they will retain a lustrous finish. Periodically reapply to extend the life of the utensils.



Lifestyle changes can reduce cancer risk

TOWANDA – Many magazine and newspaper articles have been written in recent months concerning cancer and our lifestyle and diet. Many sources are quoting parts of the National Academy of Sciences - "Diet, Nutrition and Cancer Study," without looking at the committee's findings as a whole.

The committee's findings are as follows: It is not presently possible, and may never be possible to specify a diet that will protect everyone against all forms of cancer; nevertheless, based on current evidence, dietary guidelines that are consistent with good nutritional practices are likely to reduce the risk of cancer.

There is sufficient evidence that high fat consumption is linked to increased incidence of certain common cancers such as breast and colon cancer.

The committee emphasizes the importance of fruits, vegetables and whole grain cereal products in the daily diet. Studies show that frequent consumption of citrus fruits and carotene-rich vegetables seem to lower the incidence of certain cancers. These recommendations apply to food as a source of nutrients–not to dietary supplements of individual nutrients. The study focuses on the relationship between the consumption of foods and the incidence of cancer in human populations.

In contrast, there is very little information on the effects of various levels of individual nutrients on the risk of cancer in humans. Therefore, the committee does not recommend large doses of individual nutrients. Large doses of vitamin A can be especially toxic.

Some parts of the world, especially China, Japan, and Iceland, populations that frequently consume salt-cured or smoked foods, have a greater incidence of esophagus and stomach cancer. Some methods of smoking and pickling foods produce higher levels of aromatic hydrocarbons and N-nitroso compounds. These compounds cause cancer in animals and are suspected of causing cancer in humans. Therefore, the committee recommends that consumption of salt-cured and smoked foods be minimized.

Cigarette smoking has a direct correlation to the incidence of lung, throat and mouth cancer.

Excessive consumption of alcoholic beverages, particularly combined with cigarette smoking, has been associated with an increased risk of cancer of the upper gastrointestinal and respiratory tracts. Thus, the committee recommends the use of alcohol in moderation.

Barbara Elliott

(Continued from Page B20)

yarn winder, then washes the skeins in hot water and detergent. When the water cools naturally to lukewarm, she removes it from the soapy water and rinses it in lukewarm water so as not to shock the fibers.

The excess water is removed by blotting with very little agitation and the yarn is hung to dry.

The yarn can be used in it's natural color or can be dyed. Because she has young children, Barbara will not use commercial dyes that contain harmful chemicals. However, she has found that she can create brightly-colored yarn by dying with Kool-Aid.

Barbara first wets the wool with cold water, then puts it into Kool-Aid dissolved in cold water. The mixture is cooked on the stove until whisps of steam form, then simmered for a half hour. When the temperature reduces naturally to lukewarm, she removes the yarn for the dye and rinses it in lukewarm water. The final product is a bright color that is colorfast.

If the fleece is dyed before it is spun into yarn, the resulting yarn will contain a variety of shades because the dye penetrates some parts of the fleece more than other parts.

Barbara knits some of the completed yarn into hats, scarves and mittens, and weaves some into table runners. She plans to weave a coverlet in the future.

A quick look around the Elliott's home, which was built in 1799, reveals to any outsider Barbara's interest in spinning and weaving. 'You get hooked on it," Barbara explains, as she spins a roll of fluffy wool into yarn.

Pre-Mix Convenience / Tank Mix Performance
Lasso
ATRAZINE
Monsanto
SHAKE WELL BEFORE USING
TWO UNITS
Pre-Mix Convenience
Tank Mix Performance

Using a pre-mix this year?

Make sure it's got the proven yield advantage of Lasso®.

Yes. You can get the convenience of a pre-mix without giving up the yield advantage of Lasso® herbicide.

Pre-mixed Lasso & atrazine will give you the same dependable, full-season grass control as the leading tank mix for corn, the same pigweed and yellow nutsedge control, too. You'll get the same lessened risk of atrazine carryover,* and the same proven yield advantage of Lasso—all without any extra mixing on your part.

With Lasso in the mix, you can always count on excellent crop tolerance. The fact is, plots treated with Lasso or Lasso and atrazine yield more because Lasso stresses young corn plants less than other full-season grass herbicides.

So if you want pre-mix convenience, make sure you get the proven performance—and the yield advantage you need. Start your corn with pre-mixed Lasso & atrazine. It's now available in mini-bulk, too. Ask your dealer for details.

Extension volunteers provide community service

MEDIA — If communities had to pay for the services provided by volunteers working with the Cooperative Extension Service, they would have to spend more than $45 billion a year nationally.

In fact, the dollar value of volunteer time is over five times greater than the entire Cooperative Extension Service budget, according to preliminary findings of a national study.

Extension Service programs operate in almost every county of the United States through the cooperative efforts of the U.S. Department of Agriculture, land-grant universities and county governing bodies. All county Extension agents work with volunteers.

The study, funded by USDA, is examining the benefit and impact of volunteers working with Cooperative Extension Service agents. The study indicates that approximately one in 80 Americans served as a volunteer in an activity with Extension.

During 1983 almost three million volunteers spent more than 71 million days on such activities, or 51 days for every day of assistance given by an Extension staff member.

Three-fourths of the volunteers were active in Extension 4-H, home economics, agricultural or community development programs, were Extension master volunteers, or worked with county agents on special community efforts such as flood disaster relief, farm-city tours, fingerprinting children, or fairs and events. Another fourth were volunteers from other community agencies or organizations, or individuals independent of any agency or organization.

The study found that more than 2.8 million volunteers helped to disseminate agriculture, home economics, community or youth development information about USDA or land-grant universities, reaching more than 48.7 million people. The topics included food for fitness, seed selection, weed and insect control, and consumer buying.

Although the study found some differences among counties and some unique activities, there was considerable consistency across the United States. The 315 counties in the study were a sample stratified by population. There was at least one county from all 50 states.

Urban centers like San Francisco, Denver, St. Louis and New York City were included along with counties with fewer than 1,000 people. The number of volunteers reported per county ranged from 39 to 18,000 with an average of 615.

In the study's next phase, researchers will interview 1,200 volunteers from sample counties about their volunteer activities. They also will ask about the good and bad effects of their experience.

Handicapped workshop set for March

COLLEGE PARK, Md. — Sensitivity for problems of the handicapped has become an educational concern in the world of farmers and watermen.

The first Mid-Atlantic Workshop for Disabled Individuals and Their Families in Rural and Agricultural Communities is scheduled March 4 and 5 in the Wicomico Youth and Civic Center at Salisbury, on Maryland's lower Eastern Shore.

Its main purpose is to bring together rural families with physically and mentally disabled members for specialized instruction and exchange of ideas, according to Gary L. Smith, an Extension safety specialist at the University of maryland.

Smith sees one result of the workshop being a self-help group to maintain interaction among handicapped persons in rural areas throughout the Mid-Atlantic region. He also hopes that the workshop will become an annual event, attracting more interest each year.

Such workshops already have been held under sponsorship of the Cooperative Extension Service at land-grant universities in several states west of the Ohio river. Dr. William E. Field, Extension farm safety specialist at Purdue University, has been a national leader in this area.

For this first conference of its kind in the Mid-Atlantic area, Smith said he would be pleased if 100 persons turn out. He expects about 20 commercial exhibitors with products and services which are useful to the handicapped.

General seminar topics to be covered during the march workshop in Salisbury include: "Perception of Handicapped Persons in the Rural Community;" Equipment Modifications for Handicapped Farmers and Watermen," and "Business Decision making for the Handicapped Family."

Specific areas included in the general seminar topics will involve such subjects as stress management, adapted clothing, customized farm machinery and workboats, computers for the handicapped, legislative proposals, personal attitudes and public communication.

A $35 registration fee will include four meals, plus educational materials. Vendors may set up an exhibit for $200. All registration charges and vendor fees must be paid in advance.

Brochures containing registration blanks and details on the workshop are available from county Extension offices throughout Maryland and from Extension farm safety specialists at land-grant universities in Delaware, Pennsylvania, New Jersey, West Virginia and Virginia.

Or you may contact Mr. Smith directly, as follows: Gary L. Smith, Extension agricultural engineer, Shriver Laboratory, University of Maryland, College Park, Md. 20742; phone: (301) 454-3901.

Pa. Apple production up ten percent

HARRISBURG — According to the Pennsylvania Crop and Livestock Reporting Service, Pennsylvania's commercial apple production in the commonwealth totaled 550 million pounds, up ten percent from the previous year. The value of utilized production was $47.6 million, up 12 percent from 1983.

The production of Pennsylvania pears in 1984 totaled 3,150 tons, an increase of 17 percent from the previous year's figure. The crop was valued at $1 million, up 36 percent from 1983.

Sweet cherry production totaled 900 tons in 1984, up nearly 20 percent from the previous year. The value of utilized production was recorded at $1.1 million, the same level as a year earlier.

The production of tart cherries came in at nine million pounds, up a half million pounds from 1983. The utilized production was valued at $2.4 million, down 40 percent from a year earlier

The state's 1984 peach crop was estimated at 85 million pounds, down ten percent from 1983. The value of utilized production was $16.4 million, four percent above a year earlier.

Pennsylvania's grape production totaled 60,000 tons in 1984, down four percent from last year's record high production The value of utilized production was $8 5 million, a significant decrease of nearly 20 percent from 1983

The nation's utilized production of the leading non-citrus fruit crops, excluding avocados, totaled 13.4 million tons in 1984, fractionally less than a year earlier and four percent less than 1982.

United States commercial apple production totaled 8.22 billion pounds, two percent below the previous year's crop, but one percent more than the 1982 crop. Production of sweet cherries totaled 182 thousand tons in 1984, a one percent increase from the 1983 total. Tart cherry production totaled 301 million pounds in 1984, almost double the 1983 crop.

The United States production of grapes during 1984 was 5.12 million tons, down seven percent from the 1983 production and 22 percent lower than the record high 1982 crop.

United States peach production in 1984 totaled 2.64 billion pounds, of which 2.45 billion pounds were utilized. This was 40 percent above the previous year's utilized total and 17 percent more than 1982.

Pear production decreased eight percent in 1984 to 714,000 tons.

SOYBEAN ROASTING ON YOUR FARM

DON'T WASTE IT - ROAST IT

Roast Your Barley, Wheat & Oats

Lower your feed costs by feeding your own raised grains. Roasting your grains will increase digestability and remove moisture. Flat bitter tastes will turn to sweet pleasant flavors. Feed it to Hogs, Heifers, Dairy Cows and Horses.

TV special planned for National Ag Week

CHICAGO, Il. – "American Dreams: three faces of farming," the National Agriculture Week television special, will be shown on some 135 television stations nationwide, during National Agriculture Week, March 15-21, 1985.

Each of the three farmers featured has a dream. George Stephenson, Hartselle, Ala., chose farming over the dream of playing football with the Dallas Cowboys, and tells why. Dennis Day, Grimes, Iowa, determined to be "part of the solution rather than part of the problem," turns his corn into ethanol and dreams of a more prosperous agriculture, and simultaneously, a less energy-dependent future America. Montana Governor and farmer Ted Schwinden, Wolf Point, talks about interrelationships between farm and city people, and his dream of better understanding between the two.

Through the stories of these individuals, viewers are reminded of the importance of agriculture to all Americans.

A star offensive lineman at Auburn University, George Stephenson, chose the home dairy farm over the chance to play pro football for the Dallas Cowboys. "It was my dad's dream to see my brother and I farm out here and hopefully, one day, it'd be my dream to see somebody behind me farm this land."

This segment keys on management considerations, employee motivation, and the changes coming in the dairy industry.

Dennis Day farms 1,200 acres on the outskirts of Des Moines with two sons. Back in 1979, with high oil prices and low corn prices, he began on-farm ethanol production as a means of finding a new market for his corn. It hasn't been easy, or always profitable since then, but he stuck with it, in large part because he believes that ethanol represents an answer to the farm problem.

With the EPA phase-out of lead, corn fuel could add significantly to agricultural prosperity while reducing U.S. need for foreign energy. According to the Iowa Corn Promotion Board, experts project ethanol production could utilize 500 million to one billion bushels of American corn by 1990.

Ted Schwinden, governor of Montana and a grain farmer, has a dream of better communication between farm and city people. Gov. Schwinden believes that 'unless the public understands the value of agriculture to the economy and society, elected representatives won't be convinced to develop realistic food policies."

Agriculture is a good investment for society as a whole since it creates wealth. "We're not just washing each other's laundry," he says. To stimulate understanding of this fact, he has created an "Image of Agriculture" communications project as part of the Western Governors Association. Response has been favorable with a number of diverse groups – labor, transportation, corporations, consumers – rallying to the cause.

"In the final analysis then, it's really pretty simple," Gov. Schwinden says. "We want farmers to get a fair shake so that they can be free to work the land and to keep us the best fed, the best clothed nation in the world. That's the hope that brought my parents to Montana. It is the dream that keeps me committed to the future of agriculture."

Install woodstoves properly to prevent fires

NEWARK, Del. – "Too many people are spending $500 or $600 on a woodstove and then taking shortcuts on installation," warns University of Delaware extension safety specialist Ron Jester. Such shortcuts are responsible for three out of every four woodstove-related fires. Yet these fires are among the easiest to prevent.

When installing a woodburning stove, Jester recommends that homeowners make sure floor and wall protectors, connector pipes and chimneys meet safety specifications.

The main purpose of a floor protector is to shield the floor from radiant heat, hot coals and sparks. The National Fire Protection Association recommends using closely spaced solid masonry units not less than two inches thick, covered with sheet metal of not less than 24 gauge for a stove with legs not less than six inches long. The floor protector should extend at least 18 inches beyond the stove on all sides.

"Many popular materials used for stove boards, such as real or artificial brick, stone and slate, may be inadequate by themselves," Jester warns, "because they provide little protection from radiant heat." Underwriters' Laboratories and other testing organizations now test and list stoveboards.

With wall protectors, the idea is to cool, not simply to cover, the wall. Without protection, a woodstove must be located 36 inches from any combustible material unless the instructions for its installation specify otherwise. A wall protector may be used to reduce this distance.

All effective wall protectors provide a ventilated air space between the protector and the combustible. Based on the 1984 NFPA code, the maximum reduction in clearance is 66 percent for a three-and-one-half-inch thick masonry wall with ventilated air space. So if the required clearance with no protection is 36 inches, with the ventilated masonry wall you can reduce the clearance to 12 inches.

"Keep in mind that any point within 36 inches of the stove should be protected," Jester says. "As with floor protectors, common materials like brick and other decorative finishes may be inadequate for reduced clearances." Buying a circulating woodstove or a unit with a heat shield are alternatives to installing a wall protector.

The connector pipe is another safety factor that's often overlooked when people install a woodburning stove. The following minimum gauges are required: 24 gauge for sizes six to 10 inches; 22 gauge for sizes 10 to 16 inches.

Jester says connector pipes should be firmly attached with screws. Keep them as short as possible, with as few elbows as possible. Be sure to allow at least 18 inches between pipes and combustibles. Reduce clearances for connectors by the same ratio used for wall protectors.

Safe clearances and construction requirements for masonry chimneys are spelled out in NFPA code 211. Chimneys should also be designed to sustain a draft of approximately .06 inches of water.

"For UL approved factory-built chimneys, it is imperative to follow installation instructions exactly," the safety specialist warns. "Chimneys are vents for the products of combustion. They are not meant to be combustion chambers. They can't be exposed to repeated chimney fires--particularly intense ones–without serious repercussions."

FEATURING THE FILM
"THE PERFORMANCE DIFFERENCE"

You're invited to see a special presentation called "The Performance Difference." It's a new film featuring the newest line-up of several White Farm tractors and implements. You'll see how White Farm models are designed to help you achieve top productivity–year after year.

So come join us...We're celebrating another year of farmer service...And want to show you our equipment, our dealership and our dedication to agriculture. Whether you need equipment for the field or feedlot, White Farm has the just tools for you. Come to our open house and see the White Farm Difference for yourself.

Farm Talk

by

Jerry Webb

The warning has been sounded and now the struggle begins to do something about the millions of tons of soil that are lost each year in this country. It's a bit frightening when you think about the magnitude of the loss and the thin layer of topsoil that covers this country. Really, only a few inches of productive land is all we have between abundance and starvation. And we're losing it at an annual rate of 5.5 billion tons of soil. That may not mean much, but a Department of Agriculture expert has figured it out as enough soil to cover the state of Iowa with a layer an inch thick. And that's an annual loss. How many years can such abuse continue?

It apparently took millions of years without tillage to develop our rich productive agricultural soil. And in no more than a couple of centuries we have seriously threatened the very basis of agriculture.

Maybe it will take another Dust Bowl to turn this country around and head it toward the conservation mindedness necessary to turn the tide. As the stories go, back in the thirties a combination of improper farming practices and dry weather created the great dust storm that actually darkened the skies over the nation's capital. Then things started to happen. It didn't take many days to produce a whole raft of legislation aimed at doing something about soil conservation.

And so for 30 or 40 years, there was a great national consciousness among farmers that soil should be preserved. Then came the opportunity for agricultural exports and the plug was pulled and farmers started plowing land that should never have been tilled. And since then we've had some dry years that have left millions of acres barren and susceptible to wind and water erosion.

Conservationists point out that the stake in protecting farm topsoils has risen sharply. With so many more people to feed, failure to better protect our topsoil eventually could mean hunger for millions. "Soils being taken by erosion generally are the richest in nutrients and organic matter and have the most favorable conditions for plant growth," according to Norman Berg, chief of USDA's Soil Conservation Service. He says this constitutes a significant drain on the productive potential of land where our food is produced. Berg compares soil losses to bags of money floating down the nation's rivers. He estimates that putting all of the lost nitrogen and phosphorus and one-four of the lost potassium back into the damaged land would add up to 18 billion dollars in just one year.

At today's erosion rate, Berg says food supplies will be seriously threatened in about 100 years. In Iowa, as one example, half of the original topsoil of six-to-eight inches already has been lost from sloping, unprotected land during the century that state has been farmed. Estimates are equally grim for many other states.

So what can farmers do to turn this soil conservation problem around? They already have the know-how and the technical support required. It's really just a matter of priorities. Is soil conservation more important than extra profits? Is it worth giving up some current income in exchange for future potential? Does it really matter that some other generation may run out of soil as long as this one is well kept?

It seems to me a heavy burden to place on farmers to ask them to save teh nation's soil for future mankind all by themselves. If farmers have an obligation to be stewards of the soil, then surely the rest of us, through our tax dollars and our many governmental agencies, have an obligation to help pay the bill. And that has nothing to do with government handouts or special treatment or anything else that smacks of favoritism.

Our land tenure system allows farmers to own their land, but it really makes no provision for its continued preservation. In the early days of this country, farmers would till the soil until it was "worn out" and then just move on. And that was what helped settle this great nation. But then we figured out how to save those worn-out farms and get them back into production. And now it appears we are losing our grip once again.

So in addition to some national awareness, it seems to me there is a need to help farmers financially in this battle to save the soil. Because if this generation of farmers, or perhaps the next generation, doesn't care enough to make the necessary effort, there may not be any soil for the generations that follow.

In many ways farming is a business just like any other business. But in another very special way, it is unique. A factory can be built, remodeled, torn down and re-assembled, burned down or blown up. But the land it occupies is always there. It's just a piece of space where that enterprise exists.

But farming requires the use of that land in a special way. How that soil is handled determines its very future and it is, after all, essentially a non-renewable resource. It can't be remodeled or rebuilt, or even relocated. It can be preserved and slowly improved, and it can be lost. It never really disappears, it just moves away – muddying our streams, choking our rivers and dirtying our air.

Soil erosion is truly a national concern that goes way beyond the farm gate, beyond partisan politics, and beyond economic considerations. Saving this nation's soil is in the public interest and it is of the highest priority. Let's hope we haven't waited too long to do something really substantial about it.

Order 2 milk call set at 7% for February

NEW YORK – Market Administrator Thomas A. Wilson invoked the call provision under the New York-New Jersey Milk Marketing Orders at the seven percent level for February 1985. Activating this provision, Section 1002.27 (g), became necessary to insure that handlers regulated under the Orders will supply sufficient quantities of bulk farm milk for the Class I-A fluid market. Class I-A milk is milk sold in federal milk orders as fluid milk products such as homogenized, flavored, low test and skim milk.

Mr. Wilson stated that all Order No. 2 handlers in February will be required to have at least seven percent Class I-A utilization for designated pool plants and units. Any such plant or unit that does not meet this percentage will have its designation or pool status cancelled or suspended. The required seven percent can be met by a handler who is not currently shipping to bottling plants if he does so at the rate of ten percent of producer receipts for the balance of the month.

This announcement follows a public meeting held on February 1, 1985 in Syracuse, New York, at which industry comments were heard. A determination of the desirable utilization percentage for the months of March and April 1985 was not announced at this time.

LIQUID FERTILIZER

Announcing 2 New Products!

Gro-Mor LIQUID-CAL
(Liquid Calcium)

Gro-Mor LIQUID-SUL
(Thio-Sulfate)

Liquid-Cal can be used with liquid nitrogen which will help maintain your Ph in the top layer of soil when applying liquid nitrogen.

Liquid-Sul is very important in helping to make protein in your crops. Sulphur in the East is becoming very low in the soil. Many farmers who now are using Liquid-Sul have found higher proteins in many of their crops. Every farmer should be checking his sulphur levels in his soil especially if he is feeding his crops to his cattle.

AVAILABLE IN BULK and 5-GAL. PAILS

★ If you are considering or are now using a liquid calcium or a liquid sulphur product... call or write for complete information!

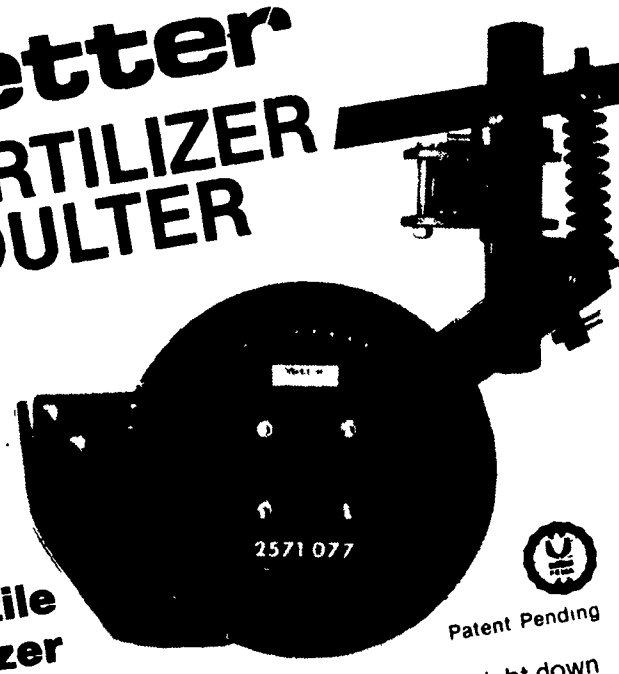
Yetter
FERTILIZER COULTER



Versatile Fertilizer Placement

Patent Pending

The new Yetter Fertilizer Coulter lets you put fertilizer right down beneath the trash and place it accurately alongside the seed bed at the depth you prefer for maximum utilization. You'll also like the way Yetter's new coulter cuts a clean, wedge-shaped slot and doesn't disturb the soil like conventional double disc openers. Unlike many units, the Yetter coulter is fully adjustable and you can use it just as efficiently for no-till, mini-till and conventional tillage. The versatile bracket makes mounting on your planter quick and easy. Don't wait . . . see your Yetter dealer today or phone us direct. Yetter Manufacturing Co., Colchester, IL 62326-0358. Toll free 800/447-5777. In Illinois 309/776-4111 collect.

Dairy Council, Inc., offers osteoporosis slide program

SOUTHAMPTON — Are you a likely candidate for osteoporosis? You are, if you: are a female Caucasian, of northern European descent, with early menopause or post-menopausal, with a family history of the disease, do not exercise regularly, and do not get enough calcium-rich foods.

Osteoporosis, sometimes called the "brittle-bone" disease, is nothing new–but it's only in the past few years that this problem has received the attention it deserves. It is a serious, often debilitating disease that affects some 15 million Americans, most of them women. In fact, one in four white women over age 65 may have the disease–but it can affect everyone.

Osteoporosis actually begins early in life. It isn't easy to convince a teenage girl or young woman that she should be concerned about bone loss in later years, and should consume calcium-rich foods. Federal statistics indicate that calcium consumption begins to drop off for females at age 11. For many women, this low calcium intake continues throughout life.

The disease has been recognized as the most common metabolic bone disease. Some statistics: approximately 75 percent of all hip fractures are due to this disease; one in four women past menopause exhibit some symptom of osteoporosis; by age 80, total bone mass can be reduced to half of what it was at age 40.

Is there any good news about osteoporosis? Though there is no cure, it can often be prevented or its progress slowed through diet and lifestyle changes.

Dairy Council Inc., of Southampton, PA, a nutrition education organization, would like to tell women how this can be done.

An informative 15-minute slide program, "Osteoporosis and YOU" has been develped as an educational service for women's groups and organizations. The program takes a close look at bone disease; how it develops, who's at risk, and how it can be prevented.

Women's groups who will find the program of special interest include: civic and church groups, social, professional, educational, and philanthropic organizations.

The program is available through the joint efforts of National Dairy Council, its affiliated units, and the National Dairy Board. Local Dairy Council nutrition professionals can provide this important health message for your group as a public service.

No one has conclusively proven there is a cure for this debilitating disease which causes, among other things, "dowager's hump", but it can be prevented and even arrested. To find out how, contact Dairy Council at 355 N. 21st Street, Suite 203, Camp Hill, PA

Penna. declared free of bovine tuberculosis

WASHINGTON — The U S Department of Agriculture has recognied Pennsylvania as the 27th state to eradicate bovine tuberculosis.

Bert W. Hawkins, administrator of USDA's Animal and Plant Health Inspection Service, presented a TB-free certificate to Pennsylvania's Secretary of Agriculture Penrose Hallowell on Jan. 14 during Farm show in Harrisburg.

"In 12 years, Pennsylvania has had only 11 infected herds, with the last having been diagnosed in January 1979," said Hawkins.

"In earlier days, however, Pennsylvania had high infection levels in dairy herds," he said. "From 1917 to 1984, the state conducted 33.3 million tuberculin tests on 2 4 million lots of cattle, disclosing nearly 342,000 reactors.

"This makes Pennsylvania's achievement all the more impressive," said Hawkins

To qualify for TB-free, a state must remain free of infection for at least five years In addition, it must conduct a strong surveillance program and enforce livestock dealer and animal indentification laws that allow tracing infection to source herds.

In addition to Pennsylvania, bovine TB also has been eradicated in Arizona, Colorado, Connecticut, Delaware, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, Nebraska, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Oklahoma, Rhode Island, South Carolina, South Dakota, Utah, Vermont, Wyoming, and the U.S. Virgin Islands.

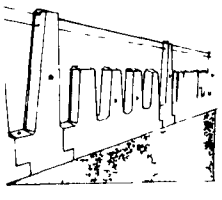
SUPER BOWL E-80
Built To Last

- Reinforced Precast Concrete
- No More Rust
- No More Corrosion

A full 1" of high density styrofoam insulation coated with a reflective foil gives you the most efficient use of energy needed. A high capacity ¾" valve gives quick recovery. This plastic valve resists corrosion and is very easily serviced without the use of tools. The adjustable thermostat and element are located beneath the bowl. This effectively reduces the possibility of "stray voltage." This method of "heating through the bowl" is especially well adapted to precast concrete. Concrete itself is a good conductor of heat and at the same time is a poor conductor of electricity Our concrete bowl, because of its mass will retain heat for a longer period of time. This effectively reduces the frequency of use of the heating element and thermostat, and maintains a very uniform water temperature.



WAT-CHA FEEDING SYSTEM

11 SWINE

The ADVANCED GENETICS Concept

- Put together the highest quality Swine Genetics available in an **Accredited SPF Health Package**
- **Back it up** with the most rigorous **Performance Testing Program** available including feed efficiency records
- **Maintain** that package in a **closed herd** by utilizing Embryo transfers and Piglets from closed C-Sections
- Provide a **Service Program** that can be tailored to meet the needs of individual operations

Designed to meet the needs of our own commercial operations, we now offer these Genetic concepts and services to the Swine Industry.

E-Z DUMPER®

DIRECT FROM FACTORY **$1,045**

DUMP UNIT FOR PICKUP TRUCKS SAVE TIME....LABOR....MONEY

The E-Z DUMPER is hydraulically operated and is powered by the 12 volt truck battery. The safe removable key switch is standard equipment. The dump angle of 47° assures quick and clean unloading. The removable tailgate can be opened from the top or bottom for easy flow control.

Designed for do-it-yourself installation - the E-Z DUMPER comes ready to install, including hydraulic fluid. Most pickup trucks require no alterations. Just slide the E-Z DUMPER and secure with clamps using existing bolts and holes. Installation is fast and simple. Dump over 4,000 lb. of firewood, gravel, topsoil, coal, corn, mulch, etc. in seconds.

MMI calls for deletion of July 1 price cut

STRONGSVILLE, Ohio – Area dairy producers of Milk Marketing Inc. (MMI), a regional dairy marketing cooperative, are urging U. S. Secretary of Agriculture not to initiate the proposed July 1 reduction in the dairy support price. MMI General Manager Gordon Riehl said that the price support cut would only serve to further hurt already financially stressed dairy farmers.

The Dairy Stabilization Act of 1983 gave Secretary John Block authority to cut dairy price supports in order to reduce the milk surplus, and to curtail government costs for the support program. The secretary has the discretion to cut the price support by 50 cents for each 100 pounds of milk produced by American dairy farmers.

The first price cut is scheduled for April 1. If additional reductions in milk surpluses are not realized, a second price cut could be called on July 1. It is this second price support cut that MMI is urging not to be implemented.

"Dairy farmers were supposed to cut production and we are close to meeting our goal. But if the second cut follows so closely on the heels of the April 1 reduction and it adequate time has not passed to measure the effect of this first cut, farmers will once again be hit hard by the system designed to protect American agriculture and the American consumer," said Riehl.

Riehl is asking for support of national legislation introduced by Vermont Congressman Jim Jeffords calling for a mandatory 90-day delay for the price cut. He believes this 90-day extgension will allow more time to determine an adequate evaluation of market adjustments and trends.

"We will not only have more time to review our markets, but by October first dairy producers should be working under the guidelines established by the 1985 Farm Bill which Congress is now working on. There is no sense in calling for price cuts on July 1 when another program will be effective 90 days later," said Riehl.

In 1983 140 billion pounds of milk (estimated) were produced nationwide by U.S. dairy farmer. The Dairy Stabilization Act helped reduce production by nearly four billion pounds below 1983 levels.

MMI is a 8,500 member dairy farmer owned coopertive encompassing an eight state midwestern area including Ohio, Indiana, Pennsylvania, Michigan, New York, Kentucky, Maryland and West Virginia. Last year MMI marketed more than 4.6 billion pounds or 547 million gallons of milk.

Soybean project to increase demand for U.S. product

ST.LOUIS, Mo. – The American Soybean Association has announced its participation in an export trade expansion program funded by a major agricultural chemical company. The program will provide funds to develop a new soybean product that will meet the taste and dietary requirements of the people of India. The long range objective of the program is to increase demand for U.S. soybeans and soybean products.

The Soybean Association project will be financed with funds generated through an agricultural market development program sponsored by Velsicol Chemical Corp., a Chicago-based herbicide company. Farmers purchasing Velsicol herbicides will designate one or more commodity organizations to receive 50 cents per gallon of herbicide purchased.

The market support program, called "V.O.T.E." (Velsicol's Operation Trade Expansion), is expected to generate up to half a million dollars for programs conducted by the six commodity organizations. The other groups participating are: Cotton, Inc.; National Association of Wheat Growers; National Corn Growers Association; National Pork Producers Council and the National Cattlemen's Association. Velsicol officials emphasize that a group's participation in the program does not constitute a product endorsement.

Farmers who purchase Velsicol herbicide between now and September 1985 will be able to "vote" for one or more commodity organizations, says ASA President Roger Asendorf, a farmer from St. James, Minnesota.

Ballots are available from participating agricultural chemical dealers and distributors. All Velsicol ag herbicides (Banvel, Banvel II, Weedmaster, MonDak and Carbyne) are included in the program.

Velsicol will donate 50 cents per gallon to ASA, based on each herbicide purchase, to the organization(s) specified by the purchaser.

"If large numbers of farmers recognize the need for programs which will expand markets for our soybean products, we can make a significant effort to increase soybean demand," said Asendorf. "This is an excellent opportunity for farmers to take action to increase our markets for soybeans, and it doesn't cost the farmer a penny–all it takes is a few minutes to fill out the simple ballot."

Dale Miller, marketing and sales director for Chicago-based Velsicol, said his company undertook the unique program in 1984 in order to help expand markets for U.S. agricultural products. He pointed out that there was no limit on "V.O.T.E." dollars and that the contributions could exceed many hundreds of thousands of dollars.

New IRS rules on property transfers between spouses

WASHINGTON – The Tax Reform Act of 1984 provides that gain is not taxed and loss is not deductible when property is transferred between spouses. The same rules apply for transfers between persons who formerly were married if the property transfer is part of a divorce decree. In addition, investment credit is not recaptured when transfer involves spouses or former spouses who are being divorced.

The new law overrules an earlier precedent (established in the Davis case) in which a court determined that gain or loss must be recognized and investment credit recaptured when property was transferred between spouses or former spouses. The change affects transfers occurring after July 18, 1984.

Basis (or value of an asset) is carried over under terms of the new legislation. Thus, basis in the hands of the transferee spouse will equal basis in the hands of the transferor spouse. This basis carryover rule applies to transfers for cash, in exchange for other property, and for transfers related to divorce.

While transfer between spouses will not involve gain, loss or recapture of investment credit, these rules do not apply if the property is subsequently sold to a third party. In the case of sale subsequent to receiving property from a spouse, gain or less is recognized and investment credit may be recaptured. In this case, the gain or loss is computed using the carried over basis of the property; i.e., the basis in the hands of the original owner. Investment credit is recaptured based on the date of purchased by the original owner and the amount of credit claimed.

If property was depreciated by the spouse who originally owned it and is then sold at a gain by the transferee spouse, a recapture of gain to the extent of depreciation will occur. In this case, gain is calculated by comparing sale price received by the transferee spouse to the basis of the property in the hands of the transferor spouse.

This means the transferee spouse must report gain resulting from depreciation even though this individual did not claim depreciation. The situation occurs because the new rules require that basis, depreciation and investment credit are carried over from the transferor to the transferee spouse.

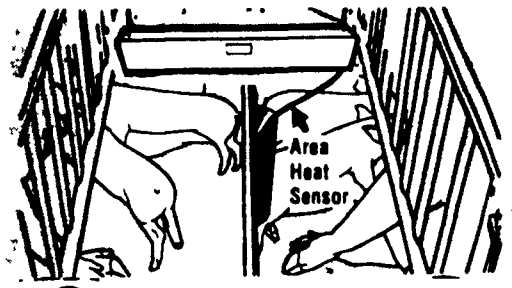
Temperature Controlled
INFRARED HEATERS



"The Brooder With A Brain"
it thinks for itself

NO OVERHEATING – NO CHILLING: A solid-state control and sensor act better than a brooder thermostat to automatically regulate radiant heat output to within ±½° of setting.

SAVE PIGS – REDUCE PILING: Pigs spread out comfortably under blanket of infrared heat.

SAVE ENERGY, TIME, LABOR: Downgoing infrared heats pigs, not the air. Set automatic control and forget it; sensor allows constant temperature below heater. Controlled infrared is the most economical form of clean electric heat. No moisture or carbon monoxide produced as with gas heaters!

VARIOUS MODELS: Choose individually controlled heaters or a centrally controlled system, automatic or manual regulation. Kalglo heaters have durable metal sheath heat elements (no glass tubes to break) and come ready to plug in and use. Larger models also available for nursery and finishing pens.

Brockett's Ag Advice

By John E. Brockett

Farm Management Agent

Lewistown Extension Office

Every farmer who seriously desires to be successful in his or her chosen business must use a good farm business analysis as a management tool. There are several important points to consider when doing a farm analysis.

- The better the input information the more accurate the analysis.
- You can do a partial analysis of your business without inventories with the exception of unpaid bills. They are a must for any analysis.
- An inventory of your working assets, sale or input items, and unpaid bills will give you a better look at your total business.
- Those who wait to do an analysis until they have everything perfect will never do an analysis. Thus they will miss out on the help that even a partial analysis could give to them.
- Understanding the key points in the analysis is vital if you are going to make good use of it.
- Whoever does your analysis or helps you with the analysis can usually explain the results if you can handle it.

There are a number of analysis systems available. Most use your records and recollection. They all can be of help to you if the results are used.

Enterprise Analysis

I am personally prejudiced towards an enterprise analysis. I want to know which enterprise is profitable and which is a loser. If an area is not profitable, I want to know why.

An enterprise analysis treats each enterprise as a separate business. Crops used by livestock are sold to the livestock enterprise at market price Common expenses such as labor or taxes must be allocated among enterprises. Each enterprise will have its own cash and accrual profit and loss statement. In addition, efficiency factors (milk sold per lb. of grain fed, for example) are calculated for the major enterprises.

It requires an inventory, report of liabilities and assets, yields, prices of inter farm transfer items, as well as income and expenses. You must allocate expenses.

Whole Farm Analysis

The one usually used is a total farm analysis. It provides much of the same information as the enterprise analysis with the exception of a profit or loss statement for individual enterprises. It requires all of the inputs that are required by an enterprise analysis except for allocating expenses.

Mini or Partial Analysis

A limited-use tool, the mini analysis can help a farmer answer a number of questions (for instance, whether increased production improve income). It does not require an inventory or a balance sheet so it does not provide the user with an accrual profit and loss statement.

I have both an enterprise and a mini analysis on a ViscCalc template usuable on an Apple II computer. Some of the county agents in the state have the enterprise analysis. Most of them have the mini analysis program with projections of what would happen if you increased production, improved hay quality, improved feed efficiency, reduced the herd, or enlarged it.

New York ag acreage down, production up

ITHACA,NY – Commercial farm operations in New York State have decreased in number dramatically during the last three decades. For the foreseeable future, though, they will remain family enterprises rather than corporate entities. Despite fewer farms, food production will increase

Cornell University agricultural economist Bernard F. Stanton made these observations in a talk at the recent annual meeting of the New York State Agricultural Society in Syracuse. Stanton is a professor in the New York State College of Agriculture and Life Sciences at Cornell.

Statistics graphically illustrate important changes. Since 1950, there has been a drop from 125,000 farms to 50,000 in New York State. Farm numbers, however, declined very little in the last ten years.

Where have the farms gone? To larger and larger farm operations, in part, Stanton pointed out.

"My forecast is that one hundred years from now we will have fewer commercial farms (in New York) than today, perhaps as few as 5,000. Instead of one-third of the state's total land area in farms, it may shrink to one-quarter.

"Although we will have fewer farmers and less land in production in the future, the milk production per cow and the crop yield per man and per acre will continue to rise. So, overall, we will see increases in food production," Stanton said.

Much of the reason why fewer farmers produce more food is that new technology has enabled one man to do more than he did in preceding years, Stanton pointed out. New technologies increase the amount of capital necessary to sustain a farming operation, while decreasing the amount of labor.

"In the last 50 years," Stanton said, "the price of capital relative to labor has fallen. But in the last five years, the real price of capital relative to labor has increased."

What does Stanton – himself reared on a farm – think about these trends?

"I wonder what the cost to society may be as more and more of the nation becomes urban-and suburban-reared. Once the nation's most important farm state from 1830 to 1860, New York today is a ready example of an industrialized, urban place to live. Commercial farming now employs less than one percent of the State's labor force," he said.

Bucks-Montgomery no-till conference announced

NORRISTOWN — The Bucks and Montgomery Conservation Districts will hold a no-till conference on March 6th in Creamery, Pa. The meeting will begin at 8:30 a.m. and all farmers and landowners are invited to attend.

The meetings are being held jointly with the Cooperative Extension Service, Soil Conservation Service, the Agricultural Stabilization and Conservation Service of the two counties.

Lunch reservations are necessary. For information Bucks County residents should call Steve Hill, 348-1166. In Montgomery County call Bill Steuteville, 489-4506.

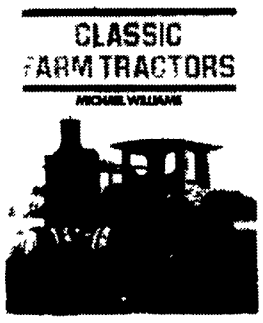
"CLASSIC TRACTOR BOOKS" WINTER SALE



NEW! "CLASSIC FARM TRACTORS" by Michael Williams
CLASSIC FARM TRACTORS describes some of the successes and some of the failures which are part of the history of tractor development. More than 60 — Different makes of Tractors are described in detail. Pioneer, Case, Avery, Rumely, Eagle, Oliver, International, John Deere, Hart-Parr, Allis Chalmers, Caterpillar, Happy Farmer, Sawyer Massey, Twin City, Ferguson, Canadian etc. Magnificent collection of 105 Black & White Photographs. Also 31 — large Photos in full Color. Many of the photographs are old and are from archives and private collections. Some are taken at the Manitoba Agricultural Museum in Canada. This book contains something of interest to anyone who likes old tractors. Has Nebraska Tractor Tests. 145 large pages Quality **HARDCOVER $17.95**

GREAT TRACTORS by Michael Williams This book describes in words and pictures some of the classic tractors which were milestones in farming. The selection includes famous and commercially successful makes that brought important new developments into farm mechanization, along with some tractors that progressed no further than the prototype stage. You'll also find interesting information on the 90-year development of the farm tractor, beginning with the first heavyweights that powered the threshing machines on the wheatlands, to the present day tractors. Magnificent collection of Color and black and white photographs. 160 large pages. 140 — Photographs (30— in full color). **HARDCOVER $18.95.**

SPECIAL! Both Above Collectors Volumes $36.90 VALUE FOR $29.95 POSTPAID, SAVE $6.95.

A.B.C. GROFF Introduces The MILLER-PRO FORAGE BOX LINE...

THE HEAVY-DUTY ALTERNATIVE

You Are Invited To Attend This Event!

WHERE: At Our Store
WHEN: Wednesday, February 20th
10:00 A.M.

LUNCH WILL BE SERVED

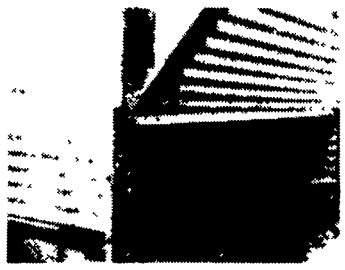
Factory Representatives Will Be On Hand To Present A Short, Informative Program About These Forage Boxes Designed For Professional Farmers

Find Out Why Farmers From Across The Country Are Talking About And Buying These Boxes

CHECK THESE OUTSTANDING FEATURES:

CROP CLEAR ROOF

The crop clear roof is constructed of heavy 20 ga aluminized corrugated steel eliminating need for roof rafters which can interfere with loading of crop



REAR ACCESS DOOR

The door encloses heavy duty 6 tooth idler sprockets, 1¼" solid steel shafts and cast tightener brackets

This door eliminates clumsy shields and provides for easy maintenance

The rear slant panel is to re enforce the rear of box and to help control tipping of crops at the end of unloading

UNDERSTRUCTURE

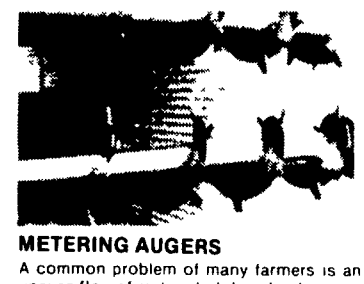
The under structure of the PRO is constructed of kiln-dried, pressure treated ground contact (40) high quality wood Not just a dipped surface treatment

Full length main stringers consist of triple 2x8's bolted together (double 2x8's on Model 2150) for a laminated effect This cross grain lamination eliminates weak support points common in single 4x8's with thru knots

AN OUTFEED THAT DELIVERS!

A high capacity 22 wide 12 extended out let heavy duty (CA 550) roller chain and cast block tightener bearing assure smooth even flow of material to blower The CA 550 chain has the same strength as 662 pintle but with less stretching and sprocket wear

Spillage is minimized because of lowered outfeed pan close fit main apron floor plate return pan and windguard Optional 30 fold up extension



METERING AUGERS

A common problem of many farmers is an uneven flow of material while unloading

Small diameter tine style beaters used by most manufacturers undercut material while unloading causing bunching and uneven feeding The PRO features large diameter 18 drum style metering augers for smooth aggressive non wrap unloading

Angle and set back of augers combined with progressive auger speed eliminates overthrow making a fourth auger or spill guard unnecessary

WARRANTY: The MILLER PRO, designed to be durable, has the longest warranty in the industry. One year parts and service on entire box with second year on parts, and a lifetime warranty on the steel sides and pressure-treated wood material.

MILLER PRO OWNERS SPEAK OUT

"The 'Pro' is the smoothest box I've ever seen. We filled a 25x80 and 30 feet in a second 25x80, and never blocked the blower with a 70 H.P. blower tractor! We kept up to the chopper with just 2 boxes!!

Robert C. Sperber
7345 Sand Bay Rd.
Sturgeon Bay, WI
2-Miller 'Pro' 2200

"The torque team drive permits loading material right on to the metering augers with no shearing. This is impossible on other boxes without expecting trouble."

Patrick Shadrie
Route 1
Black Creek, WI
2-Miller 'Pro' 2175

"With 2 - 'Pro' 20' boxes we can chop faster than the two 14' and one 16' boxes we owned previously."

Eugene Kringle
Route 2
Cameron, WI
2-Miller 'Pro' 2200

"The 'Pro' is very smooth running and it unloads a lot evener than other boxes with no spillage."

Spruce Shade Farms
Ron Nagel (pictured)
Route 1
Valders, WI
2-Miller 'Pro' 2175

"The Miller 'Pro' is the Cadillac of boxes for a Chevy price."

Ed Ranney

Shift on the Go!

Yanmar brings big tractor features down to size with Powershift and Live PTO in compact tractors
Powershift means clutchless on-the-go shifting to keep you going where others bog down
2-Speed Live PTO keeps implements working at full power even when tractor is stopped
Plus more standard features and Yanmar's dependable 3-cylinder diesel engine

You Can Use a Yanmar!

WET LIME SPREADER

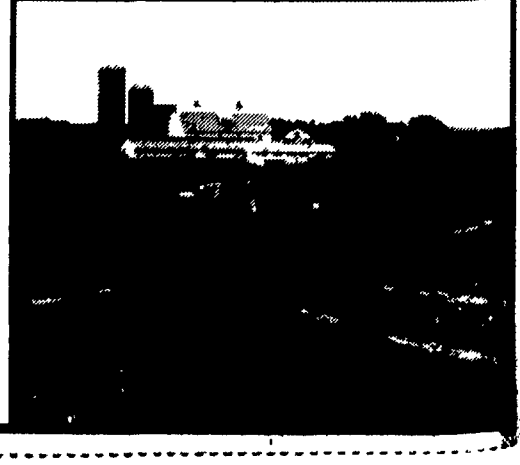
Some farmers are saving as much as $16 per ton spreading their own lime!

- Spread it when you want it spread
- Rugged construction, built to last
- Great for fertilizer, poultry waste and similar material
- Truck mounted in 9' to 14' lengths
- Tractor drawn in 2, 5, or 8 ton models

SOWER SPREADER

With today's prices you can't afford to waste fertilizer.

- Accurate, even spreading, as much as you want right where you want it.
- Designed for all types of dry, free-flowing materials such as dry lime, rock phosphate and fertilizer.
- Truck mounted or tractor drawn



Buy direct from the factory for the best price!

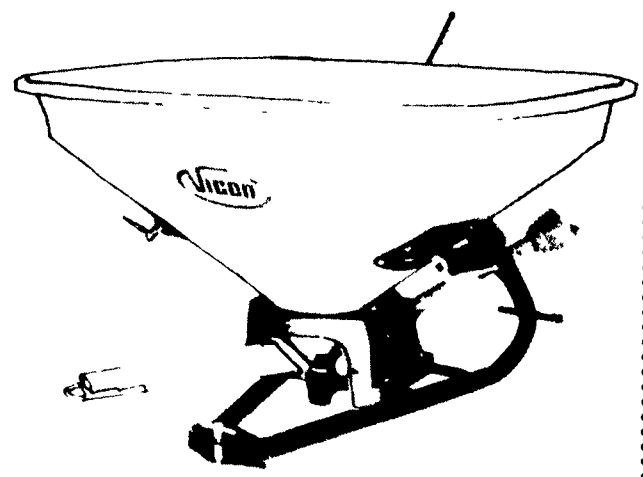
Vicon Winter Special On SEEDER/SPREADERS Vicon

the New Dimension in seeding/spreading

Over the past two decades Vicon pendulum action seeders/spreaders have become an integral part of the farming scene Now Vicon Vari-spreaders are entering a New Dimension a completely new range of spreaders featuring a characteristic new design and incorporating the latest technology to give the accuracy and reliability demanded by todays profit conscious farmer Pendulum action gives the advantage of accuracy on sloping ground as well as on the flat coupled with the ability to spread all types of solid fertilizer chemicals, seeds, powders and lime

The six models in the new range offer capacities to suit the needs of every farm size A special feature of the New Dimension spreaders is an easily adjustable flywheel which changes the effective spreading widths from 20-45 feet



a sound investment for profitability

2900 Gal. Tank w/Easy Loader

NOW (Patent Pending)

You can haul liquid Manure all day without getting off the Tractor Seat using the SLURRY BUGGY Easy Loader

1) Back up to pit or lagoon. Lower easy loader (boom) from tractor (by hydraulic)
2.) Engage PTO Switch pump to vacuum
3.) Float level indicator shows when tank is full
4.) Stop PTO Raise boom and head for the field
5.) In field. Switch pump to pressure. Start PTO Open Valve and unload

A liquid manure spreader that loads and unloads and has no chains, bearings, fans, augers, or moving parts that touch manure.

For more information call or write.

TORQUE AMPLIFIERS, ETC.

Serving Customers in 20 States Coast to Coast.

Complete TA assemblies for 706-1586 are priced at $595 and come with a Dana Co Heavy Duty Sprag instead of the usual IH sprag. **The Dana sprag is guaranteed for 2 years against failure.** Sprag kits (includes sprag gear, Dana sprag, and piston carrier) and all items for rebuilding your own TA are available to qualified persons Ramps and carriers for the older style TA's (as in SMTA, 340, 560) are priced at $150 each and carry a 90 day guarantee. We have all the parts needed to rebuild your TA in stock at prices that will save you money We also have a shop available for complete TA installation. Or, you may split your own tractor and bring the center housing to us, which we can rebuild while you wait (approx 4-6 hrs) We also stock New and Rebuilt Water Pumps, Dynlife Clutches, Pressure Plates, and PTO Drive Gears, (Spline-fit into pressure plates) for most IH tractors and combines

— QUALITY USED PARTS —

We buy and sell used parts and parts tractors We have a good selection of quality used parts at competitive prices Please have part no when calling, if possible

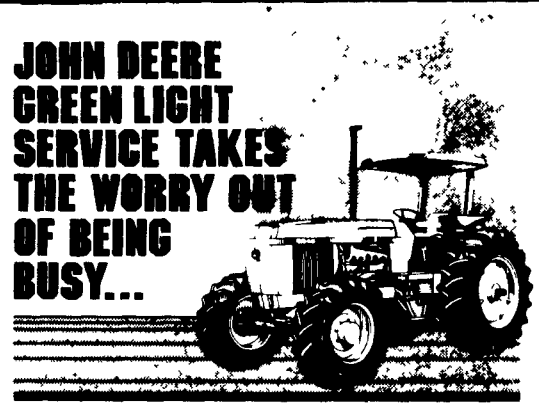
JOHN DEERE GREEN LIGHT SERVICE TAKES THE WORRY OUT OF BEING BUSY...



Especially when the weather doesn't cooperate. That's when the season seems shorter, you get busier and equipment downtime costs more.

But when you take advantage of our Green Light Service, especially the off-season specials like the one we're having right now, you can roll into the field and not worry so much about unexpected downtime. Because we will have inspected for the unexpected. And troubleshooting in the shop is a whole lot more affordable than finding trouble in the field. Especially when you're busy.

So call us today and check out our Green Light Service Specials. Then you won't have to worry about it later when things get busy.

Get Master Mix... and more to boot!
Ask your participating Master Mix Dealer how you can earn both a free pair of high quality Wolverine® boots and free Potency Formulated starter feed.

Stop In At The KEYSTONE PORK CONGRESS

Thurs., Feb. 21st

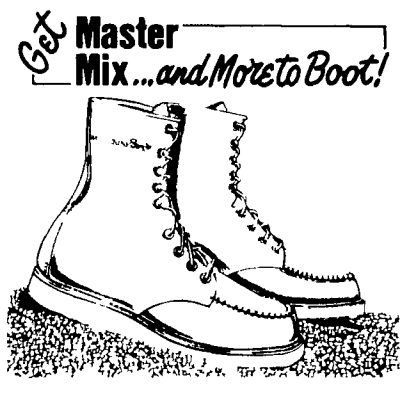
Talk To Our Reps About This Exciting Concept In Swine Feeding

Master Mix is anxious to show you how improved feed conversion and increased average daily gain can help you produce more pork per ton of feed and get lower fixed costs per pound of pork marketed.

We can help you generate more profit with your hog operation with our new line of high performance Potency Formulated feeds developed by Master Mix Research Potency Formulated feeds are available for all phases of pork production and supply the highest levels of useable amino acids and energy to give you top performance and profits in your operation.

See your Master Mix Dealer today for more information about Potency Formulated feeds and learn how you can win the profit struggle.

Master Mix® CENTRAL SOYA



From February 1 through April 30, 1985, your participating Master Mix dealer has an offer you won't want to miss. You can earn both **free** Potency Formulated started feeds and a **free** pair of high quality Woverine® work boots.

Here's how...
For every half ton of Potency Formulated Premawean or Premapig starter feeds you purchase, we'll give you another 50 pounds free. That's right, buy 1,000 pounds and you get 50 pounds to boot!

But that's not all...
While you're buying Potency Formulated starter feeds you'll also be earning Master Mix "Boot Bucks." And when you've got $75 worth of Boot Bucks, you can walk away with a free pair of high quality Wolverine work boots.

Livestock Ledger

By

Chester D. Hughes

Extension Livestock Specialist

Our last discussion made us aware of USDA's Residue Avoidance Program which cooperates with producer associations, trade groups and veterinarians. Pork producers and the government have a history of working together to successfully solve problems. In 1977, more than 13 percent of slaughtered hogs had violative residues of sulfonamides (which are commonly called sulfas). The nationwide problem created pressures to ban the use of sulfas in feed.

Through cooperative effort, USDA and industry found out how easily sulfamethazin can contaminate withdrawal feed. For example, if as little as 20 pounds of medicated feed is in the boot of a bin when a producer mixes withdrawal feed, it can pick up enough sulfa to cause violative residues in hogs. With concentrated sulfamethazin, just ¼ of an ounce can contaminate a ton of withdrawal feed and the hogs that consume it.

A national sulfa campaign spread the news on how feed can become contaminated and how farmers can keep their animals free of sulfa residues. Producers and their suppliers learned how to keep withdrawal feed clean, at the mill and on the farm. Producers and feed manufacturers learned the necessity of cleaning out equipment before switching from medicated to withdrawal feed. Feed bins, containers, augers, and feeders have to be cleaned.

Many farmers have built new facilities or made renovations so facilities would be easier to clean and control. Some even move hogs to withdrawal pens several weeks before marketing. This prevents accidental consumption of drugs, from feeders and from recycling of drugs through fecal contamination. Many feed manufacturers and producers built separate storage and delivery facilities for medicated and withdrawal feed.

As a result of the cooperative campaign, sulfa violations dropped dramatically. To find ways to correct the remaining problems, several projects are underway in state universities and they're funded by USDA through the Residue Avoidance Program. Today, a new granular form of sulfa makes it easier to avoid sulfa residues at the mill and on the farm. Granular sulfa does not cling to equipment like the powdered sulfa, but precautions are still needed.

The Residue Avoidance Program is working.

The Extension Service is an affirmative action equal opportunity educational institution.

LIVESTOCK LATEST

Name that Bird

HARRISBURG – Birds were in the spotlight during Farm Show week with the return of live poultry to the annual event and the introduction of a new character that will be promoting Pennsylvania eggs and poultry.

The Bird is a lifesize mascot for the State egg industry. He will appear in parades, fairs, hospitals and banquets, and will be visiting many schools. During school appearances the youngsters will learn about egg nutrition and have the opportunity to join the Bird's Club.

"But first The Bird needs a name, so a contest sponsored by the Pennsylvania Egg Marketing Association and the state Department of Agriculture has been in effect to determine what that name will be. The contest runs through March 29th and the winner will be announced on April 19th. Entry forms are available by writing to: "NAME THE BIRD CONTEST", Department of Agriculture, Bureau of Markets, 2301 North Cameron Street, Harrisburg, PA 17110.

The contest is open to all legal residents of Pennsylvania. PEMA members, their family members, Department of Agriculture employees and their immediate family members are not eligible.

Industry leaders predict $70 cattle, $60 hogs

KANSAS CITY, Mo. — Cattle and pork industry leaders predicted improving livestock prices in 1985, at the recent annual meeting of the Livestock Marketing Association, in Kansas City, Mo.

The optimistic forecast was supplied by John Weber, 1984 president of the National Cattlemen's Association, and Wayne Walter, president of the National Pork Producer's Council (NPPC).

Weber, a rancher from Alturas, Calif., began the "Industry Sector Update" session with the comment that "the best thing about 1984 is that it's over." For 1985, "there might be a little light at the end of the tunnel" for producers.

He forecast a slight rise in prices this year, with feeder cattle at $65 cwt. in the first quarter, $72 cwt. in the second quarter, and $70 cwt. the rest of the year.

Weber also predicted a continued liquidation of the national cattle herd, although at 7.6 million head, the cow slaughter will be two million less than in 1984, he said.

With less beef available, there will be a drop in per capita consumption compared to 1984, he said.

The main concerns of producers are interest rates, declining land values and the availability of financing, Weber noted. The unwillingness of lenders to accept "some risk" is hurting the industry, he said.

Walter, from Sublette, Kan., said hog prices should trend upward toward $55 cwt. in February, then turn down again before hitting $55-$60 in July.

For the entire year, lower feed costs may bring a $6-$10 per head profit. However, these lower feed costs could lead to an overexpansion of the national herd, and lower prices, in 1986.

Walter also expressed concern about the trend in U.S. hog and pork imports, "which is rising." Imports could supply over eight percent of the U.S. domestic supply in 1985, and the impact on the domestic industry could be over $2 billion, he said.

This concern led the NPPC to file a complaint with the U.S. Commerce Department and the International Trade Commission charging that Canada is dumping hogs and pork on the U.S. market by using subsidized exports, Walter said.

While the final outcome of the complaint is pending, the NPPC is considering taking similar action against the European Economic Community, he said.

Angus Assoc. will sponsor four steer shows

ST. JOSEPH, Mo. — Four registered Angus steer shows, sponsored by the American Angus Association, are scheduled for this year. There will be three "live" steer shows with one being an "optional terminal" show and one "terminal" show.

Two of the "live" steer shows will be held at the 1985 Western Regional Junior Angus Show on April 28 at Reno, Nevada, and at the 1985 Eastern Regional Junior Angus Show in York, Pennsylvania, on June 28.

The third "live" steer show with an "optional terminal" show will take place during the 1985 National Junior Angus Show at Tulsa, Oklahoma, July 9-12.

The "terminal" steer show which is planned, will be held in conjunction with the 1985 North American International Livestock Exposition in November at Louisville, Kentucky. All steers in this show will receive a combined on-the-hoof and on-the-rail score.

Steers entered in the live steer division at the National Junior Show, may also be entered in the carcass division, and the steers entered in the carcass division must be shown in the live division

Each of the steers and carcasses will be scored, and awards and premiums will be given to the highest scoring entries in each division, and to the entries having the highest overall scores which includes on-the-hoof and on-the-rail. The steers will be shown on July 10 and slaughtered the following morning.

At each of the shows, there will be a minimum live weight requirement of 900 pounds, and

Top fleeces named at W. Pa. Wool Growers meeting

BY BARBARA RADER
Staff Correspondent

HARLANSBURG — When the Lawrence-Butler- Beaver County Cooperative Sheep and Wool Growers met on Feb. 2 at the Liberty Grange, Harlansburg, the 135 members in attendance were treated to some rewarding events.

Following the mid-winter annual meeting in the morning and an all-the-lamb-you-can-eat luncheon, the members heard results of the wool show and youth wool judging contest, and crowned their tri-county cooperative lamb and wool queen.

Later in the day a volunteer panel headed up a question and answer panel to replace scheduled speaker Charles Boyles, director of Ohio State's Eastern Research Farm, who was unable to attend because of inclement weather.

Rachel Hixenbaugh, 16, the daughter of Mr. and Mrs. Joseph Hixenbaugh, Beaver, was crowned the tri-county's lamb and wool queen for 1985 by last year's Pennsylvania Lamb and Wool Queen Peggy McCrumb of Mars.

In her address to the group, Rachael said, "I will be pleased to represent you, the people of the sheep and wool industry."

Also competing for the crown were Janet Shick, 18, runner-up and daughter of Mrs. and Mrs. Joseph Shick, New Castle; and 19-year-old Ann Kriberney, daughter of Carolyn Kriberney, Karns City.

Judges for the queen competition were· Ruth Schnell, spinner, weaver and wool grower, Chicora; Mary Adam, a home economics teacher who also raises sheep, Chicora; and Cy Burry, a former sheep owner of Ellwood City.

Many youth competed in the two age divisions of wool judging. In the junior division, ages 9 to 14, Bridget Whiting captured the trophy and blue ribbon. Wayne Hixenbaugh won in the senior category for teens aged 15 to 19.

Other winners in the junior division were: Austin Whiting, Frances Shick, Maggie Whiting, Annie Shuler, Heather Leslie, Amber Leslie, Adam Whiting and Andy Burry.

Senior winners were Wendy Hixenbaugh, Carl Shuler, Janet Shick, John Shuler, Peggy McCrumb, Amy Musser, Rachael Hixenbaugh and Julie Maxwell

The Wool Show offered four classes for participants. Linda Mosley, Bessemer, took the grand championship over 16 other fleeces with her registered Corriedale low quarter fleece. An avid spinner and weaver, she was also last year's Pennsylvania State Sheep and Field Day champion fleece winner.

Reserve champion fleece winner was 4-H'er Heather Leslie, Connoquenessing, with her 3/8 blood wool fleece. Her winning fleece was from one of her Columbia breeding stock.

Class winners were, 3/8 blood Heather Leslie, first and second; Wally Spence, third; Lloyd McCracken, fourth; and Perry Dunn, fifth Winners in the ½ blood class were· Rick Dunn, first; Harold Dunn, second through fifth; ¼ blood class Lloyd McCracken, first; Heather Leslie; second; Perry Dunn, third. In the low quarter class Linda Mosley was first and champion and Bob Dunn was second.

The group elected seven directors to serve a one-year term. Elected were Robert Burry, Ellwood City; Robert Dunn, Chicora; William Fullerton, Enon Valley; Keith McConnell, Volant; David Whiting, Edinburg; Donald Musser, New Middletown, Ohio; and Gerald Thoma, Kensington, Ohio. Officers will be chosen when the directors meet at a later date.

An impromptu panel consisted of Gerry Thoma, Kensington, Ohio, who is the local group's president; Rev Robert McCrumb, Valencia, a sheep breeder, and Bob Calvert, Mercer County Extension Agent who also raises sheep The panel provided a question and answer discussion with the audience on sheep management. Curt Hughes acted as narrator for the panel

Senior winners of the wool judging contest surround their winner, Wayne Hixenbaugh (center). From left are Wendy Hixenbaugh, Amy Musser, Peggy McCrumb, Carl Shuler, Raechel Hixenbaugh, Janet Shick, Julie Maxwell and John Shuler.

Linda Mosley's Corriedale fleece was named grand champion at the Lawrence-Butler-Beaver County Sheep and Wool Growers meeting on Feb. 2.

Junior wool judging winner Bridget Whiting (center) is surrounded by judges (from left) Andy Burry, Adam Whiting, Maggie Whiting, Heather and Amber Leslie, Austin Whiting, Frances Shick and Annie Shuler.

A Columbia fleece exhibited by Heather Leslie took reserve champion honors.

New York BCA names Cattleman of Year

CORTLAND, N.Y. — Four persons were honored by the New York Beef Cattlemen's Association at the annual meeting Feb. 9 at the Holiday Inn at Cortland.

LeRoy Bannister of Kent was named Cattleman of the Year; William Greene of Freeville was named Extension Agent of the Year; Clyde Hotchkiss of Falconer was named County Director of the Year and Michael Terwilliger of Lindley was given the Youth Award.

Bannister was cited for his service to the statewide beef organization and his work with beef cattle. He has served as treasurer of the Western Division of the New York Beef Cattlemen's Association for 16 years and as secretary of the state organization for several years.

He is a graduate of Cornell University and taught vocational agriculture at Holland Central School and at Royalton-Hartland Central School.

Greene who is livestock extension associate at Cornell University was cited for his work as director of the New York Bull Test, his work helping cattlemen develop marketing alternatives, his coordination of the annual Beef Short Course at Cornell, his service as advisor to the New York Beef Cattlemen's Association, as well as his many beef extension programs across the state.

Hotchkiss is the first recipient of the County Director of the Year Award. This honor was implemented to recognize and encourage the work of the county directors who serve as liason between the New York Beef Cattlemen's Council and committee heads and the beef cattle producers in their county.

Terwilliger, 16, was recognized for his outstanding 4-H work especially with beef. He is a seventh-year 4-H member and immediate past president of the Young Farmers Livestock Club in Steuben County. He has served on the Steuben County 4-H Livestock Sale Advisory Committee. In 1983 he was the winner of the New York 4-H Livestock Judging Contest at the State Fair and high scoring member of the New York team at the national 4-H livestock judging contest at the National Livestock Exposition at Louisville, Ky.

He is the son of Mr. and Mrs. Ervin Terwilliger and a student at Corning West High School.

Band vs. broadcast fertilizer application

PEORIA, Ill. — Despite the recent trend toward band and strip fertilizer application, broadcast applications still have a place in efficient farming.

In fact, certain situations favor broadcast application over banding, according to Dr. Gary Hergert, Associate Professor of Agronomy and soils at the University of Nebraska.

"When labor, time and timing are important, broadcasting may be better for the farmer who wants to cover large acreages, leaving only planting for the spring," Dr. Hergert notes.

In some situations, there is no apparent advantage to either method, so farmers need to make the application decision based on other factors.

"On higher fertility soils there is usually no yield difference between banding or broadcasting," Hergert explains. "Also, broadcast - or band - applied phosphorous (P) or potassium (K) seem to perform similarly on soybeans."

Hergert is quick to point out that there are still situations where banded fertilizer applications show an advantage over broadcast methods

"Fertilizer use efficiency of P and K for corn is greater with banding. On lower fertility soils, less banded P and K will produce the same corn yields as higher rates of broadcast - applied P and K," he says.

Dryland winter wheat and small grains in northern areas also benefit more from band - or seed - applied P and K. this advantage evens out however for small grains in higher rainfall areas, according to Hergert.

Dr. Jim Batchelor, Vice President of Research for the National Fertilizer Solutions Association, agrees with Hergert that the placement options can be confusing.

"Broadcast application has historically been the most common application method. However, new placement technology and increased use of fluid fertilizers have led more farmers to banding, stripping and deep placement," he says.

Batchelor notes that the wide range of application alternatives afforded by fluid fertilizers allows farmers to take advantage of application research in selecting the best method for their operation.

"Whichever application method a farmer chooses, he will be looking to improve nutrient efficiency as opposed to simply increasing application rates," he comments.

Both Dr. Hergert and Dr. Batchelor encourage farmers to consider all factors when deciding on application method. "Yield goals, labor, timing, expense and fertilizer use efficiency will determine whether broadcasting or banding is best in individual operation," Hergert concludes

Ag Chemicals Business appoints international manager

PAINESVILLE, Ohio — Richard L. Urbanowski has been appointed International Business Manager for SDS Biotech's Agricultural Chemicals Business.

Urbanowski will assume responsibility for sales and marketing of SDS Biotech agricultural chemicals in Latin America, Europe, the Middle East, Africa and selected countries in Asia and the Pacific. He will be located at the company's world headquarters in Painesville, Ohio.

Prior to his appointment, Urbanowski served as Southern Area Manager for the North American Agricultural Chemicals Business of SDS Biotech.

Urbanowski joined SDS Biotech's agricultural chemicals business in 1963 (then Diamond Alkali). He has been Technical Supervisor - Product Development, Operations Staff Engineer, Plant Manager and Regional Sales Manager for both the Midwest and Southeast business areas of North America.

SDS Biotech is a strong, new presence in the world of marketing and research of agricultural chemicals and animal health products Located in Painesville, Ohio, it has offices, plants, and research facilities throughout the world, with 1984 sales approaching $200 million.

SDS Biotech is a 50-50 joint venture of Diamond Shamrock of Dallas, Texas, Texas and Showa Denko K.K. of Tokyo, Japan.

Angus steers

(Continued from Page D 2)

immediately prior to entering the arena, the steers will be weighed and weight per day of age will be calculated.

To qualify for premiums at Tulsa and Louisville, entries in the carcass contest must have a yield grade of 3.9 or lower and a quality grade of low choice or better

Entries for these shows must be postmarked by the U.S. Postal Service by: Western Regional Junior Angus Show - March 1, 1985; Eastern Regional Junior Angus Show - May 15, 1985; National Junior Angus Show - June 3, 1985; North American Show - October 1, 1985.

In addition to the premiums and prizes being awarded by the American Angus Association, the Angus Steer Boosters, established by a group of interested Association members, is asking members to contribute to the Angus Steer Boosters Fund. The money collected from this will be used to provide extra premiums at the National Junior Angus Show

For complete show rules, contact the American Angus Association Junior Activities Department, 3201 Frederick Blvd, St. Joseph, Missouri 64501 or phone 816/233-3101.

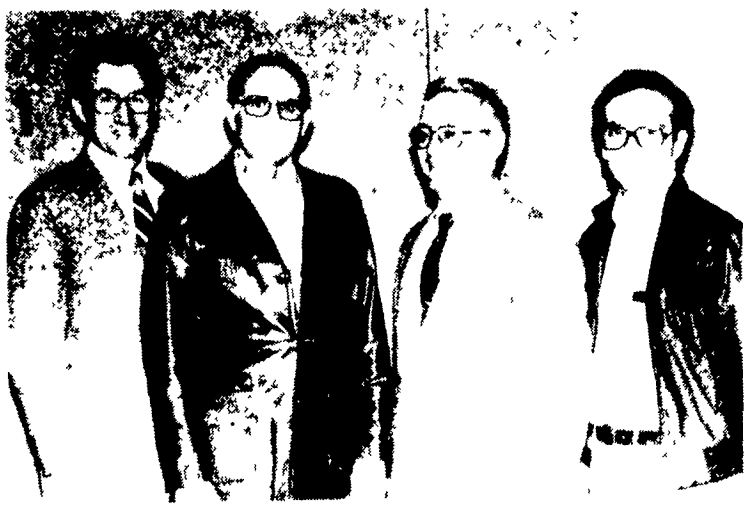
BUSINESS NEWS...



Pennsylvania growers attending the National Potato Council's 36th annual meeting in Scottsdale, Arizona were: (left) Noah Kreider, Manheim; George Wolf, Stewartstown; Sonny Blass, Jr., Coudersport; and Keith Masser, Sacramento.

400 attend Nat'l Potato Council Annual Meeting

SCOTTSDALE, Ariz. – Potato growers, spouses and industry leaders from across the United States flew south to attend the 36th Annual Meeting of the National Potato Council, Jan. 5-8, 1985 at the Marriott Camelback, Inn, in Scottsdale, Arizona.

The NPC Board of Directors, made up of 150 representatives from all potato producing areas, elected the following executive Committee for 1985: president - Doug Michael, Urbana, Ohio; vice president of finance and office procedures - Tom Ford, Alamosa, Colo.; vice president of public relations and marketing - Reuben Earl James, Elizabeth City, N. C.; vice president of governmental relations - Robert Sanders, Harper, Ore.; vice president of grower relations - Richard Watt, Pingree, Idaho; vice president of legislative affairs - Larry Young, Howard City, Mich.

Also the NPC Directors reviewed the Council's existing resolutions and developed new resolutions to govern the activities of the Council during 1985. One new resolution passed by the Council's Board of Directors asks the Council to continue its work to ensure that any immigration legislation passed in Congress include a seasonal foreign worker program.

Another resolution passed unanimously by the Council Directors calls for the Council's immediate action to help stop the new Internal Revenue Service regulation which requires extensive record keeping of mileage and useage of each vehicle for which depreciation or investment credit is claimed.

USDA leaders, Jack Gardner, PACA Administrator and Edward Hews, Federal Crop Insurance Corporation, addressed the attendees concerning the plans of their organizations in 1985. Also, John Van Sickle, University of Florida, spoke to attendees about a new computerized produce marketing system and William Mapp from the Virginia Department of Agriculture's Division of Markets spoke to attendees about the marketing outlook for 1985.

Dozens of organizations and companies displayed their products at the largest ever NPC Annual Meeting Trade Show.

The 37th Annual Meeting of the National Potato Council is scheduled for Jan. 8-12, 1986 at the Inter Continental hotel in New Orleans.

The National Potato Council is the only national, nonprofit trade association representing U.S. potato growers in national legislative and regulatory issues.

White Oak Mills adds ag veteran to sales force

ELIZABETHTOWN – White Oak Mills has named an eight year veteran of agri-business to extend its market north and west of Lancaster County.

Steve Smelter, 35, of Halifax will be serving swine and dairy farmers in Lebanon, Dauphin, Berks, Northumberland, Schuylkill and Cumberland Counties.

White Oak Mills sells a complete line of feeds and concentrates for swine operations under the "White Oak" label as well as the "Garden Spot" line of dairy products.

In addition Smelter will provide nutritional and swine housing consultation as well as the purchase of feeder pigs, the marketing of hogs and the sale of Genesis breeding stock. For dairy customers he will offer forage testing and ration balancing using the White Oak computers along with consultations to insure the correct levels and weights of forages.

"Our goal is to provide our customers with as much help as possible in blending economy with productivity," states the Penn State graduate in Agricultural Economics. Working directly with the farmer, Smelter expects to help them consider all aspects of the farm environment to apply the latest techniques in their operation. "If, for example, we can solve ventilation and manure removal problems, the feeding programs can work so much better," he insists..

That all-important contact with the farmer is improved with the availability of White Oak's toll free telephone service–1-800-468-5524.

Born in Mount Carmel, Smelter is a graduate of Lancaster Catholic High School and received his BS degree from Penn State in 1974. Following a stint as a U.S. Army surveyor he did an internship with the crop reporting service of the U. S. and Pennsylvania Departments of Agriculture. A member of the Tri-County Pork Producers Council, Smelter worked seven years with the Farm Credit Service in Lebanon and Dauphin Counties and has been in feed and grain sales for the last four years.

He is married to the former Barbara Wampler of Harrisburg and they have three children.

"I look forward to serving swine and dairy operations with the complete line of a well rounded livestock feeding company," he concludes.

New Deutz-Fahr DX-3 series tractors come in five horsepower sizes from 43 to 73 pto hp. All are available in two-wheel and all-wheel-drive models.

Deutz introduces five new mid-size tractors

ATLANTA, Ga. – Five new high-performance, fuel-efficient 43- to 73-hp tractors in the popular Deutz-Fahr "DX" series have been introduced by Deutz Corporation's Agricultural Equipment Division (AED), Atlanta, Ga., to Deutz-Fahr dealers from the U. S. and Canada at a new products introduction meeting at Orlando, Fla.

Model numbers and pto-horsepower ratings are: DX3.90, 73 hp; DX3.70, 65 hp; DX3.50, 57 hp; DX3.30, 51 hp and DX3.10, 43 hp.

F.J. Kaplan, vice president-marketing at Deutz Corporation AED, says Deutz-Fahr's new mid-size DX tractors have the functional styling of larger models in the DX series, with easy service access and many distinctive features, including:

– Deutz direct-air-cooled diesel engine power.

Choice of 2-wheel drive or mechanically powered all-wheel-drive (AWD), with 59-inch narrow-row tread width settings for all models.

Optibloc torque-proportioning front axle differential that automatically transfers power to prevent wheel slip is standard on the DX3.90, optional on other AWD models.

– True centerline-drive front axle on AWD models, fully shielded to prevent wrapping, gives maximum crop clearance and efficient power transfer.

–Optional twin-power front 3-point hitch and fully independent front pto for increased field versatility.

– Syncromesh transmissions.

-- Powerful high-capacity hydraulic systems with direct air cooling of hydraulic oil.

– Rollover Protective Structure (ROPS) is standard equipment.

-- Ergonomically-designed seating and controls, low overall height, superior vision and climate-control systems.

– Tough new poly fuel tanks reduce condensation and vibration.

– Hydrostatic power steering and 50-degree steering angle provide ease of handling.

The Deutz direct-air-cooled diesel engines powering the new DX3 Series have a 40-year reputation for easy starting, durability, fuel efficiency and overall operating economy.

Air cooling means faster warmup, more efficient cylinder head operating temperatures and elimination of cooling system parts responsible for a high proportion of maintenance problems and expense in water-cooled engines.

Dealer services are furnished through regional offices in Atlanta, Ga., Davenport, Iowa, Columbus, Ohio, and Regina, Sask, and parts are distributed through four locations in the U. S. and Canada.

Pa. bulls enter Select Sires

PLAIN CITY, Ohio – Glendas Inventor-ET and Brooks-Twain Jetson Park-ET, two young bulls from the state of Pennsylvania, have been chosen to enter Select Sires' Program for Genetic Advancement (PGA) sire sampling system. Based on their outstanding pedigrees, these bull calves have been selected as two of only 140 Holstein bulls from throughout the United States to enter the program in 1985.

Glendas Inventory-ET was bred by Pen-Col Farms and William & Carolyn Pettit of Millville. The dam of this young sire is Whittington Glendell 53, a Very Good (87) Glendell Arlinda Chief daughter with all records over 25,000M and 900F. Her best record, at 2-5, is 28,980M 1,037F 3.6% in 365 days. The second dam is Very Good (85) and has a best record of 24,750M 935F 3.8% in 365 days as a six-year-old. The sire of this bull calf is Sterk R A Ijon, a high, triple plus Elevation son.

The second bull calf to enter Select's PGA, Brooks-Twain Jetson Park-ET, comes from Walter Earl Brooks of Springville. His dam is Brooks-Twain Elevation Penny (VG-87), a high producing Elevation daughter with lifetime credits of 240,000M and 8,372F. She has four consecutive records over 34,500M and 1,100F, with a best of 34,818M 1,412F 4.1% in 365 days. Her July '84 Cow Index is +1,448M +54F +$185. A maternal sister to this PGA bull calf is scored Very Good (88) as a three-year-old with records to 25,511M 1,231F 4.7% in 358 days. The grandam is Brooks Twain Kingpin Patsy (VG-87). She has four consecutive records over 1,000F and three over 30,000M with a best record of 35,879M 1,319F 3.6% in 365 days. The sire of this "Select" calf is Browncroft Jetson, a high PD milk and outcross sire of the breed.

Select Sires, a family of 11 farmer-owned and controlled artificial insemination (A.I.) co-ops, is the nation's largest A.I. cooperative. The basic objective of this federation is to serve the genetic needs of livestock farmers across the country.

York Co. seeks custom no-till farmers

YORK – The York County Conservation District is compiling a list of farmers who will custom plant using no-till drills or corn planters for better erosion control. This list is expected to be available before the spring planting season.

Any farmer with no-till equipment and an interest in doing custom planting for others is encouraged to contact the Conservation District office at 755-0406. The names of custom no-till farmers will be placed on a reference list and made available to other local farmers.

The Conservation District encourages the use of no-till farming methods for better erosion control as well as for fuel and time savings.

For more information on no-till farming and other erosion control practices, contact the Conservation District or local Extension Office.

FROM START TO FINISH...

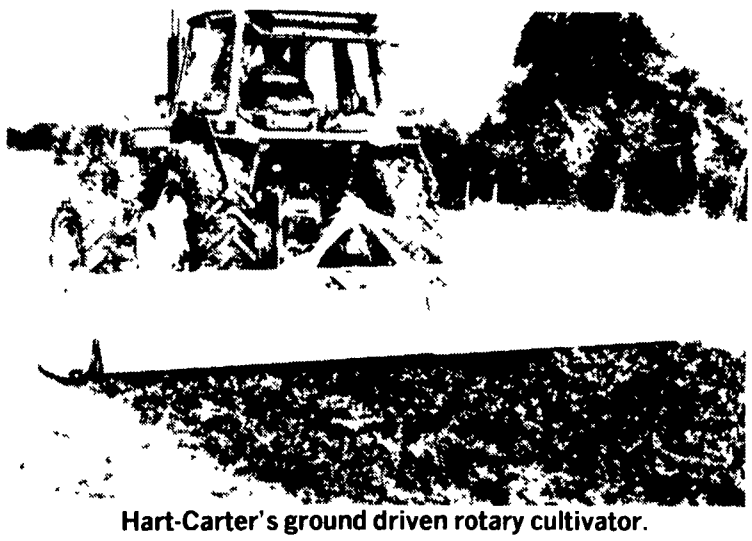
Hart-Carter introduces award-winning cultivator

MENDOTA, Ill. — A unique high speed, soil and energy conserving, ground driven rotary cultivator is now available in the U.S. from Hart-Carter Co. of Mendota, Illinois. Called Dyna-Drive, the tool employs speed differential between two rotating shafts which, when pulled through the field, leave seedbed that offers excellent wind and water erosion control, good germination qualities while reducing energy costs. Dyna-Drive was one of the 1984 winners of Implement and Tractors first design award competition.

The Dyna-Drive is unlike either conventional rotary or tine-type cultivators. It requires no PTO, no gear box and virtually no maintenance. The two rotating tine shafts are ground driven, turning in 3-1 ratio–the front slower, the rear 3 times faster. In effect, the front rotor tines provide a plowing, or lifting action and the rear tines churn the soil. It is estimated the tines will last about six times longer than conventional cultivator points.

The tines on each shaft have spiraling and offset configurations lifting soil upwards, leaving no pathways for wind and water to wash away the soil. The tool leaves clods and trash on top with small soil particles beneath to enclose seeds and provide good germination. Depth control is easily achieved from 1½" to 5½". There are four models ranging in width from 8 to 16 ft.

The Dyna-Drive has been widely used and acclaimed in Europe as a one-pass seedbed tool, often being used right behind the combine to prepare the soil for a second planting. For literature contact Hart-Carter Co., 1501 1st Ave., Mendota, IL 61342 . Phone 815/ 539-9371.



Hart-Carter's ground driven rotary cultivator.

FARM CREDIT SERVICE

Farm Credit News

Wampler to head Federal Farm Credit Board

MCLEAN, Va. — William D. Wampler, of Harrisonburg, Va., was elected chairman of the Federal Farm Credit Board at its meeting last week. Elected vice chairman was Ralph Raikes of Ashland, Neb.

Wampler operates a poultry and livestock farm. He breeds purebred Charolais and Angus cattle, raises turkeys, and maintains a hen breeder operation. He is also vice president of Wampler Foods, Inc., an integrated turkey operation, and is past president of the National Turkey Federation.

A graduate of Virginia Polytechnic Institute and State University with a degree in poultry and animal science, Wampler is a member and past board chairman of the Federal Land Bank Association of Staunton and the Staunton Production Credit Association and served as chairman of the Second (Baltimore) Farm Credit District Advisory Committee.

Wampler was appointed to the board by President Jimmy Carter for a six-year term that expires March 31, 1986. He was nominated by the Production Credit Associations in the Second Farm Credit District, which encompases Pennsylvania, Delaware, Maryland, Virginia West Virginia, the District of Columbia, and Puerto Rico.

Raikes is also a Carter appointee whose term expires on March 31, 1986. He was nominated by the Federal Land Bank Associations in the Eighth (Omaha) Farm Credit District which covers Iowa, Nebraska, South Dakota, and Wyoming.

Raikes is vice president of the Raikes Family Farm Corporation, a corn, soybean, and wheat farm operated by his son. He was a member of the Farm Credit Board of Omaha (Eighth District) for 26 years before retiring in 1978.

The Federal Farm Credit Board is the policy-making body for the Farm Credit Administration, the independent federal agency that supervises, regulates, and examines the banks and associations of the Farm Credit System. The system is made up of borrower-owned lending institutions, organized as cooperatives.

Pounce label approved for corn use

PHILADELPHIA — Spring, 1985 will be the first season that field corn and popcorn growers can apply Pounce 3.2 EC insecticide for pre-emergent use for cutworms and armyworms.

Pounce 3.2 EC is a product for the Agricultural Chemical Group of FMC Corporation.

According to Susan J. Wendler, FMC's pyrethroid product manager, "The pre-emergent use of this pyrethroid is a real breakthrough for corn growers. While Pounce is unsurpassed at controlling cutworms and armyworms, it costs only about half of Lorsban. And for those farmers who can no longer use toxaphene, Pounce is an effective, economical alternative."

The pre-emergent label was approved last summer, but too late in the season for use against cutworms and armyworms.

A recently expanded label allows a wide variety of herbicides to be used pre-emergent for cutworms and armyworms.

Pounce can be applied at 0.1 to 0.2 pounds active ingredient per acre (a.i./acre) any time from five days prior to planting up to emergency for control of cutworms and armyworms.

Pounce can be tank mixed with liquid fertilizers and the following herbicides: Aatrex, Banvel, Bladex, Dual, Lasso, Lorox, Paraquat, Princep, Prowl, Ramrod and Roundup.

As a foliar spray by air or ground application, Pounce controls armyworms, cutworms and European corn borers.

FMC Corporation's Agricultural Chemical Group, headquartered in Philadelphia, is manufacturer of a number of major agricultural chemicals, including Ammo, Ethion and Furadan.

Gehl High-Performance Center

The minute you climb onto a Gehl skid steer loader, you'll get a feel for how easy it can make your life when loading mountains of manure, cleaning around feeders or backfilling construction projects.

That's because Gehl's exclusive LOAD-TRAK t-bar system gives you total, precise control of all loader movements. No other hand or foot controls to learn. And, side-mounted T-bars permit easy cab access plus full view of the bucket.

In addition, the Gehl line of loaders features always-in-sight overhead instrumentation, self leveling on most models and easy servicing. Plus a wide choice of lift ratings in gasoline or diesel powered models. A size and model to fit every need and pocketbook.

Look over these and all the other high-performance features when you test drive a Gehl skid steer that's sized to your dairy operation. Your Gehl dealer can arrange it.

Booms up to 50 feet wide are available for Century's 1000-gallon sprayer.

Century sprayer adapts to row crops, small grains

CEDAR RAPIDS, Iowa – Century has developed a 1000-gallon sprayer that provides high speed operation, easy service and filling and ideal spraying features for the widest possible range of field and crop conditions. This sprayer is equally suited for both broad cast small grain and for row crop spraying.

Standard tires or high flotation tires are mounted on walking beams for smooth, high speed operation over roughest conditions. The new "Steady Rider" boom further steadies the boom for best spray patterns. Crop clearance is 27" and wheel spacings are adjustable for row widths down to 30". A front-mounted walkway with safety tread and heavy handrail permits mounting and servicing from either side. Wide 42, 47 and 50-foot booms are available.

Sprayer can also be equipped for spraying broadcast small grain. Wheel type booms are available in 65 and 88 foot widths. The small grain version has low ground clearance, fixed tread and flotation tires.

Century manufactures a complete line of spraying equipment and is located at 3800 - 44th Avenue SW, Cedar Rapids, IA 52401-2932.

Stauffer Chemical gives herbicide tips

Tank-mixes of soil-applied herbicides remain the backbone of corn and soybean weed control programs, and with good reason, according to John Rogers, technical specialist with Stauffer Chemical Coompany.

"They're economical and effective," Rogers says. "Postemergence products can be useful in some situations, but it's hard to beat preplant tank-mixes for low-cost, broad-spectrum weed control."

One reason for this effectiveness is the way some products complement each other when mixed together. So-called grass herbicides can also have activity on broadleaf weeds, and vice-versa, Rogers says.

"If you have a lot of velvetleaf in corn, for instance, you can start with a good broadleaf herbicide like atrazine," he says. "Then add a grass herbicide that also works on velvetleaf, like Sutan+. Sutan+ isn't labeled for velvetleaf control, but it has activity on it and will boost the control of the atrazine."

Postemergence herbicides generally have less of this cross-over activity between grasses and broadleaves, Rogers says. "By selecting the right preplant tank-mix materials you can team up on troublesome weeds," he adds. 'Sutan+ can also be combined with Bladex, or with Bladex and atrazine in a 3-way mix."

Be sure you follow directions carefully when tank-mixing more than one pesticide in water or liquid fertilizers, Rogers advises. The following precautions can prevent clogged tanks and lines, inaccurate rates of application, and resulting losses of time and product effectiveness.

– Check with your dealer to see if any products have had mixing difficulties in your area. Generic herbicide formulations are often more prone to mixing problems than established brand-name producrts.

– Read product labels and follow exact rates and mixing directions.

– Do a small scale jar test for compatibility. Place one pint of the carrier – water or liquid fertilizer -- in a quart jar. Add each pesticide or a pre-mix of pesticide in water, one at a time, and shake well with each addition. Use each product in the same proportion to carrier as it will be in field use. As a guideline, one teaspoon per pint of carrier is roughly equal to one quart per 25 gallons of carrier.

Unless labels indicate otherwise, add products in this order: wettable granules or powder first, followed by flowables, emulsifiable concentrates, water solubles and their recommended companion surfactants. When tank-mix adjuvants are used, add these first to the water or liquid fertilizer.

Close the jar, invert it 10 times, then inspect the mixture. Inspect again after the jar has stood quietly for 30 minutes. If the mix isn't uniform or if nondispersible oil, sludge or clumps of solids form, the mixture should not be used. Minor separation after 30 minutes is tolerable if the contents re-mix readily with 10 jar inversions In this case good agitation in the field spray tnk will be needed.

– Adding an adjuvant to the spray tank – and the jar test – can prevent many problems where mixtures would fail without it. Some available adjuvants are Compex, Sponto 168D, Uni-Mix, and Unite.

– When tank-mixing in volume, put two-thirds of the carrier in the tank first. Then add pesticides on by one in the above order. Agitate for thorough mixing after each addition. Then, finish filling the tank with carrier.

– Keep agitation going at all times on the way to the fie during application and dur stops. If possible, empty the ta on the day of mixing. Do not all the mixture to stand overni without agitation. Check labels f possible effects of temperature humidity.

– With any new combina test the tank mixture on sm areas, at varying rates and c ditions of use, before large sca use. Check with your extensi service for test data, and variations in the local water supp that may affect performance.

Westfalia catalog availale

ELK GROVE VILLAGE, Ill. – A new Westfalia full-line High Tech Dairying catalog is now available free to dairymen by writing to Westfalia Systemat Division of Centrico, Inc., 1862 Brummel Drive, Elk Grove Village, Illinois 60007

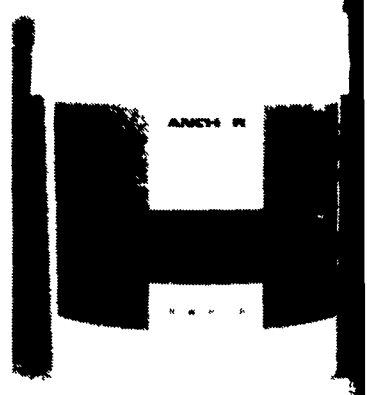
Westfalia's line of dairying equipment includes everything from ACR (automatic take-off) milking units to bulk milk handling equipment in the milk room, and a complete line of cleaners and sanitizers to work with either manual or automatic cleaning systems.

Anchor offers two new livestock insecticides

ST. JOSEPH, Mo. – Two new versatile permethrin insecticide products from Anchor Laboratories are Permectrin Dairy Cattle & Swine Dust and Permectrin Livestock & Litter Dust. Both products protect swine, beef cattle, non-lactating and lactating dairy cattle or poultry from insect pests

Direct application of Permectrin dust to swine controls lice; direct application to lactating and non-lactating beef and dairy cattle controls horn flies and lice and aids in reducing face fly populations; direct application to poultry controls northern fowl mites.

Permectrin Dairy Cattle & Swine Dust is available in a convenient, ready-to-use 2-lb shaker Permectrin Livestock & Litter Dust, available in 25-lb containers, may be used in dust bags, shaker cans or mechanical dust applicators



Anchor's Permectrin Livestock and Litter Dust comes in 25 lb. containers

Why You Should Use Silo Sym On Baled Hay:

allows you to bale tougher
a definite hedge against the weather
saves more leaves
higher protein con tent
enhances palat ability of hay
easy to apply with Gandy Applicator

less problems with Gandy Applicator
non toxic to live stock
non corrosive to the baler
it really works on square bales
round bales and stacks

Silo Sym Your Forage Guardian

Silo Sym can also be applied on haylage

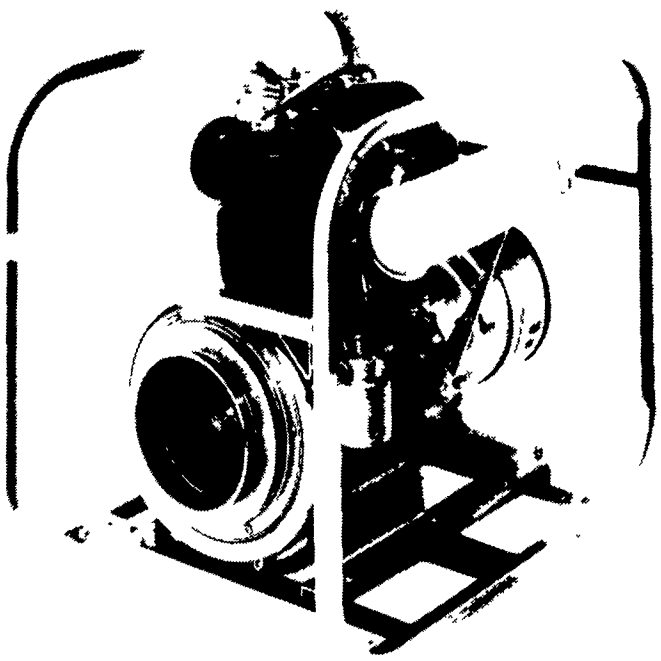
Diesel Porta-Gen is dependable power source



Auto-Gen's 5000-watt Porta-Gen is a dependable and economical source of power for remote locations.

MINDEN, La. – Auto-Gen's new portable diesel generator set can be a dependable source of electricity in remote locations.

The new Porta-Gen, model WD 5000E is mounted on a steel frame, making it easy to carry. It is ideal for marine, construction, rental, utility and industrial uses.

The 5000-watt unit features an electric start. At 120 volts, output is rated at 36 amps, while at 240 volts output is 18 amps.

The use of a single-cylinder, four-cycle diesel engine to drive the alternator provides extended life and efficiency over conventional units. The 10.5 hp Wisconsin Diesel engine has a 2.24 gallon fuel tank.

The unit is equipped with a solid-state exciter system and NEMA class F insulation.

Auto-Gen manufacturers a complete line of industrial-sized portable and vehicle-mounted generators. For more information contact Auto-Gen, P.O. Box 895, Minden, LA 71058-0895.

New Holland honors Pa. inventors

NEW HOLLAND – What value could you put on the creative genius of Eli Whitney? –or Henry Ford? –or Thomas Edison? And, what would the talents of a room full of such inventiveness be worth?

Plenty, according to Sperry New Holland President H. G. "Mac" McCarty, who presided over festivities held January 28, to honor no fewer than 40 inventors–all engineers employed by the Pennsylvania-based farm equipment manufacturing and marketing company

All 40 honorees earned the title of "inventor," according to McCarty, because they had ideas patented by the U. S. government in 1984 "Innovations like these that are put to practical use in ag equipment," said McCarty, "don't just benefit our company and our dealers. They're a significant help to our hard-pressed farming family customers, who feed the rest of America's population and much of the free world."

McCarty and company Engineering Vice President W. T. Kennedy awarded certificates and plaques to the 40 assembled innovators, 5 of whom have obtained 5 patents and 2 who have obtained 10.

McCarty noted that the key to a patentable innovation is recognizing a need farmers have–sometimes even before farmers do–and, of course, before competing farm equipment companies do "Then comes the work," he said, "of applying good, sound engineering principles to meet that need–the result of which is a product that is different enough to benefit the farmer user."

Nat'l Corn Growers president criticizes farm programs

ATLANTA – "No matter how you cut it, a government agriculture program is an umbrella that does not allow the sorting of the efficient from the inefficient. The end result is really a subsidy for inefficiency," said Varel G. Bailey, president of the National Corn Growers Association at the recent annual meeting of The Fertilizer Institute. "We all end up paying more for our food and being less well-off," he added.

The Anita, Iowa farmer told fertilizer industry members that his association favors a market-oriented philosophy in any 1985 farm legislation, "with necessary safeguards" for farmers, and is working "toward pushing Congress in that direction."

Bailey said, "If we could shift from spending billions of dollars to cut production into market development instead, the cost would be less over the long term." When you create demand, it's more permanent; but when you pay to cut production, "you never get done," he added.

The corn growers' spokesman noted that, with only 2.5 percent of U.S. population on farms, "agriculture no longer can count on the Treasury to support and bail it out when things go bad." It's not sound judgment, he said, to build an industry over the long-term based on political support. "That will lead to short term thinking, and farming the farm programs."

The U.S., Bailey said, would be better off if its food and fiber factor were run at full capacity and efforts were made to convert human need into demand. "The need exists. When you add up total food supply in the world, and compare it with the need of humanity, we can use all we can produce," he said, and added, "What is out of sync is the demand – the ability to pay for the commodities."

Loan guarantee booklets available

HARRISBURG – Those seeking loan guarantees or interest deferrals through the Pennsylvania Family Farm Assistance Program may obtain booklets explaining the program and application procedures from Rep. John E. Barley.

The Family Farm Assistance Program is part of the Pennsylvania Economic Revitalization Fund authorized by voters last April.

"The state Agriculture Department has informed me that applications for the new program will be available this week," Barley said. "In the meantime, booklets available in my office explain the procedures for the application and distribution of funds.

"The loan guarantees and interest deferrals available through the program are designed to encourage agricultural development through economic initiatives for beginning farmers and farmers desiring to change or expand their family farm."

Copies of the application booklets are available in Barley's Solanco office, which is located in the basement of the Farm Credit Building at the corner of Route 222 and Scotland Road, just south of Quarryville.

The booklets will also be available at Barley's West Lancaster office at 1754 Columbia Avenue in Manor Township.

Front end loader offered

CARLISLE – Bush Hog's new front end loader provides extra clearance to accommodate the larger tires used on front wheel-assist tractors, according to Bob Weaver of Carlisle, Bush Hog sales representative for Pennsylvania and New Jersey.

"The 2640-QT is also equipped with a wrenchless mounting system that provides for fast and easy attachment to more than 30 two and four-wheel drive tractor models," Mr. Weaver said.

The 2640's hydraulics are the same as those used in the popular 2400-QT loader with twin 2"X21 1/2" double action bucket cylinders and twin 2 1/4"X27-3/4" double-action lift cylinders.

Designed for 40 to 80 HP tractors, the 2640 can lift up to 2,600 pounds to its maximum lift height of 127 inches. It has a clearance of 100 inches with the attachment dumped and a carrying height of 66 inches. Reach is 35 inches fully raised and 75 inches on the ground.

Bucket options include 48, 60, 72 and 80-inch buckets and 60-inch manure buckets. Side cutting edges are available for all material buckets and bucket teeth can be installed on the 48, 60, and 72-inch material buckets. A fork lift attachment is also available.

A bucket leveling indicator and parking stands are standard equipment.

Among companies involved exclusively in the manufacture of farm and land maintenance implements, Bush Hog is the nation's largest with over 100 products and more than 3,000 dealers.

For further information, contact Bush Hog, Department NR-2640, P.O.Box 1039, Selma. A: 36701.

Bush Hog's new front end loader.

When you look at the facts...

AgriMaster™

THE SILAGE INOCULANT THAT BEATS THE OTHERS COLD!

- Speeds fermentation.
- Extends bunk life during feedout.
- Increases feed intake through improved palatability.
- Ninety percent or more dry matter retention in treated silage.
- Increased milk production, higher milk persistency, and enhanced milk protein content.

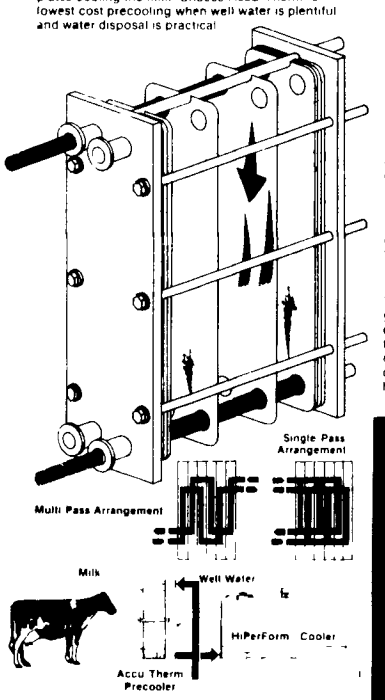
Mr. Dairyman If You Are Interested In Saving Energy Or If You Are Having A Cooling Problem, Please Call us For A No Obligation Demonstration

The Mueller Accu-Therm™ Precooler

...uses well water to precool your warm milk before it goes into your milk cooler!

In seconds 100 degree milk is cooled to within 15 to 20 degrees of well water temperature. Milk flows between every other stainless steel heat exchanger plate while well water flows in the opposite direction on the other side of these plates cooling the milk. Choose Accu-Therm for lowest cost precooling when well water is plentiful and water disposal is practical.



MUELLER Accu-Therm PLATE HEAT EXCHANGER

FOUR REASONS WHY YOU SHOULD HAVE A MUELLER ACCU-THERM PRECOOLER ON YOUR FARM!

1 Reduces Energy Cost
Milk from the cow is about 100 degrees F. Precooling milk by 20 degrees shortens the time the milk cooler refrigeration system must operate by one third. Precooling warm milk by 30 degrees will cut your milk refrigeration system operation in half. A Mueller Accu-Therm lowers your energy costs and reduces your operation expenses.

2 Flexibility
The Accu-Therm is available in wall mounted or floor models to fit any milking operation or space restriction. As your dairy operation grows, Accu-Therm can be easily adapted to increased volume by adding heat exchanger plates. This is a simple job requiring only a hand wrench and a few minutes and does not require moving the Accu-Therm.

3 Low Maintenance
The Accu-Therm Plate Heat Exchanger is a closed system and can be quickly and efficiently cleaned in place with the rest of the milking system.

4 Pays For Itself
The money you save in reduced energy costs will soon repay your investment in a Mueller Accu-Therm milk precooler. For example: with 60 degree F. well water for cooling, milk temperature is lowered by 20 degrees and energy requirements are reduced one third. The typical 5 HP milk cooler condensing unit uses approximately 5 kilowatts per hour of electricity.

Drip Irrigation is the most economical way to irrigate.
(Over 2 Million Feet Sold)

TWIN WALL IV and T-TAPE is the most advanced and trouble free irrigation on the market today. We have special set ups to irrigate 1 to 2 acres from a small well. Also filter set ups to irrigate from stream or pond up to 100 acres or more.

SPECIAL FEATURES:

INDIVIDUAL REGULATORS meter water to each outlet through a large trouble-free regulating tube built into the hose

FILTERS at the beginninng of each regulating tube protect it against plugging It is self-cleaning as the water is turned off and on

OUTLET VALVE at the exit of each regulating tube opens to let the water out but closes to seal out dirt and insects when the water is off. It is not affected by salt build-up as holes are

UNIFORMITY OF FLOW is achieved because each regulator is fed by the full water pressure of the supply tube and not through a low pressure secondary tube This reduces the need to level or contour fields, or to exercise precise placement of the tube in the bed

TRUE DRIP FLOW without the squirting that can erode beds or wet the plant leaves and aisles

CLOSE ORIFICE SPACING promotes a continuously wet bed of even width in all soils without dry areas between each outlet

SELF CLEANING REGULATING TUBES allow full water pressure to force out any particles that pass the internal filter

FIELD LAYOUT IS EASIER with less need for precise surveying and contouring Furthermore, longer runs reduce field piping

LARGE ROLLS aid tractor or manual installation above or below ground

HOSE MATERIAL is superior the plastics used provide for a high strength tough flexible and easily handled hose

TWO FLOW RATES are available, high flow for most applications or to replace other high flow systems, low flow for use in longer runs, where crops and/or soil responds better to low flow, or where the water supply may be limited

WE STOCK FULL LINE OF PLUMBING SUPPLIES

XXX

A Public Auction of a 20 acre farm was held February 9 by Allen M. Faus and Carol M. Faus, 4/10 mile west of the village of Frystown, Bethel Township, Berks Co., Pa.

The property was sold for $80,000 and is to be used as a goat dairy. It included a 2 1/2 story dwelling, bank barn, concrete stave silo, workshop and a calf barn.

Nelson L. Ebersole and Ira R. Shoop conducted the sale.

XXX

A Public Auction of real estate and farm machinery and cattle was held Jan. 30 by Windy Knoll Farm, Karl Diehl, 7 miles southeast of Montrose, Susquehanna County, Pa. A large crowd attended the sale.

The 575 acre farm with 200 acres tillable, balance woodland and pasture with a 14 room house, 109 cow free stall barn, heifer barn, milking parlor, Harvestore silos, stave silo all w/unloaders, equip. shed and loagoon manure storage system was sold for $420,000.

Other prices were: MM gas 900 tractor $3300, J.D. 4010 tractor $3200, Gehl skid steer loader $2775, J.F. 12' offset disc $2900, and N.H. 275 baler $2000.

There were 120 head of cattle sold with the top cow bringing $825. The average of the 68 milking cows was $511.

The sale was conducted by Fraley Auction Co.

Surplus products sold to Iraq

WASHINGTON – Secretary of Agriculture John R. Block has announced the sale of 12,000 metric tons of nonfat dry milk (NDM) and 2,560 metric tons of butteroil valued at $11.8 million to Iraq. The milk was owned by the Commodity Credit Corporation (CCC) and the butteroil will be processed from butter owned by the corporation.

CCC sold the milk for $650 per ton, and the butteroil for $1,562 per ton, both delivered f.a.s. U.S. port. These dairy products are part of the CCC surplus inventory acquired under the corporation's dairy price support program Block said these prices are in line with recent sales of dairy products by other exporters.

Deliveries will be made April 1985-January 1986, Block said The sale provides for payment in U.S dollars over three years with commercial interest rates charged semi-annually on the unpaid balance

USDA announces 1985 tobacco acreage

WASHINGTON — Secretary of Agriculture John R. Block has announced the 1985 acreage allotments for six kinds of tobacco as follows:

—Allotments for Kentuckey-Tennessee fire-cured, Virginia fire-cured and Virginia sun-cured tobaccos are lowered 10 percent.

—Allotments for dark air-cured tobacco are lowered 15 percent.

—Allotments for cigar binder (types 51-52) and for filler and binder (types 42-44 and 53-55) remain unchanged from 1984.

Secretary Block said allotments will be reduced for some farms which in recent years have produced less than 75 percent of their allotments. Reductions are provided for in current legislation and bring farm allotments in line with actual plantings, he said.

Block also said that USDA will hold three concurrent mail referendums Feb. 19-22 for producers of fire-cured, dark air-cured and cigar binder tobaccos to determine whether growers want quotas for the marketing years 1985, 1986 and 1987. A two-thirds majority is required to continue quotas for each kind.

For fire-cured and dark air-cured tobaccos, quotas were last proclaimed on the 1982-84 crops, and quotas for both kinds of tobaccos were approved by 95 percent majorities, Block said. For cigar binder, quotas were last proclaimed on the 1984-86 crops but the quotas were rejected by growers in February 1984. For cigar binder tobacco — grown in Connecticut and Massachusetts — quotas were last in effect in 1983.

Notices showing the 1985 allotments for individual farms will be mailed soon to producers by local county agricultural stabilization and conservation committees. The committees also will mail referendum ballots to all know eligible producers. Any producer who does not receive a ballot may obtain one from the local county ASCS office, Block said

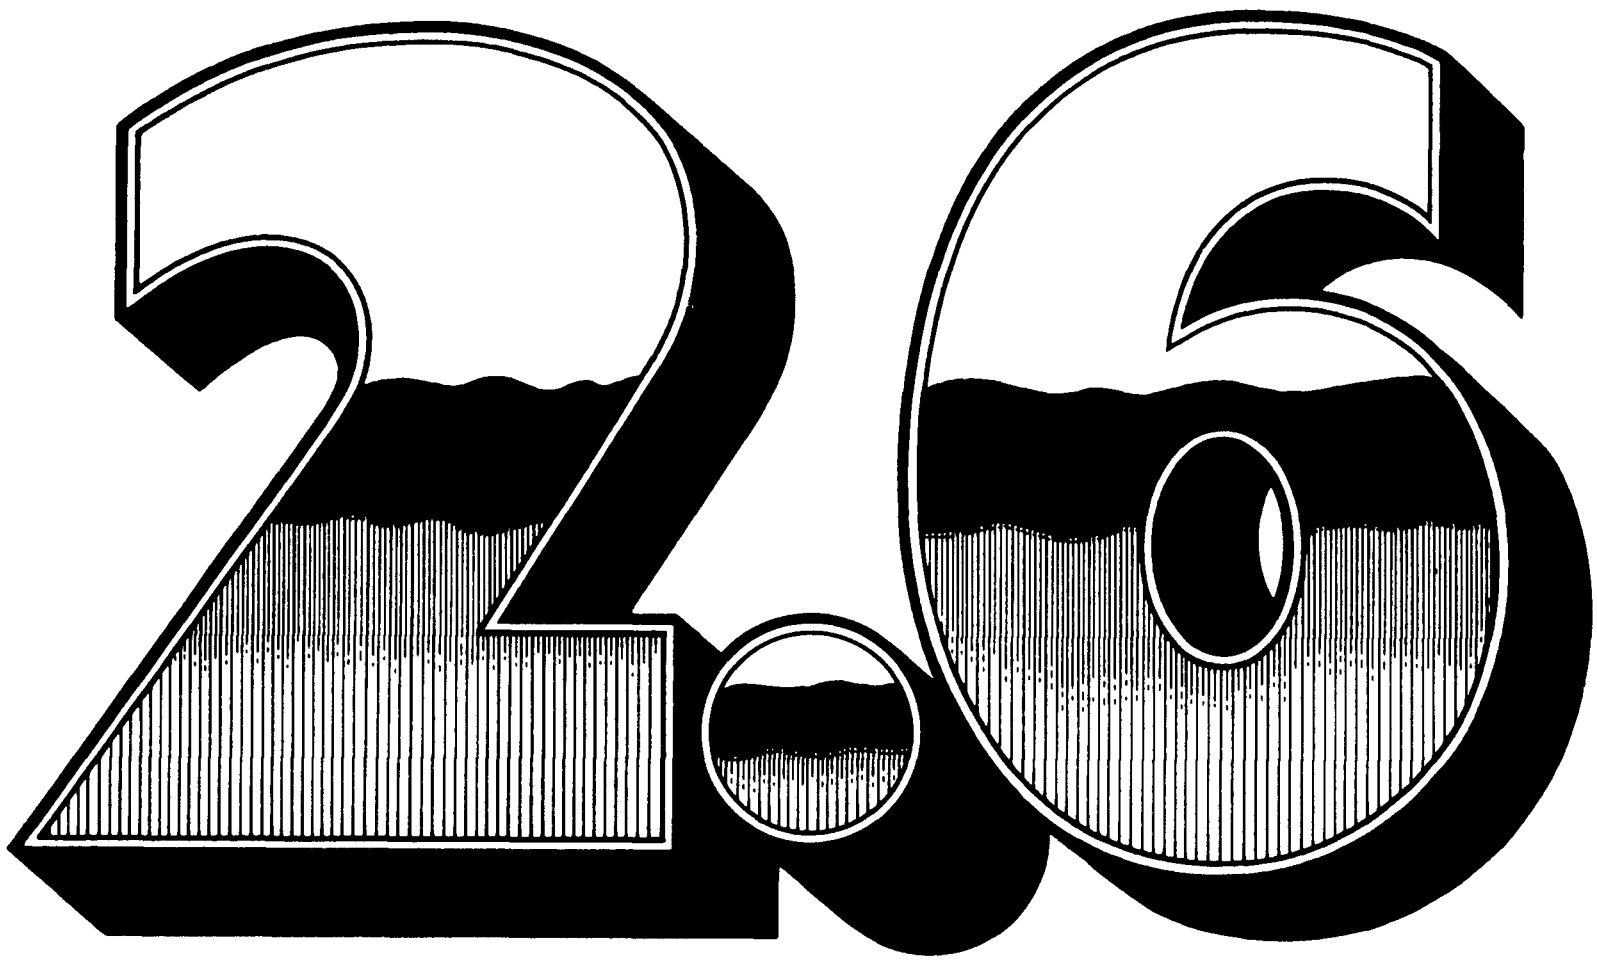
Introducing High Octane® Hog Chow®
brand rations



For feed conversion below the 3.0 barrier.

You thought 3.5 was good, 3.0 was great, and any rate below that was a breakthrough. High Octane® Hog Chow® 2.6 brand rations bring that breakthrough to your farm.

No other feed can match the new 2.6 feed conversion standard. Today, 2.6 is fast becoming the goal for top producers. New High Octane 2.6 beat previous high energy leaders by 9% in feed conversion and 4% in average daily gain.

With High Octane 2.6 growing and finishing rations you're always assured of the highest energy levels available. So hogs achieve optimum gains on about one-third less feed. And they get to market faster for a higher head turnover in the same space.

We'll be looking forward to seeing you at the Keystone Pork Congress!

Stop by and register for a KleenLeen Boar and check out the latest performance data.

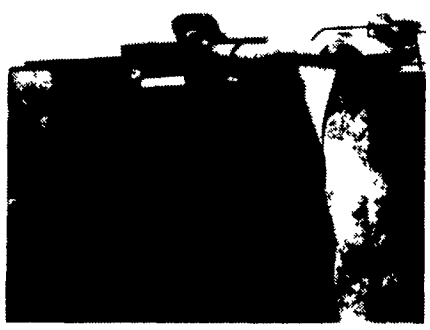
Sells

AXIAL-FLOW COMBINES

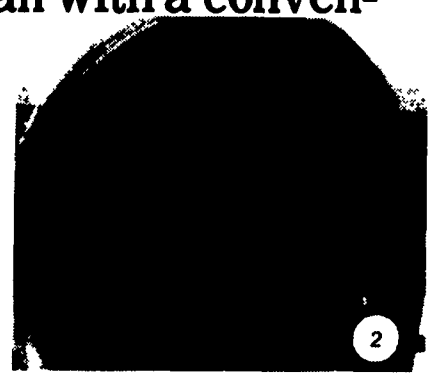
UNEQUALED IN THE FIELD WHERE IT COUNTS

Simple Design - only a single rotor to thresh and separate. Eliminates the straw-walker assemblies common to conventional combines. Less moving parts means less maintenance, less downtime.

Higher Grain Quality - multiple threshing action of axial-flow reduces kernal damage and holds elevator dockage to a minimum.



More Productivity. When your crops are ripe and ready to harvest, Axial-Flow allows you to move faster than with a conventional combine. The rotor's large throat means no bottlenecks up front. You'll be able to harvest at top speed for maximum producitivy, even on side-hills.



AXIAL-FLOW COMBINES ARE SIMPLY MORE PRODUCTIVE

HOOBER'S KNOW AXIAL-FLOW COMBINES BECAUSE THEY SERVICE OVER 100 MACHINES. FOR YOUR FIRST AXIAL-FLOW COMBINE TRY A REBUILT COMBINE FROM US. EVERY USED AXIAL-FLOW COMBINE REBUILT BY OUR EXPERIENCED COMBINE SPECIALISTS IS READY FOR YEARS OF DEPENDABLE TROUBLEFREE SERVICE TO YOU. WE CAN GIVE YOU NAMES OF SATISFIED OWNERS OF REBUILT COMBINES IN YOUR AREA. YOU CAN DEPEND UPON A REBUILT AXIAL-FLOW FROM HOOBER'S

SOME THINGS ARE CHANGING BUT HOOBER'S OLD-FASHIONED SERVICE IS STILL THE SAME

Milk Marketing Inc. elects president

STRONGSVILLE, Ohio – Dairy leader Herman Brubaker, West Alexandria, Ohio, has been elected president of the board of directors of Milk Marketing Inc. (MMI), the regional dairy marketing cooperative headquartered in Strongsville, OH. He was previously first vice president of the Association. The election was held at the annual January reorganization meeting

Brubaker serves on the MMI board of directors and covers District #18 including Ohio counties of Darke, Preble, Greene, Miami, Butler, Warren, and Montgomery.

Currently Brubaker also serves on the National Dairy Promotion and Research Board by appointment of the U.S. Secretary of Agriculture John Block, and is the president of Mid East United Dairy Industry Association (UDIA), Marysville, OH. Mid East is a member unit of the national UDIA, Rosemont, Illinois.

Brubaker farms in partnership with his sons, William and Charles, and milks 70 head. He has been dairying for 30 years and a member of a milk marketing cooperative for 27 years.

Besides MMI activities, Brubaker is active as a director for the National Milk Producers Federation and National United Dairy Industry Association. He is also active in the Preble County Dairy Service Unit and the Great Lakes-Southern Milk Inc.

Other officers elected were Duncan LeCompte, Shelbyville, Kentucky, first vice-president; Roland E Higgins, Sunbury, Ohio, second vice-president,; Ralph Baumgardner, New Carlisle, Ohio, secretary, and Carl I Johnston, Waynesbury, treasurer

MMI is a 9,000 member dairy farmer owned cooperative encompassing an eight state midwestern area including Ohio, Indiana, Pennsylvania, Michigan, New York, Kentucky, Maryland and West Virginia Last year MMI marketed more than 4 6 billion pounds or 547 million gallons of milk.

Wheat acreage reduction programs offered

LEESPORT – The 1984 wheat crop totaled 2.60 billion bushels, the third largest on record and 7 percent over 1983's production, according to USDA's December crop production report. The 66.9 million acre harvest is 9 percent above the previous year's level.

Last year's generally favorable weather conditions produced above average wheat yields of 38.8 bushels per acre, only six tenths of a bushel under the all time high 39.4 bushels an acre established in 1983.

Donald E. Lutz, Chairman of the Berks County ASC Committee, said wheat growers in Pennsylvania contributed 8,360,000 bushels to the 1984 wheat crop. To produce the crop, Pennsylvania farmers harvested 220,000 acres of wheat, averaging 38 bushels an acre. In 1983, farmers harvested 200,000 wheat acres and produced a 7,600,000 bushel crop. "Price support loans will be available on 1984 wheat until March 31st," Lutz said.

The large crop put wheat supplies at a record high, according to USDA, just under 4 billion bushels However, forecasts for a rise in wheat exports and continued heavy domestic use of wheat will likely result in ending wheat stocks remaining relatively unchanged. Because current supplies are large relative to use, Mr. Lutz said wheat growers may want to consider the wheat acreage reduction program to help reduce carryover stocks to reasonable levels and strengthen farm prices.

"For reducing their wheat acres by 30 percent in 1985, we offer wheat growers target price protection at $4 38 per bushel, national average price support loans at $3 30 per bushel, and land diversion payments at $2.70 per bushel," the ASCS official said

Farmers have until March 1st to apply for the 1985 wheat acreage reduction and land diversion program.

KEEPING AMERICA ON THE GROW

The satisfaction that comes from doing a good job of farming

"Liming is one of the most important factors in keeping your soil in the highest productive range By raising the pH from a level below 6 0 to 6 5 or higher, you can expect to harvest as much as 5 more bushels of corn per acre, with similar increases for all other forage and cash crops

The Dairy Business

By Newton Bair

WINTER BARN VENTILATION

Is water dripping off the stable ceiling? Are the cows coughing? Are you glad to get out of the barn just to get away from the smell? Are there more mastitis flare-ups than usual?

These are some of the symptoms of a badly ventilated barn in winter. And bad ventilation alone will cause more herd problems than all the cold and snow that Old Man Winter can possibly throw at you. Stale, moisture-laden air adds greatly to the normal stresses of winter.

Most free-stall barns or open shed housing that is properly designed will have adequate air flow to prevent moisture problems in the winter. All they need is sufficient roof pitch, and an adequate vent opening at the highest point of the roof. Then the air will flow up and out, as it is warmed and gathers moisture. Usually, no fans are necessary, if there is adequate intake of fresh air, and it is unimpeded.

The real stinkers (pardon the direct language) are barns that are so well constructed that forced ventilation is a must. And if that fan driven air is not correctly calculated for your barn, you will be seeing all of the symptoms I mentioned in the opening paragraph.

The calculations for fan sizes are simple and direct. But don't be fooled; fan size and capacity are only a small part of the installation and operation of the ventilation system. You must also pay close attention to where the fans are placed, and most important of all, to the size and placement of the air inlets.

CALCULATING FAN CAPACITY

Two fan systems are usually recommended. One fairly small fan with a capacity of about 50 CFM per cow should run continously, to exhaust stale, moist air at all times. The other, larger fan should have a capacity of 150 CFM per 1000 pounds of cow weight. This one is normally on a thermostat set to run the fan when the temperature goes above 55°F. The combined capacity when in full operation is around 200 CFM per 1000 pounds of cow.

Some well-designed systems may have a spring and fall setting, to compensate for milder weather when windows and doors may remain open, or the cows move more freely in and out the barn. But the basic formula works very well, when all the pieces are in place and working right.

So, your calculations for fan size are thus: For 60 Holsteins weighing 1250 pounds, you calculate the body weight first. 60 times 1.250 equals 75, or the equivalent of 75 one-thousand pound animals. Thus the small fan should have a capacity of 50 times 75, or 3750 CFM for constant use. The large fan should move 150 times 75, or 11,250 CFM, when at full speed.

The fans should be placed on a tight wall, and not exhausting against the prevailing wind Keep slots 20 feet from the fans.

FRESH AIR INTAKE SLOTS

A good ventilation system is designed so that the air is evenly distributed through the barn. Slotted air inlets located along the top of the wall, covering as much of the wall as possible, are the best design and the simplest to control. They should be as uniform as possible to prevent drafts in some places and dead spots in others. Open doors, open or broken windows, and open hay holes can really louse up an otherwise good system. The ultimate secret of good ventilation is enough air and good distribution. Inadequate or poorly placed intake slots can make good fans totally useless. So be very careful to get a complete job when you spend money for fans.

One more thing about those older barns with a calf pen in the northwest corner. That is the worst place to put the fans. All the stale, wet air flows right over the calves. No wonder they end up with pneumonia. You would too, if you lived there.

Check the whole system regularly for dust and dirt. A little dirt on the fan blades and the louvers will cut down the efficiency more than you think.

Just remember that both cows and calves can tolerate more cold temperatures than you or I can. One thing that they can't and won't tolerate is moisture and lack of oxygen, that is, they need good old fresh air!

Long elected Club president

UNIVERSITY PARK – Karen L. Long, Akron, was recently elected president of the Penn State Dairy Science Club at the club's first meeting of 1985.

The Dairy Science Club is a university organization for education and promotion of the dairy industry. Some of their major projects include the Nittany Lion Fall Classic (a Holstein consignment sale), the Penn State Dairy Expo, Spring Dairy Cattle Judging Contest, the Dairy industry in another state, and the sale of cheese boxes at Christmastime.

Miss Long is a junior, majoring in dairy production. She is a member of the Delta Theta Sigma Fraternity, an agricultural fraternity, where she is president of the Little Sisterhood Program, and a member of the Inter-varsity Christian Fellowship.

SPRING FEVER SPECIALS

Big Savings on New MF Tractors...

Start the spring off right with great deals on our full line of Massey farm tractors Thanks to BIG factory discounts direct to us from Massey-Ferguson plus special financing offers, we can offer you the deal of the year

9.9% APR MF Financing or Waiver of Finance Charges 'til September 1, 1985*

And Massey Combines, too.

We can offer you special pre-season savings on all new Massey combines, including the popular 500 and 800 Series machines You'll literally save thousands of dollars if you act now See us for full details

Cornell ag and life sciences research wide-ranging

IDTHACA, N.Y. — What do the following have in common?

The development of low-lactose ice cream and opaque containers to protect milk; techniques to improve home lawns and predict potholes; research to assess the quality of Adirondack water supplies, to bring back polluted lakes, and to understand why most Canada geese don't migrate as far as the Carolinas anymore; and studies ranging from electric fish, phosphorescent bacteria, and annoying caddisflies to mites that attack honey bees, and the relationship of protein to cancer.

They are just a few of the wide-ranging research projects conducted last year in the New York State College of Agriculture and Life Sciences at Cornell University. In addition to a focus on agriculture and agricultural economics, the College is devoted to the life sciences, food technology, nutrition, education, and communication. Its research reflects the scope and depth of study that benefits consumers, educators, and scientists in many disciplines.

Cornell food scientists, for example, have developed an ice cream that is low in lactose, a milk sugar that many people around the globe cannot digest. The ice cream has up to 75 percent less lactose and 50 percent more protein than normal.

Other Cornell food scientists succeeded in developing an opaque milk container that blocks the penetration of light. The new creamy-yellow plastic container minimizes flavor and nutrient losses that are common with glass and transluscent plastic containers.

Potholes cost American motorists an estimated $40 billion annually. If roads are repaired at the right time, however, potholes will not crop up on streets and highways. In a Cornell highway engineering study, a road test device – the "Falling Weight Deflectomter" (FWD) – was proven effective in pinpointing where, when, and how roads should be repaired. Widespread use of the device could result in better quality roads and substantially reduced maintenance costs.

Two-thirds of the public and one-half of the private community water systems in New York State's Adirondack Park have been contaminated by animal wastes in recent years, a Cornell study drevealed. Furthermore, many of the community water systems are seriously understaffed and soon will be in need of major repairs. A Cornell rural sociologist also found that nearly half of the public and two-thirds of the private water systems are not tested for contamination at the required intervals.

As part of a larger Adirondack Park study, a Cornell agricultural economist determined that the natural resources in the park are critical to the survival of the inhabitants of communities in these majestic New York mountains. After wages and social security checks, the people of the area rely on the natural resources for food, fuel, and, in some cases, a basic livelihood.

In a project aimed at alleviating the problem of millions of moth-like insects called "caddisflies" that invade communities each summer along the Niagara River between Buffalo and Niagara Falls, Cornell entomologists are exploring several biological control measures. Possible solutions include the use of: "black light" traps to lure the critters and kill them en masse; fish that prey on the larvae dwelling on the rocky river bottom; and a certain fungal species that causes a disease deadly to the bugs.

On other fronts, Cornell researchers found a way to keep a new kind of colorful flower – the "Alstroemeria" – blooming at any time of the year. This paves the way for year-round production of this flower for consumers. Other good news for home gardeners and growers is an increase in pepper yields – up to 2,000 bushels an acre; that's seven to ten times the average yield in the northern parts of the United States. A package of cultural practices to boost the pepper yield was perfected by a Cornell scientist.

Some plants and microorganisms enjoy peaceful coexistance, a phenomenon known as symbiosis. A Cornell scientist discovered that a group of fungi called VA mycorrhiza takes up residence in the roots of many types of lawn grasses, boosting the growth of grasses even when soil is poor in phosphorus and moisture. Just how the fungus helps grass grow remains a scientific puzzle, but it may help home owners keep their lawns greener and healthier under low-maintenance conditions.

In another lawn study, Cornell researchers successfully tracked down the real culprit of Fusarium blight, a major lawn disease that creates ugly patches of dead grasses in home lawns and golf courses in summer. At least two types of little known fungi turned out to be the offenders. The finding will enable scientists to devise more effective control steps against the disease.

While some animals use colors, chemicals, chants, dances, and displays of light to entice mates, others, particularly certain fish, literally "turn on" their prospective sexual partners by using electrical cues. These electrical signals in fish are used for more than courtship, though. Some fish use electrical "songs" to communicate aggression, submissiveness, species recognition, and even for navigation, according to discoveries by a Cornell biologist.

Many fish shine an eerie blue light in the black deep of the seas, but some, unable to produce their own light, rely on bacteria that serve as living lanterns. An organism called Photobacterim fischeri, for example, lights up the sacs under the chins of Japanese pinecone fish.

Other types of bacteria illuminate areas on squids, tunicates, flashlight fish, and angler fish. The host fish use the beacons of light to attract prey, repel enemies, and communicate with one another. In exchange for the light, the fish provide free "room and board" for the bacteria.

Fifteen years ago, most sport fish species in Lake Ontario were on the verge of extinction due to pollution, lamprey predation, and over-exploitation by commercial fishing. Today, the Great Lake is one of the nation's hot spots for sportsfishing. To bolster this industry, scientists from Cornell, the New York State Department of Environmental Conservation, and the U.S. Fish and Wildlife Service conducted one of the most comprehensive studies ever undertaken to estimate angler use, catch, and demographics in New York's water including Lake Ontario, Lake Erie, the Niagara River, and 25 tributaries. Management recommendations will be made this year.

Even though black and poor children are overrepresented in the lower tracks in schools, this overrepresentation is not a result of teacher bias, according to four studies conducted by Cornell educators. Results showed that the ability of the children consistently correlated with academic grouping rather than with parental socioeconomic status or race.

Also in the field of education, it was found that the timing of a student's absence can have a greater effect on his or her learning than how often that student is absent from school.

In the nutrition field, it was found that eating one major meal a day, rather than several smaller ones, may play a role in promoting certain kinds of cancer, particularly cancer of the colon. A Cornell nutritional biochemist also linked low-protein diets with cancer of the colon while the same diet may protect against cancer of the liver.

The more spouses talk to each other as individuals and not as they do to other people of the opposite sex, the more successful the marriage is likely to be, according to a Cornell study on communication. theory. One of the most important factors influencing the quality of marital relationships, though, is the ability of spouses to adapt to each other, their relationships, and evolving domestic contingencies.

For generations, tens of thousands of Canada geese have used the so-called Atlantic flyway to migrate annually between Canada and the Carolinas. For reasons not well understood, the geese now migrate shorter distances and winter north of the Carolinas. To find out why, a Cornell wildlife biologist and scientists from eight eastern states are studying the migratory pattern of these birds by marking more than 30,000 Canada geese with yellow neck collars and leg bands. Bird watchers and hunters are urged to report their sightings. During 1984, more than 2,000 sightings were reported from as far away as Quebec and Ontario

Don't drive heavy equipment in wet fields

CHAMBERSBURG — Don't drive heavy equipment in fields that are wet Soil compaction destroys soil structure and reduces crop yields, states John Akers, district conservationist with the Chambersburg office of the USDA Soil Conservation Service

One Franklin County farmer reported a 20 percent reduction in corn yield on a field where he had spread manure during the winter over a field where he did not spread manure before

Depending on the type of soil and tillage done to the soil, it may take up to seven years for nature to return the soil to its uncompacted condition Also letting crop residues or planting cover crops help to add organic matter to the soil and improve soil structure to minimize the problem of soil compaction.

Anyone desiring information about soil management techniques to minimize soil compaction should contact the SCS office at 550 Cleveland Avenue, Chambersburg, phone 264-7013

HOT DEAL 5

FOR WINTER BUYERS!

Now is the time to buy. We're giving cash dividends, low financing rates and special clearance allowances. Here's your chance to save big on the equipment you'll need next season.

HOT DEAL #1

WINTER BUYER'S DIVIDEND—You can earn a cash dividend for the initial purchase of any new, eligible hay or forage machine purchased by March 31, 1985. You can earn an even larger dividend on subsequent purchases—from $900 to $4,500, depending on the machine. This dividend is earned regardless of the financing method used

HOT DEAL #2

NEW, LOW FINANCING RATES—Buy equipment with big dividends and get super-low financing! We're making it easy to purchase the equipment you need The rates listed below are in effect through March 31, 1985 Eligible equipment is new and used hay and forage products, grain windrowers, tub grinders, grinder-mixers and manure spreaders

0% A.P.R.
financing for 12 months (monthly payments required)

9.9% A.P.R.
financing for 24 months (monthly, quarterly or semi annual payments required)

7.9% A.P.R.
financing for 18 months (monthly or quarterly payments required)

11.9% A.P.R.
financing for 36 months (monthly, quarterly or semi annual payments required)

For new, self-propelled hay and forage equipment.

12.9% A.P.R.
financing for 48 months (monthly, quarterly or semi annual payments required)

13.9% A.P.R.
financing for 60 months (monthly, quarterly or semi annual payments required)

HOT DEAL #3

FREE FINANCE—Eligible equipment includes new and used hay and forage products, grain windrowers, tub grinders, grinder-mixers and manure spreaders Use dates vary according to products and geographic area.

HOT DEAL #4

DIVIDENDS FOR CASH—If you like doing business the old-fashioned way—with cash—we've got a hot deal for you Until March 31, 1985, you can earn a cash dividend when you buy new, eligible hay or forage equipment or a grain windrower. This dividend is in addition to the Winter Buyer's Dividend for these products Until February 28, 1985, you can earn a dividend on new grinder mixers, manure spreaders and tub grinders But hurry, because the sooner you buy, the bigger the dividend

HOT DEAL #5

SPECIAL CLEARANCE ALLOWANCES—You can save big on certain new hay and forage products, depending on available inventory We're giving special clearance allowances on the Model 892 forage harvester, Model 114 pivot tongue windrower and the Models 846, 847, 851 and 852 round balers

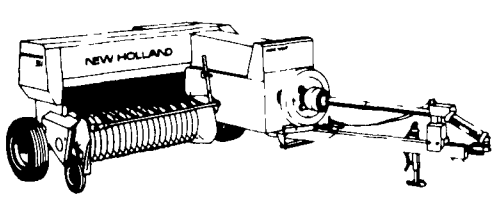
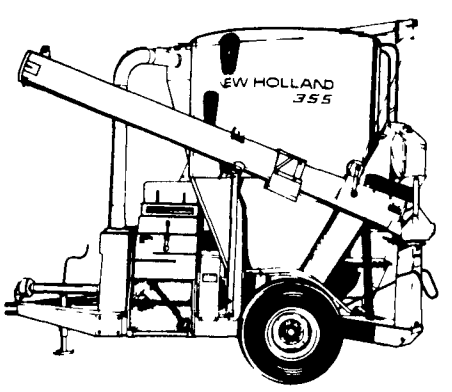
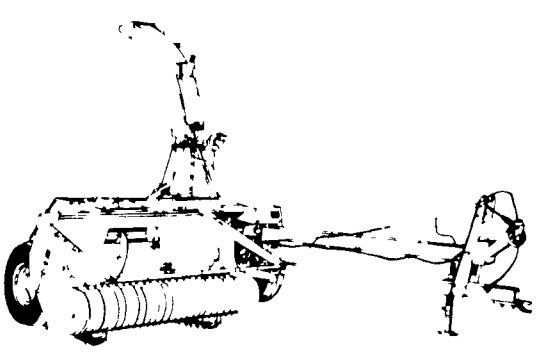
SPERRY NEW HOLLAND







Cornell economist looks beyond milk diversion program

ITHACA, N.Y. – American dairy farmers are likely to step up their milk production this spring when the federal government's milk-diversion price support program ends in April, according to a Cornell University economist.

To the dairy industry, the ending of the support program may mean early retirement for a number of marginal operations whether production steps up or not. To the consumer, it may well mean steady, if not lower, milk prices. And to many now in the federal government, it is perceived as further evidence that dairy intervention programs do not work in the long run.

Such are the conclusions of Andrew M. Novakovic, an assistant professor of agricultural economics in the New York State College of Agriculture and Life Sciences at Cornell.

Under the milk diversion program, the federal government paid farmers $10 for every one hundred pounds of milk "diverted" in order to spur farmers to cut production, and thus reduce milk surpluses. Diverted milk refers to the net decrease in the amount of milk a farmer currently markets when compared to the amount he sold during an earlier "base" period.

"While many who signed up for the maximum diversion under the program may retire permanently (due to age or their belief that they are not able to compete economically any longer), the majority of the program participants, unless they do retire, would be foolish not to return to full-capacity operations once the payments cease," Novakovic says.

It was the federal government's desire to support dairy farmer's prices and incomes, coupled with its reluctance to acquire more of the milk produced by this country's robust dairy industry, that brought on the milk diversion program.

The years 1978-83 saw a steady rise in production, from 123 billion to 140 billion pounds. Consumption rose during that period too, but at a much lower rate.

Under the dairy price-support program, the surplus could be sold to the government. In 1979, the federal government purchased 2.1 billion pounds of excess milk in the form of dairy products. By 1983, the figure had leaped to 16.8 billion pounds. Clearly alarmed by the trend, the government instituted the milk diversion program, but only from January 1984 through the first quarter of 1985.

The proponents of the milk diversion program hoped to reduce production more quickly and less painfully than would be done by simply lowering prices. The intent was for a "quick fix" to a complex problem, one which had taken many years to develop, Novakovic notes.

The milk diversion program, overall, has helped the government reduce the money spent in dairy price supports, Novakovic says. In 1984, the government reduced the milk it bought from farmers by nearly eight billion pounds. That is 43 percent less – a significant reduction.

"But several important questions remain," Novakovic says. Even if the government ran the program for ten years, is there any assurance that production would not leap again when the program finally ends? What would happen with that kind of government intervention over a long period of time? Would the $10 figure remain the same? Would a farmer's base period stay at the same level?

Perhaps these same questions plaque government officials. Federal budget director David Stockman recently proposed ending all federal price supports for the dairy industry by this time next year. Secretary of Agriculture John Block, however, objected to such a quick stoppage. The two have compromised, and if they get their way, the entire dairy price-support program may be phased out bit by bit over the next five years.

This plan, of course, has to weather torrents of opposition from the dairy industry and must be passed by Congress.

"Assuming the Reagan administration's proposals clear Congress, and they may well not in their present form," Novakovic explains, "then we could expect the elimination of government purchases in 1987 and the removal of all dairy price supports in 1990. That would leave the dairy industry with a free market."

This would no doubt cause uncertainty and instability among farmers and the dairy processing industry. To the operators of economically weak farms, it may mean retirement – "voluntary and not-so-voluntary," according to Novakovic. Other dairymen, however, would scale their operations up or down to match the prices and costs they face. Overall prices and production would be geared to the amount of milk that could be sold commercially.

Consumers may see quicker and greater swings in the price of milk at the food store. The overall effect, however, may be somewhat lower prices for milk and other dairy products, Novakovic says.

Farm organizations demand U.S. fiscal responsibility

WASHINGTON, D C - One million post cards demanding fiscal responsibility through reduced federal spending have been delivered to President Reagan and members of Congress by members of the ' Balanced Budget Brigade" The group is a coalition of national and state farm organizations, commodity groups, home. builders, realtors and members of the financial community.

Elton Smith, American Farm Bureau Federation vice president, said a balanced federal budget achieved through spending reform must be accomplished now in order to lower interest rates. A public lack of confidence in present national fiscal and monetary policies 'especially in future actions of Congress, the Federal Reserve and the banking system" has caused interest rates to remain high because leaders fear inflation and do not want to caught by changing rates

In distressed economic areas of this country, many farmers and ranchers are financially trapped by high interest rates at a time of depressed commodity prices and reduced land values Lower interest rates are necessary to their survival," the Michigan dairyman said.

Other farm groups taking part in the activities included the National Grange, the National Farmers' Organization, National Corn Growers Association and the American Soybean Association Representatives from each organization agreed the federal budget must not be balanced through increased taxes

According to Smith, Any new taxes large enough to affect the deficit would surely increase interest rates, reduce disposable income and lower standards of living "

Field-drying forage should be this easy.

The longer legume forage lies in windrows drying, the more it loses weight, protein, nutritious leafs, and digestibility.

That's money lost.

Dry it faster. With Beacon Fast-Dry Forage Conditioner.

You'll get better forage—and more of it—out of the field faster. You'll also reduce yellowing of new growth, crop loss, and damage to the forage by weather and equipment.

See your Beacon Advisor or contact us: Beacon, Cayuga, NY 13034, phone (315) 253-7331

1984 feed grains eligible for reserve

WASHINGTON – "Feed grain producers with maturing 1984-crop barley, corn and sorghum regular loans may place their crops in the farmer-owned reserve," Secretary of Agriculture John R. Block has said.

"Producers with 1984-crop oat regular loans may place their crops in the reserve if the oat reserve is not in release status when the regular loan matures," Block said. The oat reserve is currently in release status Current provisions – a storage rate of $.265 per bushel for corn and barley, $.20 per bushel for oats and $.4732 per hundredweight for sorghum and no reserve minimum – will apply."

USDA had said it would review the size of the reserve before the regular 1984-crop loans matured. "Because some barley and oat loans will begin to mature on February 28, an announcement on reserve availability must be made now," Block said.

"With this action, it is not likely that the feed grain reserves will reach 1 billion bushels before 1984 regular loans begin to mature," Block said.

Farmers will not be permitted to convert existing and maturing feed grain reserve loans into the current reserve. The trigger release level will be $3.25 per bushel for corn, $2.65 per bushel for barley, $1.65 per bushel for oats and $5.54 per hundredweight for sorghum. Interest is charged on reserve loans during the first year in the reserve. No interest is charged after the first year, except during certain release periods.

Producers should contact their county Agricultural Stabilization and Conservation offices for further details.

Governor's economic program includes family farm aid

HARRISBURG – Gov. Dick Thornburgh has announced that a cabinet-level report on the $190 million three-year Economic Revitalization Program indicates "that substantial progress is already being made toward the program's basic goals: stimulating business development and creating jobs."

Thornburgh received the progress report from cabinet members responsible for implementing the voter-approved program during a meeting of the Economic Development Committee of the Cabinet at the Governor's Home.

The six-month report included the following items:

*Approximately $3.7 million in business development loan applications have been received and are being processed under the $50 million Business Infrastructure Development program. These projects are expected to generate several million dollars of private funds and hundreds of new jobs.

*Nearly $200,000 in applications have been received for Pennsylvania Capital Loan Fund programs to aid in small business growth as a supplement to existing state and federal initiatives.

*The Ben Franklin Partnership Board approved this week additional funding under the $3 million Engineering School Equipment Program, making grants totalling more than $200,000 to Pennsylvania State University and Villanova University which have, in turn, attracted nearly $700,000 in private matching funds. The engineering equipment program now has made a total of $378,000 in grants, which have attracted about $1.4 million in private matching funds.

*The Pennsylvania Conservation Corps (PCC) currently has authorized 670 persons to work on $26 million worth of projects in state parks and forests, and 105 participants are already on the job.

*Initial applications will begin to be processed in about a week for the $10 million Family Farm Assistance and $5 million Minority Economic Development programs, completing implementation of all 11 in the Economic Development Program's components.

*Appointment of an Agricultural Development Advisory Committee and approval by that committee of guidelines for the Family Farm Assistance Program have been completed. These were the final steps in making available up to $10 million in loan guarantees and interest deferrals to Pennsylvania family farmers.

*Loan organizations in 56 of the 67 counties have expressed their intention to help administer the Family Farm Assistance Program by making initial reviews of and recommendations on loan applications.

*The state's 14 community colleges and 144 vocational schools will begin receiving equipment in the spring under the $27 million Vocational Instructional Equipment Program. The equipment will enable them to provide vastly-improved training, especially in fields which are becoming increasingly dependent on advanced technology such as robotics, medical technology and computer-assisted mechanics.

*A total of 661 letters of intent were received by the Jan. 10 deadline indicating interest in the $30 million Recreational Improvement and Rehabilitation Program. They are being processed by the Department of Community Affairs.

*$50 million in temporary financing has been developed to insure prompt disbursement of funds after loans are approved.

"I am pleased at the progress being made on this vital program," said Thornburgh, "and by the number, quality and diversity of proposals being received from businesses, educational institutions and other organizations.

"Not only are the various components of the program being implemented swiftly, but measures are being carefully devised which will assure that the funds will be spent wisely and with maximum return to the taxpayers.

"I am also pleased to note from today's session that the departments involved are spreading the word about this economic development program by holding workshops around the Commonwealth and mailing out thousands of loan application forms and instructional manuals in an effort to stimulate maximum participation and maximum economic activity."

Birth retires after 36 years with Penn State

UNIVERSITY PARK — A. Kermit Birth retired Jan. 1 as professor emeritus of Agricultural Economics Extension at Penn State University. After 36 years as a poultry and egg marketing specialist, Birth plans to stay active and continue to write articles for the industry. "My most frustrating experience during retirement will be what not to do," Birth says.

During his career, Birth has developed and conducted numerous educational programs for poultry producers, wholesalers, retailers and consumers. He has studied the marketing of eggs and poultry products with an emphasis on improving quality, such as reducing shell damage. Birth has been instrumental in developing a classification system for identifying causes of egg shell damage.

He has also assisted in developing a computerized broiler management information system for integrated broiler production and marketing businesses to help management in the changing poultry industry.

Kermit Birth

Early in his career, Birth created a poultry merchandising program for retail meat managers. For 36 years, he has helped develop educational poultry exhibits for the Pennsylvania Farm Show. Birth has published a Poultry Marketing Information newsletter for 35 years, emphasizing economics in the industry. He has had articles published in industry magazines in the United States, South America and Central America.

Birth is active in the Extension Professors Association, Epsilon Sigma Phi, American Agricultural Economics Association, the Poultry Science Association and the Pennsylvania Poultry Federation. He has served as advisor to the Pennsylvania Egg Marketing Association and is a member of Gamma Sigma Delta.

Birth received his bachelor of science degree in agricultural education from Penn State. He earned a master of science degree in agricultural economics, also from Penn State.

ASCS offers land measurement services

LEESPORT — To assure farmers that they are in complaince with the 1985 acreage reduction requirements and eligible for farm program benefits, the Agriucultural Stabilization and Conservation Service provides pre-measurement and other land measurement services.

At the request of the producer, the agency will stake and measure any type of acreage, or portions thereof. "To be certain that program requirements are met, farmers are required to plant within the stakes that are placed when the land is pre-measured," said county ASCS official Donald Lutz, "and report their crop acreages to our office after planting."

He said pre-measurement is important in helping farmers plan the amount of land to devote to the acreage conservation reserve (ACR) and planted acreages of the program crops. The ACR is cropland removed from production and put into conserving uses under the 1985 acreage reduction programs. The programs require farmers to reduce their 1985 feed grain and extra long staple cotton acres by 10 percent; wheat and upland cotton by 30 percent; and rice by 35 percent, according to Lutz.

To be eligible for price support loans, target prices and other program benefits, Lutz said producers must certify actual planted acreages.

Other ASCS producer services include measuring total cropland, field or subdivisions to be planted and land areas for other purposes. Fees vary, based on the type of service rendered.

In order to schedule pre-meaurement service requests on a timely basis, farmers are encouraged to apply early.

CLINTON COUNTY DHIA
December, 1984

LOCK HAVEN – The top herd in the Clinton County DHIA for December is owned by Paul L Courter, Mill Hall, while the cow completing the highest lactation was owned by Terry & Deb Dickey, Mill Hall

The top herd of registered Holsteins completed the month with a Rolling Herd Average of 18,004 pounds of milk per cow yielding 693 pounds of butterfat

Other top herds were

– Anthony & Caroline Graine, Mill Hall 18,581 pounds of milk, 673 pounds of butterfat

– Tom and Grace Nicholas, Loganton, 16,899 pounds of milk, 662 pounds of butterfat

– Richard L Schenck, Mill Hall, 17,313 pounds of milk, 659 pounds of butterfat

The cow completing the highest lactation of 305 days or less was Best, a 5 yr 4 mo old Holstein owned by Terry & Deb Dickey, Mill Hall Best produced 22,320 pounds of milk testing at 4 1 percent, yielding 918 pounds of butterfat in 305 days

Other top producing cows were

– Jem, owned by Richard L Schenck, Mill Hall 21 175 pounds of milk, 4 1 percent 865 pounds of butterfat

– #211, owned by Paul Dotterer, Mill Hall, 20,249 pounds of milk 4 2 percent 845 pounds of butterfat

– Trudy, owned by Harry A Schenck, Mill Hall 19 669 pounds of milk, 4 2 percent, 817 pounds of butterfat

– Phylss, owned by Richard L Schenck, Mill Hall 19 427 pounds of milk 4 1 percent, 804 pounds of butterfat

– Lacy, owned by Richard L Schenck, Mill Hall Lacy pounds of milk, 4 0 percent, 788 pounds of butterfat

– #32, owned by Paul Dotterer, Mill Hall, 19 097 pounds of milk 4 1 percent, 780 pounds of butterfat

– Pacemaker, owned by Terry & Deb Dickey, Mill Hall 18,184 pounds of milk 4 2 percent, 764 pounds of butterfat

– Polly, owned by Paul L Courter, Mill Hall 18 034 pounds of milk 4 2 percent 762 pounds of butterfat

500 SERIES Bobcat

540-Air Cooled Gas
543-Liquid Cooled Diesel

Compact & Powerful, 800 lb. Operating Capacity

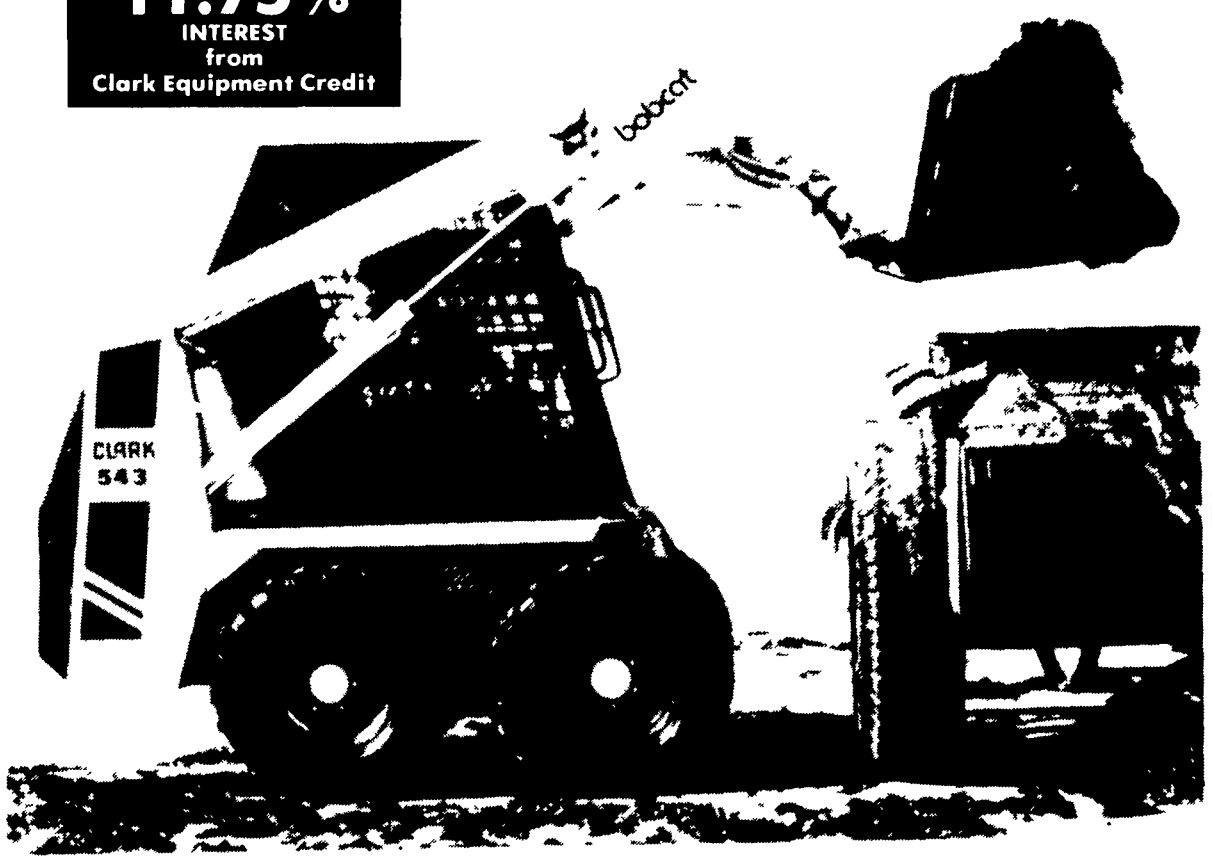
COMPARE THE FEATURES:

☑ PERFORMANCE
800 lb capacity with dump reach up to 32 When you work a Bobcat you'll feel the power at the wheels for manuverability and stability throughout full load cycles

☑ SERVICABILITY
Tip up rollover protection structure for easier accessability to hydrostatic components & steering linkage 3/8" steel rear door on pin hinges makes routine maintenance a snap bigger batteries and starters dual element air cleaners

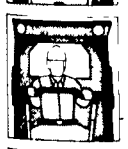
☑ SAFETY

11.75% INTEREST from Clark Equipment Credit

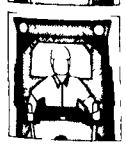


EXCITING NEW CONCEPT FOR SAFETY & COMFORT
"THE SEAT BAR"

Multi pur pose padded seat bar is in place at top of cab When operator is seated he fastens seat belt before pulling down seat bar Rear window serves as emergency exit if necessary



Seat bar allows adequate body clearance for range of operator sizes Bar is quickly easily pulled down by hand and secured at waist level providing additional restraint protection that prevents operator from falling forward



With bar in place, spring lock is disengaged activating foot pedals which operate loader hydraulics Foot pedals are locked when bar is in UP position, preventing lift arms from moving

USDA sets aside farmers' FmHA debt

WASHINGTON – U.S. Department of Agriculture officials approved farm debt set asides for 2,669 Farmers Home Administration borrowers through the first week of December, Charles W. Shuman, administrator of the rural loan agency said.

"In addition, we are helping more than 8,000 farm borrowers with our regular forms of servicing assistance such as rescheduling and reamortizing loans without needing to set aside part of the debt," Shuman said.

The set asides are part of the President's farm credit initiatives announced in September to assist farmers undergoing severe financial difficulty. For qualifying farmers, the Farmers Home Administration can set aside for five years without interest up to 25 percent of their Farmers Home Administration debt or $200,000, whichever is less, if that will restore a positive cash flow.

Shuman said an informal survey of 42 states showed that about 80,000 of the agency's borrowers have requested interviews at county offices to determine if they are eligible for assistance under the farm credit initiatives.

The survey also showed that 109 loans of non-Farmers Home Administration borrowers have been guaranteed by the agency after the private lenders wrote off enough of the debt to achieve a positive cash flow in the borrower's operation.

The agency has approved 45 contracts to provide additional financial and farm management counseling services to farm borrowers at the county level.

Elysburg farm family runnersup in contest

CAMP HILL – A Northumberland County farm family, George and Christine Richard of R1 Elysburg, has been presented an award for outstanding young farmers by the American Farm Bureau Federation, a general farm organization.

The federation, conducting its 66th annual meeting in Honolulu, Hawaii, recently, named the Richard family one of three runners-up in its Young Farmers and Ranchers competition. Three top award winners were also selected.

The Richard family attended the American Farm Bureau convention for the contest as a result of having been named the "Outstanding Young Farm Couple" by the Pennsylvania Farmers Association (PFA) at their annual meeting last November.

PFA is a voluntary, statewide farm organization which represents over 22,800 farm families and is affiliated with the 3.3 million-member American Farm Bureau Federation.

The Richard family raises hogs, corn, small grains, soybeans and sunflowers on a 1,100 acre operation. Since Richard began farming eight years ago by renting land and equipment from his father, he has purchased 110 acres, rented the rest, and expanded the hog finishing operation to 850-head per year, up from 700-head.

Richard is a graduate of Penn State University with a B.S. degree in agronomy. He has served as chairman of the policy development and membership committees of the Northumberland County Farmers' Association, and is vice-president of that organization's board of directors. He received Northumberland County's Soil Conservation Service's Farmer of the Year Award in 1983. The Richards have also served on PFA's State Young Farm Couples Committee. They are the parents of two children.

Bedell to chair House ag subcommittee

WASHINGTON – Congressman Berkley Bedell, D-Iowa, has become chairman of the House Agriculture Subcommittee on Department Operations, Research and Foreign Agriculture.

The subcommittee has wide jurisdiction over the operation of the U.S. Department of Agriculture and the handling of farm programs. It also has authority over agriculture research programs, export credit programs and agriculture exports generally.

"I'm excited to have this opportunity to play such an important role in the formulation and operation of agriculture policy," Bedell said. "I look forward to this new challenge, and I intend to work as I did in the Small Business Subcommittee to make sure federal programs are managed efficiently. I also intend to work hard to help encourage agriculture exports."

Bedell was selected as chairman by Democratic members of the House Agriculture Committee in their organizational meeting. Bedell also will be a member of two other Agriculture subcommittees: Livestock, Dairy, and Poultry; and Wheat, Soybeans and Feed Grains.

Because of its broad authority over USDA operations, the subcommittee Bedell will chair is one of the most important in the Agriculture Committee. The subcommittee will have a key role in writing the research and agriculture trade provisions of the 1985 Farm Bill, and will monitor USDA's management of the bill after it becomes law.

"I'm very concerned about the economic situation in agriculture," Bedell said. "This new position gives me a greater opportunity to help shape the direction of agriculture policy."

Md. appoints soil conservation coordinators

ANNAPOLIS – Secretary of Agriculture, Wayne A. Cawley, Jr., has announced the appointment of three soil conservation area coordinators in furtherance of the Department's Chesapeake Bay initiatives.

Dan Bard, previously district manager for the Frederick and Catoctin Districts, is the coordinator for Western Maryland. He will be based at the district office in Frederick and will serve the Allegany, Carroll, Catoctin, Frederick, Garrett, Howard, Montgomery, and Washington Districts.

Jim Voss, former director of ASCS in Maryland, will operate out of the MDA office in Annapolis. He will serve Central and Southern Maryland including Anne Arundel, Baltimore, Calvert, Cecil, Charles, Harford, Prince George's, and St. Mary's districts.

Mary Ann Skilling, a former Kent district manager, will serve the Eastern Shore and will be stationed as the Caroline District office. Her territory includes Caroline, Kent, Dorchester, Queen Anne's, Talbot, Wicomico, Worcester, and Somerset Counties.

Area coordinators assist with the implementation of the Department's soil and water conservation programs within the State's twenty-four Soil Conservation Districts. Their principal responsibilities relate to the performance of administrative and liaison work for an assigned region of the State

According to Mr. Cawley the three are well qualified, both educationally and professionally, for their assigned responsibilities. "This should enable agriculture to move rapidly ahead in its efforts to clean up the Bay. We are indeed fortunate to have acquired the services of thee such highly qualified persons," Cawley said.

Warm-Season Grasses What and How?

Warm-season perennial grasses such as switchgrass and the bluestems are not new to the Northeast. According to Dr. G.A. Jung of the U.S. Regional Pasture Research Lab, who has spearheaded recent research on these species, these grasses were widespread in the northeast before European settlers arrived. So why all the fuss over them now?

First of all they're known to be productive in July and August at the time cool season grasses are normally non-productive. They've also had the reputation among many cattlemen as being weeds. That's because through natural selection some of those early types became well adapted to our environment. And since they give the appearance under natural conditions as coarse, stiff-stalked grasses, they leave the impression they're low yielding, unpalatable to livestock and low in quality.

But research by Dr. Jung and associates over the past several years has proven that those earlier impressions just aren't right. In fact they've shown that these grasses are:

(1) highly productive from mid-June to the end of August with excellent tolerance of drought and high temperatures.

(2) high in dry matter digestability and intake at the vegetative growth stages. But, as is true with cool season grasses, they decline in quality as maturity advances.

(3) highly efficient users of water and very efficient users of N and P.

It has also been shown that these grasses are probably best used for pasture and the forage is better utilized by beef cattle than by sheep.

The warm-season grasses also get high marks from the Soil Conservation Service as stabilization plants on strip mine spoil and other critical areas. Once established they do well on a wide variety of soils from moderately deep and deep to rocky soils. For example switchgrass, a sod-forming grass, is tolerant of somewhat dry, to poorly drained soils but does poorly on shallow, ver dry sites. The bunch type bluestems, on the other hand, seem to tolerate low rainfall conditions and are often found on droughty sites.

Blackwell Switchgrass

Of the warm-season grasses grown for forage, switchgrass has probably gotten the most attention in Jung's research her in the Northeast. It has included variety comparison, no-till establishment, lime and fertilizer studies and grazing trails.

While other selections are getting attention, to-date the variety Blackwell appears best suited to the Northeast. But if you're a cattleman and you get serious about warm season grasses in your forage program don't overlook the Bluestems and Indiangrass. Switchgrass is ready to graze earlier than either Bluestem or Indiangrass. But the latter 2 may actually be higher in quality.

Getting Stands

While the potential of switchgrass and other grasses for mid-summer grazing has been determined, establishment has been both slow and inconsistent. No-till seeding trials showed that switchgrass varieties and seed lots vary in amounts of seed dormancy. To minimize stand establishment problems seedins must be made before mid-May. When early seedings are made the cold requirements of the seed is met and the seed then germinates when the soil gets warmer.

Seed quality and seed characteristics also make getting good stands a problem. Seeding results are normally better with a grain drill, roller-seeder, or no-till drill than by broadcasting. Switchgrass can be seeded with standard equipment. But for other warm seeded grasses unless debeared they must be seeded with special equipment. Blackwell switchgrass in particular shows tolerance to atrazine. Thus, when pure plantings of Blackwell are made, and annual grasses and other weeds are expected to be a problem, the seeded area can be treated with two pounds per acre of atrazine to control competition from these other plants.

Jung's research and experiences by several growers who have used these grasses successfully suggest several practices to assure good results. For example, don't put more than 25 percent of your available pasture into warm-season grasses. You may get better seasonal distribution of pasture by using more than one warm-season grass. But don't mix them.

Lime, phosphorus and potash requirements for these grasses are nearly the same as for cool-season grasses. But avoid nitrogen applications during the seeding year to minimize weeds and other plant competition. Also, for established stands keep N rates on the light side and don't apply N until after warm-season grasses start spring growth.

Good grazing management is a must, too. Rotational grazing is desirable and over-grazing is disasterous. Always leave about six inches of stubble in the field when you move the cattle.

Yields of warm-season grasses can be high (four to six tons of hay equivalent/A) and this production comes during a short period from late June through August. Thus for cattlemen, the addition of native warm-season grasses to your existing cool-season grass or grass-legumes pasture systems can result in more evenly distributed forage production over the grazing season. They will also enable beef producers to develop a grazing system that better meets the nutritional needs of beef cattle during July and August.

Comments requested on turkey inspection proposal

WASHINGTON – The U.S. Department of Agriculture has extended the public comment period on its Nov. 8 proposal for a new slaughter inspection system for turkeys.

According to Donald L. Houston, administrator of USDA's Food Safety and Inspection Service, the comment period will end Feb 21 rather than Jan. 7.

"Since the turkey industry is very busy during the holiday season, we have granted a request to extend the comment period on the proposal," said Houston. "The extra 45 days will allow interested parties sufficient time to study the proposal and to develop comments and supporting data."

The proposal would establish a voluntary and alternate method of inspecting turkeys after slaughter. The method–known as the "new turkey inspection system"--is similar to one now in effect for chickens.

Comments on the proposal should be sent, in duplicate to: FSIS Hearing Clerk, USDA, Room 2637-South, Washington, D C 20250.

A notice of this action appears in the Jan. 3 Federal Register.

Computer feeders emerge as latest dairy innovation

By George F. W. Haenlein
University of Delaware

One of the newest technologies to be applied to dairy cattle management is the computer feeder. These feeders are designed to provide cows individually specified portions of their daily grain ration. Several companies now make and market these feeders, including DeLaval, Boumatic, Surge, Farmtronix, Westfalia. And you can expect to see more soon.

Over the years the trend toward larger dairy herds has led to group feeding. With fewer animals, especially in the stanchion barn, cows were usually fed grain individually while being milked, so a producer could control the amount each animal got. Roughage (either pasture, silage and/or hay) was fed mostly free-choice, often outside.

With larger herds, producers have tended to switch from stanchions to milking parlors. This practice is more labor efficient but it reduces the time available for cows to eat their grain. High producing cows are especially hard-pressed to eat the large amounts of grain they need without slowing down the milking process.

All-in-one or total mixed rations were developed to overcome this problem. Roughages and grains are mixed in a balanced ration and offered to the cows essentially free-choice. Unfortunately, this practice results in overfeeding low producers within the group, and it still fails to meet the needs of high producers. Ideally, each cow should get what she requires as an individual, and a record should be kept of her productivity.

So in the case of total mixed rations, additional ways to supplement the diet of the high producing cow have had to be developed–that is, through partial grain supplementation in the milking parlor. This way cows don't have to eat as much in the parlor, since they also get part of their grain in the outside total mixed ration, so they don't hold up the milking process. Still, it is difficult to control amounts actually eaten and feed is usually left for the low producers to overeat.

Another attempt to supplement the high producing cow more properly is the magnetic feeder. Magnets are hung around the necks of individual cows as keys to a feed dispenser that provides supplemental grain. Access to the feeder is controlled by who gets a magnet, but the amount of feed each cow gets is not controllable. Some may not eat enough; others can overeat–which causes new problems and inefficiencies.

So we finally come to the computer feeder, which allows totally controlled delivery of even two separate supplemental feeds to any individual cow in the herd. The components of a computer feeder are: one or two feed storage bins and conveyor ducts; a feed dispensing stall; a cow identifying system; a micro computer. Here's how the system works.

Each cow wears a transponder around her neck which transmits electonic signals. The identifying box on the feed dispensing stall picks up the signal and relays it to the microcomputer. If the cow is entitled to feed, a motor in the feed dispenser is activated and feed is dispensed. Once she has reached her predetermined limit, no more feed will be given to her at this moment.

The herdsman can check the computer from his office at any time and see how much feed any cow has eaten to this particular hour, this day, yesterday, for the week, and so on. Thus the computer feeder allows the herdsman to control each grain intake for each cow all the time.

With this system, the grain portion of their diet is usually dispensed to cows in several small meals per day so that intake, rumen fermentation and digestion is spread more evenly over a 24-hour period and so is more efficient.

A side feature of computer feeders is that with the printout of the day's activities, one can see not only how much each cow is eating but also which cows are not eating part of their allotment. This makes it possible to detect potential problems early. Otherwise it may be 24 hours after a cow reduced her intake before she's noticed and by then her milk production will also be less. The herdsman can thus treat sick cows sooner, more efficiently and more effectively.

An article in the March 25, 1984 issue of Hoard's Dairyman looked at the cost and returns for investing in a computer feeder. The writer calculated that a reasonable payback time might be 3.5 years with 50 cows or 1.8 years with 400. A daily benefit of two pounds of milk per cow and a 0.1 percent fat increase per cow was assumed.

Based on my own experience with the University of Delaware dairy herd and other herds using computer feeders, I believe the savings will be at least as great, and the payoff period possibly even shorter if there was free-choice grain feeding before. Two additional benefits of this new computer technology are the ability to better put weight back on a cow after she calves and to maintain her peak production longer.

If you're considering investing in computer feeders for your herd, remember that they won't cure all your management problems. You still must stay on top of all those additional cow records the system will generate if you want to get the last possible efficiency by dispensing the right amount of feed to the right cow at the right time. And you still need to test forage to be sure that the proper balance of nutrients is available. This may require changing the feeds offered in response to changing forage test results.

Also remember that this is electronic equipment which needs a good environment in order to operate properly and without breakdown. It's quite a change from the days when dairy farming was mostly a pitchfork operation, to these days of letting computers help us make more money with dairy cows.

We're using these electronic gadgets in our University of Delaware classes and labs now. We're using them to look into the electronic future of the dairy industry with the same astonishment and restrained excitement our children must have felt when they first looked at Star War gadgets not so long ago.

We're also looking to this new technology with a prayerful hope that it will help bring back to the dairy farm those profits which are presently so hard to find.

Woodland management valuable for firewood, wildlife

LEESPORT — "Woodlands can be a valuable source of firewood and provide excellent habitat for wildlife if managed properly," says John Fior of the USDA Soil Conservation Service. Cutting patterns are the key in developing good habitat for wildlife.

It is better to clearcut selected areas in the woodlot than to cut selected trees. Cutting individual trees does not sufficiently alter the habitat to provide additional food and cover for wildlife.

One approach to clearcutting is to clear 25 ft. wide strips along woodland access roads. The firewood is easily removed along access road. An alternative method is to cut small one-quarter acre blocks within the woodlot.

Long, narrow rectangular blocks are preferable to square blocks. Animals are reluctant to enter large open areas where chances of escape from predators are reduced. Rectangular strips approximately 100 ft. by 20 ft. are preferred. These clearings should be spaced at least 100 yards apart.

"Sunlight enters the clearcut areas and promotes the sprouting and fruiting of important food producing trees and shrubs," says Fior. These include trees such as beech, birch, cherry, hickory, maple, oak, poplar, and shrubs such as blackberry, blueberry, serviceberry, grapevine, greenbrier, hawthorn, honeysuckle, sumac, and viburnum.

"Dead snags and mature oaks, hickories, and beech with large crowns and deep cavities should be left as mast trees, den trees, and perch trees," adds Fior. This type of habitat will provide excellent food, cover, and nesting sites for a variety of forest wildlife including bears, racoons, foxes, deer, chipmunks, squirrels, turkeys, grouse, hawks, owls, woodpeckers, bluejays, chickadees, nuthatches, titmice, and many more.

"Clearcutting one area each year will leave food plots in different stages of reforestation and will insure a continuous supply of firewood and optimum habitat for a variety of wildlife," says Fior. Trees selected for firewood should be cut in the spring so that the drying process begins and the wood has time to season before winter," he adds.

The slash remaining from tree tops can be burned, scattered on the plot, or piled in a row in the middle of the plot. Scattering slash on the site provides cover and nesting sites for wildlife. In addition this may discourage excessive browzing by heavy deer populations. Piling slash in the middle of the plot provides a travel lane and escape route for wildlife, but may also encourage heavier deer browzing.

For further information contact the Soil Conservation Service located at the Berks County Agricultural Center in Bern Township.

USDA increases inspection rates

WASHINGTON — Effective Jan. 6, the U.S. Department of Agriculture increased its overtime inspection rates charged to meat and poultry plants from $21.00 to $21.72 per hour.

In addition, the hourly rate for voluntary inspection and certification services increased from $17.96 to $18.60, and the charge for laboratory work from $34.68 to $35.92, according to Donald L. Houston, administrator of USDA's Food Safety and Inspection Service.

"On Sept. 30, the agency increased the rates for overtime inspection, identification, certification and laboratory services to cover the cost of providing these services in fiscal year 1985," said Houston. "That increase did not include the 3.5 percent cost-of-living raise for federal employees, which is in effect this month. The new rates are based on that pay raise."

Under federal meat and poultry inspection laws, USDA must assume all inspection costs during routine working hours in plants producing meat and poultry products for interstate or foreign commerce. However, USDA is authorized to charge plants for all mandatory inspection services exceeding eight hours per day or 40 hours per week, all laboratory work and all voluntary inspection and certification services.

The final rule was published in the Jan. 7 Federal Register.

Making better breeding program decisions

HONESDALE – Dairymen are constantly being told about P D Milk (Predicted Difference Milk), P D Fat (Predicted Difference Butterfat), P D $ (Predicted Difference Dollar Value, P D T (Predicted Difference Type), T P I (Total Performance Index) and % R P T (Percent Repeatability), any time they talk to an artificial insemination technician or salesman, any time they read a breed publication, dairy-oriented newspaper or dairy publication.

All of these breeding terms represent information that should be used by today's dairyman when making breeding program decisions for a dairy herd.

Dairymen in Wayne County and across the state are now in the process of rebreeding their fall-freshening cows, says John Creighton, county agent. This is a very important job, especially since the future profitability of that dairy herd will depend on getting the cows bred and ready to calve at a similar time the next year.

When a dairyman picks up an artificial insemination sire directory or some other sire book, he will see a whole page of numbers, a number of bar graphs referring to milk and butterfat production of daughters of a bull, the bull's strong and weak points in reference to siring type patterns and much more.

The most important decision for a dairyman to make is to honestly identify the "weak-link" or overall weakness of his herd breeding program. This weakness can be a variety of problems such as low milk production, low butterfat test, poor feet and legs, poorly attached and poorly shaped udders and cows that are frail or weak and unable to milk at a reasonably high level of production for a given period of time.

Once the herd's weakness has been identified, the dairyman can then start to make improvements by selecting proven bulls that will sire offspring that have good functional, well-attached and well-shaped udders, have strong feet and legs, acceptable body size and capacity and are cows strong enough to endure high levels of milk production over a period of time. Cows that have these desirable traits will usually stay in the herd longer and will show a greater level of productivity and profitability over a lifetime.

All of the artificial insemination organizations and most of the purebred breed organizations have trained evaluators to help dairymen with their corrective breeding program. They offer programs such as linear type trait appraisal, genetic mating evaluation systems and other corrective breeding programs.

In most cases, progress toward improving or changing a given trait can be realized in one generation. Some traits will take more than one generation in order to see or measure an improvement.

The use of the very best proven bulls for milk production, butterfat, percent butterfat test, type traits and plus dollar value will offer the dairyman a chance to improve his herd, which is his main source of income, whether that income is from the sale of milk or the sale of surplus breeding stock as extra income.

The practice of using young, well-bred sires, available through artificial insemination organizations, on some of the cows in a dairy herd is a sound breeding program decision. These young sires represent some of the very best dairy genetics that can be offered at the present time to dairymen. These young sires are the sires of the future and must be randomly sampled in dairy herds all over the country in order to determine their eventual genetic contribution to the dairy industry in regards to their daughter's milk and butterfat production, butterfat test and overall type traits.

Every dairyman should consider breeding at least ten percent of his herd to young sires in order to help the artificial insemination organizations quickly obtain a proof on these young sires.

The use of artificial insemination on heifers is a sound breeding practice. Dairymen using this practice have an opportunity to gain a generation of replacements plus make herd progress when using proven bulls noted for "calving ease". Beef bulls will "freshen out" heifers but cannot really contribute much to improve milk production or type traits in a herd.

In some heifer raising facilities, the use of artificial insemination on heifers means more time and labor needed to "catch" heifers in heat. This extra time and labor is well-spent when the results of artificial insemination on heifers are evaluated.

A good herd breeding program has five basic parts. These are: 1. an honest evaluation of the weakness' in a dairy herd; 2. an effort to identify corrective breeding services available from artificial insemination and breed organizations to improve a dairy herd; 3. actual useage of A.I. proven bulls and young, well-bred bulls to make improvements in milk and butterfat production, butterfat test, dollar value and type traits; 4. the use of artificial insemination and "calving ease" bulls on heifers to continue a strong breeding program and make genetic progress; and 5. continued evaluation of the breeding program through culling of poor animals and the selection of better animals as the genetic base of the herd for future years.

Farm Drainage doesn't cost... It pays!

It pays with
- Improved Land Use and Efficiency
- Better Soil Conservation
- Deeper Root Development
- Increased Crop Yield
- Longer Growing Seasons
- Improved Plant Quality
- Better Livestock Farming

PENNSYLVANIA CHAPTER LICA

Hall joins Sire Power

TUNKHANNOCK – Denise L. Hall joins the staff of Sire Power, Inc. as marketing Promotion Coordinator, according to R. Rinell Vincent, Sire Power's Director of Marketing.

Denise's primary responsibilities include: constructing the Sire Directories and supplements and managing their distribution, developing the annual calendars, and handling local advertising. She will also handle and create new promotional items.

In addition, the displays for member area and District Sales Managers' areas will be distributed by Denise. She will also be responsible for coordinating tours and handling Marketing Research projects.

Denise brings proven ability in the A.I. industry to her new position. Previously Denise worked as an Administrative Assistant for World-Wide Sires which represents the ten U.S. A.I. Cooperatives in Europe, Asia, Africa, and the Middle East for marketing semen.

Denise is a May 1983 graduate of Iowa State University at Ames, with a Bachelor of Science Degree in Dairy Science. While at college she served as President and Secretary of the Dairy Club and was on many committees for dairy-related events.

Denise grew up on the family's registered Holstein dairy farm in Brooklyn, Iowa. Denise has relocated to Tunkhannock.

SOME THINGS ARE CHANGING BUT HOOBER'S OLD-FASHIONED SERVICE IS STILL THE SAME

Floyd Huber receives Star Farmer degree

BY SUZANNE KEENE

NEW HOLLAND — Floyd Huber of East Earl recently received the Star Farmer degree in recognition of his outstanding achievements in agriculture and the FFA program.

Earning this degree marks the Garden Spot High School junior as one of Lancaster County's two top FFA'ers. The degree also means $75 toward a trip to the National FFA Convention in November and a pin for his FFA jacket.

Huber has been active in the Grassland FFA chapter since his freshman year in high school, and served as second vice president this past year. During his three years in FFA he has completed projects in swine, heifer calf, chain calf and bred guilts.

Huber has also participated in FFA livestock judging contests, placing eighth at FFA Activities Week and earning an invitation to compete in the national contest in Richmond, Va. There, Huber's team placed third in swine and beef judging.

Long before he was old enough to enter the FFA program Huber began building his livestock knowledge in 4-H. He is a member of the New Holland baby beef and community clubs.

During his second year in 4-H Huber tackled a swine project, starting him on journey that could lead to a career in raising hogs. William Fisher was leading the swine project at that time and Huber gives Fisher credit for teaching him much of what he knows about hogs.

Since that beginning six years ago, Huber has learned quite a bit about hog production. Now, he says, other students come to him for help in preparing their animals for shows, and he gladly lends his aid when asked.

Huber and his brother Delvin have formed a partnership and together raised 44 market hogs last year. Since the Hubers do not live on a farm, Floyd and Delvin keep their hogs on a neighbor's farm. Floyd takes care of the morning feeding while Delvin feeds the hogs after school.

The money he earns from his hogs goes right back into buying more. At first, Huber said, he purchased his market hogs from neighbors, but now he gets most of them from a Maryland producer.

Huber said he selected hogs as a project because they are one of the easiest animals to prepare for a show. "Hogs are next to the easiest thing to raise," he says.

At the beginning of the year, Huber said, his goal had been to raise 100 hogs. And, although he fell short of that goal, he plans to meet it this year.

This week Huber started a new job as a farm hand on a hog farm in Morgantown. He goes to the farm right after class and works until 7 p.m. Previously, Huber worked as a cook at Yoder's Country Market, but he says he is much more enthusiastic about his new job as a farm hand.

In addition to his hogs, Huber owns a heifer calf and a chain calf which he keeps at another neighbor's farm. The neightbor, Merv Martin, takes care of the heifer calf, and gets half of the milk money for his efforts.

When he's not busy with his FFA and livestock activities, Huber volunteers for the New Holland ambulance, and participates in the Weaverland Youth Group and baseball team. The son of Ivan and Fern Huber, Floyd has two brothers and two sisters.

His two brothers have both shown an interest in agriculture and his older sister, Linda, has already started in the 4-H

(Turn to Page F2)

Learning to change a tractor's oil filter is just part of the agricultural training Floyd Huber is getting during his years at Garden Spot High School.

Floyd Huber, East Earl, recently received the Star Farmer degree.

Star FFA'er Dan Martin takes a shine to dairying

BY JACK HUBLEY

LITITZ — Lancaster County dairyman Marvin Witmer doesn't have to set his alarm clock anymore. Not since a young Warwick High School FFA member named Daniel Martin started lending a hand at Witmer's dairy and beef farm east of Lititz last summer.

Every morning at 4:45 a.m. Dan arrives at the Witmer farm to help milk the herd of 56 Holsteins, before leaving for home at 7 o'clock to get ready for school. Actually Dan's feet hit the floor at 4 a.m., which gives him just enough time to tend to the needs of his Brown Swiss heifer and a pair of sheep that he keeps in his grandfather's barn not far from home.

It's this kind of drive that has propelled Dan Martin to the top amid a field of 1,100 Lancaster County FFA members. For his accomplishments in the FFA program, as well as his farming experience outside of school, Martin has received Lancaster County's Star Agribusiness award, one of only two county Star awards issued each year.

After earning their chapter Greenhand and chapter Farmer laurels, county FFA'ers then contend for the Red Rose degree. This year 59 Red Rose degrees were granted, with the two top Red Rose recipients being named Star Farmer and Star Agribusinessman. Martin shares the Star spotlight with Star Farmer, Floyd Huber, of Garden Spot High School in New Holland.

"Whatever he puts his mind to, he does a good job," remarks Dan's vo-ag instructor, Sonya Shaner, who notes that, as a ninth grader, Dan placed second in the state meats judging competition at Penn State while competing against older, more experienced FFA'ers. This feat enabled him to represent Pennsylvania at the national competition in Kansas City. As a team, the Pa. contingent took home a bronze medal.

Also in his freshman year, Dan was named Star Greenhand, and Star Chapter Farmer as a sophomore.

What makes his accomplishments even more remarkable is the fact that Dan is the only farmer in the family. The son of James and Lucille Martin of Lititz, Dan grew up with no close relatives in

(Turn to Page F3)

A junior at Warwick High School in Lititz, Dan works for dairy farmer Marvin Witmer before and after school. He still finds time to care for his own livestock and participate in FFA and church activities.

The nucleus of a future dairy farm: Lancaster County Star Agribusinessman Dan Martin and his "star" Brown Swiss heifer, Cinnamon.

Mid-Atlantic Direct Marketing Conf. set for Feb. 19-21

The 1985 Mid-Atlantic Direct Marketing Conference for roadside market, pick-your-own farmers' market operators, and others involved and/or interested in farmer-to-consumer direct marketing, for which New Jersey will be the host state, will be held Feb. 19-21, at the Cherry Hill Inn and Conference Center in Camden County, New Jersey, just across the Delaware River from Philadelphia.

Sponsors are the Cooperative Extension Services in Delaware, Maryland, New Jersey, and Pennsylvania in cooperation with Delaware Direct Marketing Association, Maryland Farm Market Association, New Jersey Direct Marketing Association Committee, Pennsylvania Farmers' Milk Jugging Association, Retail Farm Markets Division - Pennsylvania Farmers Association, and the New Jersey and Pennsylvania Departments of Agriculture.

This is the 18th year for the conference in several of the states involved and represents the third combined effort of the four states.

Beginning with a tour of four New Jersey direct marketing outlets on Feb. 19, the central themes of the conference program will relate to "Advertising for Profit" and "Management." Presentors will include professional educators and agency representatives with a balance of market operators. An important part of the conference will be commercial exhibits.

For more information on the Conference contact Conference chairman, M.S. Fabian, Cook College, Rutgers, The State University, phone: 201-932-9171. In Pa. contact L.L. Yager, CES, Penn State University, 1135 Chambersburg Rd., Gettysburg, PA 17325 phone: 717-334-6271.

Sheep, lamb numbers down

HARRISBURG – All sheep and lambs on Pennsylvania's 4,900 sheep farms January 1, 1985 totaled 88,000, down 15 percent from a year earlier, according to the Pennsylvania Crop and Livestock Reporting Service. This is a record low sheep inventory for Pennsylvania.

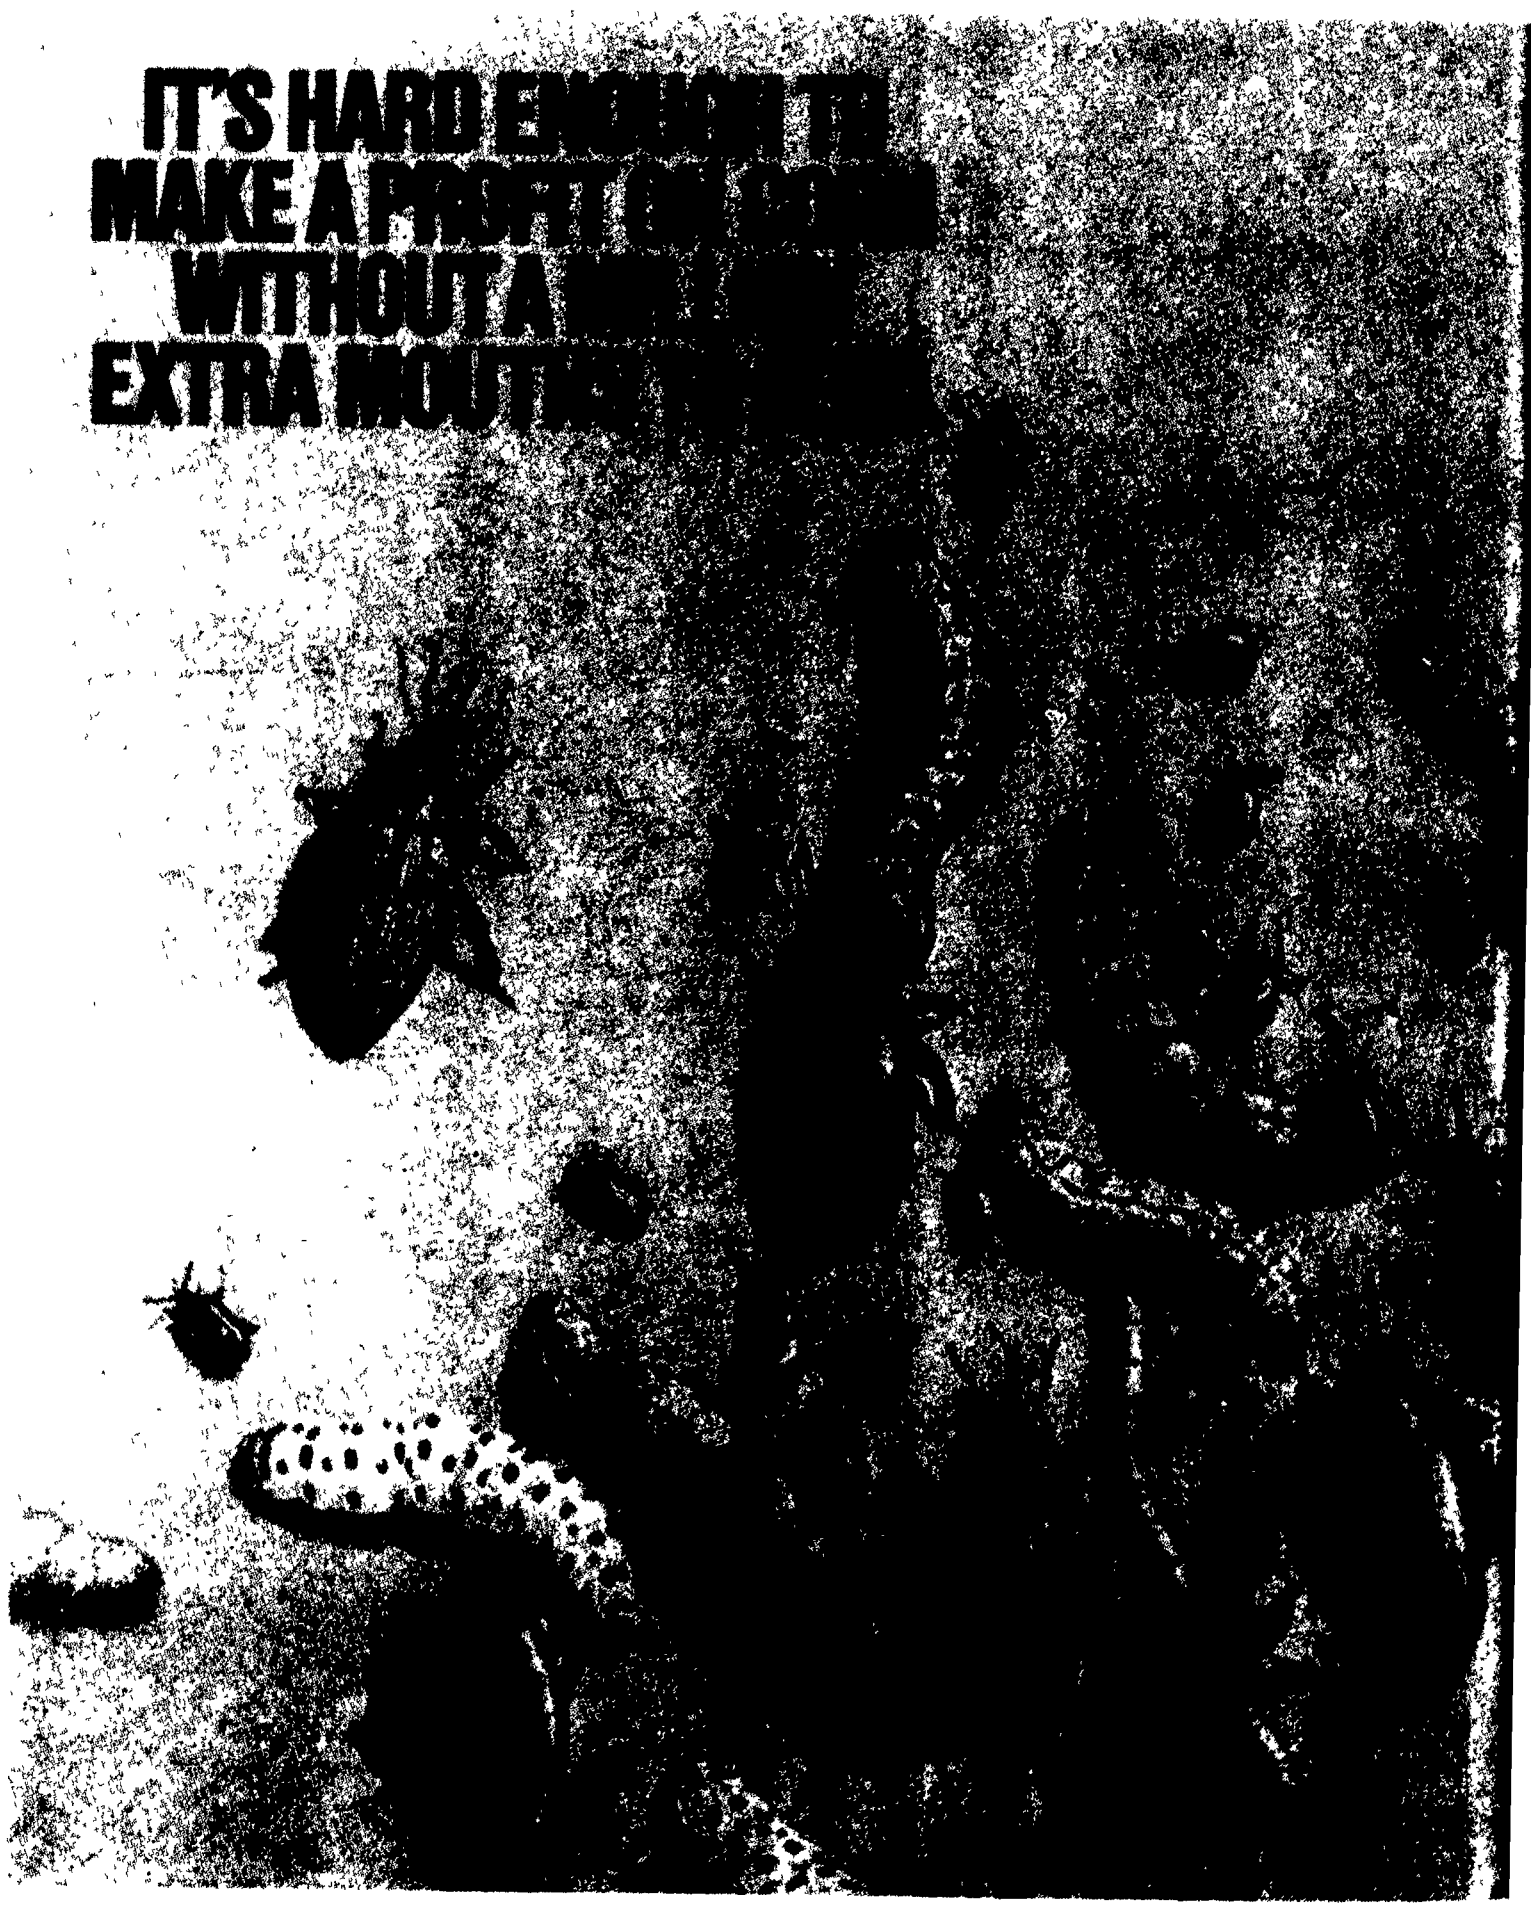
Of the total, 67,000 were ewes one year and older, 5,000 head were rams and wethers one year and older, 12,000 were ewe lambs, and 4,000 were ram and whether lambs. The inventory value of all sheep and lambs was $5.9 million, down 11 percent from January 1, 1984. Average value per head increased $3.00 to $67.00 per head.

The 1984 Pennsylvania lamb crop was 80,000 head, the same as 1983. Breeding ewes one year old and older on January 1, 1984 were 77,000 compared with 75,000 a year earlier. Lambs saved per 100 ewes one year old and older was 104 in 1984 compared with 107 in 1983.

United States sheep and lamb total inventory is estimated at 10.4 million head, down nine percent form 11.5 million a year earlier. This is the lowest inventory on record.

The value of all sheep and lambs on hand January 1, totaled $638 million, up seven percent from a year ago. The average value per head was $61.10, up $9.00 from last year. Stock sheep inventory was 8.85 million head, nine percent below January 1, 1984 and the lowest number since estimates were started in 1867. Ewes one year old and older, at 7.23 million head, were down eight percent. Ewe lambs declined 18 percent to 1.02 million. Wether and ram lambs were 11 percent lower than last year.

Nationally, the 1984 lamb crop of 7.77 million head declined five percent from the 1983 lamb crop. Breeding ewes one year old and older on January 1, 1984, were down six percent from the previous year. The 1984 lambing rate was 99 lambs per 100 ewes one year old and older, compared with 98 in 1983 and 97 in 1982.



Floyd Huber

(Continued from Page F1)

program. However, his three-year-old sister, Fern Louise, has yet to show any strong interest in any particular career, Huber says with a smile.

For now, Huber is busy thinking about his future plans. He is thinking about attending college to major in animal husbandry or animal production. At this time his top college choices are Alfred University in New York or Penn State.

And after college Huber says he'd like to work on a hog farm, "get a little money in my pocket," and start a hog farm of his own.

Dan Martin

(Continued from Page F1)

agriculture on either side of his family.

"But he's always loved animals and been interested in the outdoors," explains Mrs. Martin.

Even though his parents were supportive of his agriculture interests from the start, they weren't quite ready to accept his hectic schedule without reservations when he went to work on the Witmer's dairy farm last summer.

"We wondered when he started this job. And we told him that his studies would have to come first," recalls Mrs. Martin. "But he just said,'don't worry, mother'.

"We told him that he has the rest of his life to work," she continues, "but he said, 'It's not work, mom, I love it'."

And love it, he must, to maintain a weekly regimen that reveals precious little leisure time. After helping with the dairy herd, Dan jumps into his 1962 Studebaker and gets home by 7 a.m. to clean up for school. "I don't think I'd have very many friends if I'd go to school right after work," he laughs.

Shortly before 8 a.m. he arrives at school, ready to dig into a full course load of three agriculture courses, English and World Cultures.

At 3 p.m. it's time to head to his grandfather's barn to care for his own stock, and then on to the Witmer farm at 3:45 where he warms up for milking time by feeding Marvin Witmer's 60 head of steers.

After the milkhouse is set up and the calves are fed, Dan and Marvin begin milking and finish at 6:00, after the cows have received their hay.

By 8:30 Dan is under the covers, in preparation for another early start.

By the time the weekend rolls around, it's time to clean the barn where his livestock is kept. Dan also buys feed on Saturdays and cares for his pigs that are kept at the home of friend and fellow FFA member Alex Smith. The two are partners in the swine business and are currently in the process of remodeling Smith's barn and adding new farrowing crates.

Though Dan enjoys working with all species of livestock his first love is dairy farming. So with an eye toward owning a dairy herd someday, he now owns his first heifer, a Brown Swiss that he calls Cinnamon. The young dairyman made his breed choice on the basis of the relatively high butterfat content of Brown Swiss milk, and because he, "just wanted to be a little different."

But before Dan settles down to make a living at dairying, he has some specific goals in mind for the interim. First on the agenda will be his application for the Keystone Degree at the FFA's next mid-winter convention. He also has his sights set on the coveted American Farmer Degree.

Educational plans include a two-year college, preferably with a major in dairy farm management. After graduation Dan hopes to take a job as a dairy farm hired hand, eventually taking over some of the culling and breeding responsibilities.

By the time he reaches 25 to 30, Dan hopes to own, or at least be renting his own dairy farm.

"I think that if I set my heart on it, then I can attain that goal," Dan asserts.

At first glance working into the dairy business may seem to be an unattainable goal these days, especially for those young farmers on the outside looking in. But if the early bird does indeed get what he's looking for, then this energetic young Lancaster County dairyman can look to the future with confidence.

If you grow corn, you are aware of how devastating an insect infestation can be. Corn borers, rootworms, armyworms and more. They all eat into your profits while they get fat on your valuable corn crop.

Furadan® insecticide is labelled for a broad spectrum of corn insects. It is the proven choice at planting time because it controls most of the soil insects that infest corn crops. And it reduces populations of first generation corn borers.

So Furadan will give you a good return on your investment because it protects your corn crop, and increases your yield.

PAFC seeks summer program alumni

HUNTINGDON – The search is on for former scholars of the PAFC Summer Youth Institute.

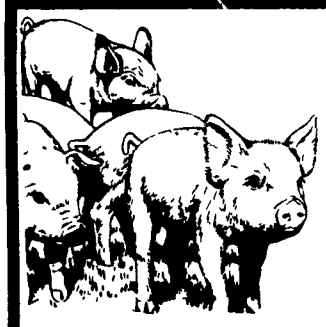
The Pennsylvania Association of Farmer Cooperatives is making an all-out effort to locate alumni of their annual Summer Institute to invite them to join a special celebration.

This year marks the Silver Jubilee Anniversary of the Institute, which has trained over 3,500 Pennsylvania youth in cooperative business principles. The Institute began in 1961. Participants in the program learn how agricultural cooperatives are organized, managed and operated.

The 25th Silver Jubilee celebration will be held on July 8 during the 1985 Summer Institute at Juniata College, Huntingdon, Pa. Special events will include a picnic for alumni and current scholars plus a special address by Henry Schriver, the witty Ohio farmer philosopher.

"These special events provide a perfect opportunity for alumni to become reacquainted with each other and the Summer Institute Program," says Chris Peterson, PAFC Youth Program Director. "It will be very helpful to us as cooperative leaders to know the location of our alumni and gain a sense of our continuing involvement with cooperatives and agriculture."

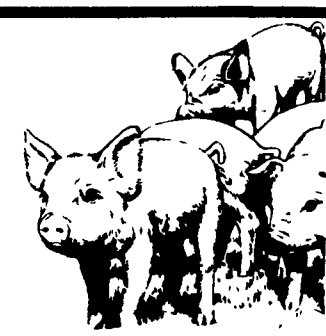
If you or someone you know is an alumnus of the Pennsylvania Association of Farmer Cooperatives Summer Institute, please write or call Peg Luckovich as soon as possible at RD 1, Box 405, Bellefonte, PA, 16823, 814-355-7918. When writing please include your current address.



Farmer Boy Ag

THE SWINE SYSTEMS DESIGNER AND BUILDER

From 50 To 5,000 Sow Complexes

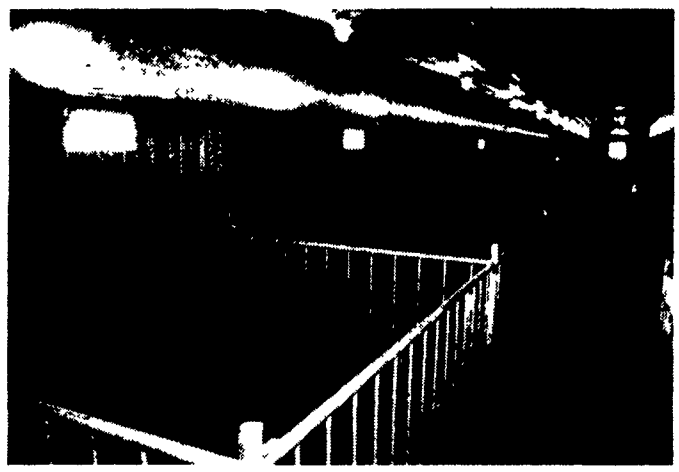


★ *DESIGNED FOR PROFIT*

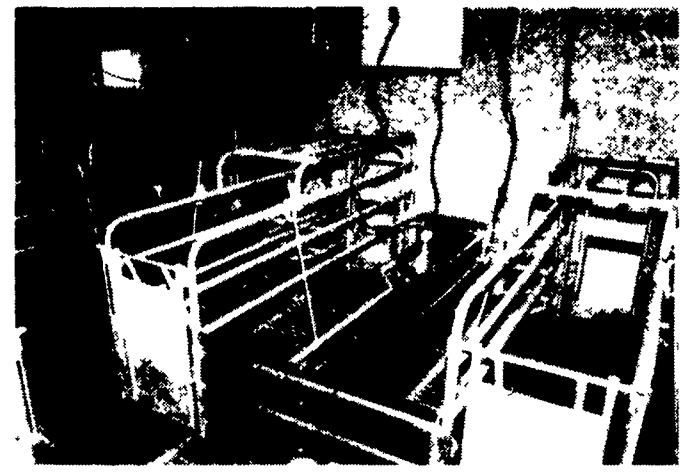
★ *BUILT TO LAST*

Buildings Are Designed For Efficient Management Of Animal Flow And Labor

Gestation Area: Features Hot-Dipped Galvanized Drop Back Stalls

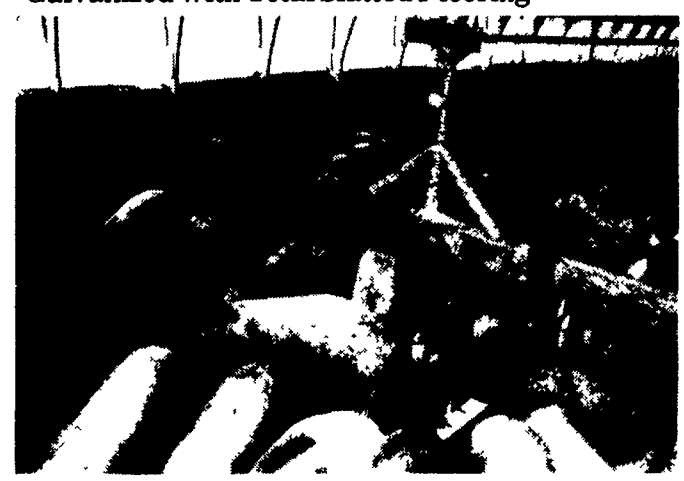


Breeder Area: Sows And Gilts Housed In Stalls In Front Of Boar Pens



Farrow Area: Adjustable Crates, Hot-Dipped Galvanized With Total Slatted Flooring

Nursery Area: Adjustable Feeder, Total Slatted Flooring



Grower & Finisher Area: Partial Or Total Slatted Flooring, Adjustable Feeders
